# RODLESS PNEUMATIC CYLINDERS
SERIES S1

S STRÁNSKÝ A PETRŽÍK

1

The rodless cylinders of the S1 series are particularly useful where there is no space for a standard cylinder. The piston rod does not extend from the cylinder. Thanks to their maximum stroke of up to 6 meters, they can also be used in applications where the use of a conventional cylinder would be impossible. This series uses the proven two-strip principle.
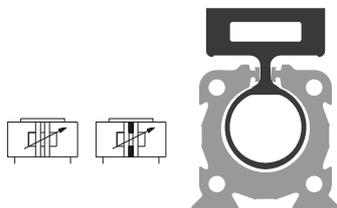

| Working pressure	0,6 MPa
Min. pressure	0,3 MPa
Max. pressure	1,0 MPa
Temp. range	-20°C to +80°C
Working medium	modified compressed air
Carriage speed	min. 20 mm.s^{-1} max. 3 m.s^{-1}

Piston diameter [mm]	16	25	32	40	50
Force at 0,6 MPa [N]	125	250	420	640	1050
Connection	M5	G1/8"	G1/4"	G3/8"	G3/8"
Length of adjustable cushioning [mm]	16,5	25	32,5	41,5	52
Max. stroke [mm]	5000	6000	6000	6000	6000
Stroke tolerance [mm]	+2,5	+2,5	+3,2	+3,2	+3,2

| Piston diameter [mm]		16	25	32	40	50
Weight	**Carriage**					
base - 0 mm of stroke [kg]	standard	0,31	0,75	1,31	2,6	4,79
	medium	-	0,84	1,48	2,91	5,55
	long	-	1,05	1,93	3,8	7,33
100 mm of stroke [kg]		0,104	0,210	0,325	0,555	0,955

Order codes
## Piston diameter 16 mm

A S1 0 0 4 16 0500 M

Carriage		**Left end-cap supply port**		**Right end-cap supply port**		**Piston diameter**		**Stroke**		**Options**	
0	standard	0	no supply port (both chambers supplied from right end cap)	4	rear for both chambers on the right end cap	16	16 mm	xxxx	mm of stroke e.g.: 0500 = stroke 500 mm	M	with magnet
				5	side for both chambers on the right end cap						

Right supply ports:
4 - rear   5 - side

i If you require proximity sensing, please contact our technical department.

Piston diameter 25 to 50 mm

A S1 0 1 1 25 0500 M

Carriage		**Left end-cap supply port**		**Right end-cap supply port**		**Piston diameter**		**Stroke**		**Options**	
0	standard	1	side	1	side	25	25 mm	xxxx	mm of stroke e.g.: 0500 = stroke 500 mm		standard
2	medium	2	bottom	2	bottom	32	32 mm			M	with magnet
3	long	3	rear	3	rear	40	40 mm				
		0	no supply port (both chambers supplied from right end cap)	4	rear for both chambers on the right end cap	50	50 mm				

i If you require proximity sensing, please contact our technical department.

i For long-term and trouble-free operation, we recommend:
1) speed maximum 1 m.s^{-1}
2) use a hydraulic shock absorber if the efficiency of the internal cushioning approaches the limit value
3) if the cylinder is used vertically, the cushioning capacity is reduced by 40%
4) maintain a correct and constant lubrication

Construction / materials
● caps: ø16: zamak ø25-50: die-cast aluminium
● tube: anodized aluminium
● piston: aluminium
● piston guide slide: acetalic resin
● sealings: NBR
● magnet: neodymium

i The pneumatic sealing is achieved through an axial elastomer stripseal reinforced with Kevlar. This system guarantees dimensional stability even with high speeds. The external protection seal consists of a thermoplastic stripseal reinforced with Kevlar.

Permissible static load and stress

Cylinder force F	Static load			Static moment		
	P1	P2	P3	M1	M2	M3

∅	F [N] at 0,6 MPa	P1 [N]	P2 [N]	P3 [N]	Standard carriage [Nm]			Meduim carriage [Nm]			Long carriage [Nm]		
					M1	M2	M3	M1	M2	M3	M1	M2	M3
16	125	100	100	25	5	0,2	0,8	-	-	-	-	-	-
25	250	200	200	50	8	2	3	14	3	5	15	6	9
32	420	250	250	65	9	3	4	15	4	7	28	8	12
40	640	350	350	90	11	9	14	16	14	20	31	27	39
50	1050	500	500	125	19	13	19	29	20	30	52	36	53

A moment is the product of the load (N) and the arm (m), i.e the distance between the centre of gravity of the load and the longitudinal axis of the piston. Please note that in dynamic conditions, the load must be reduced due to effects associated with the speed. Calculation of permissible dynamic stress and verification of internal damping efficiency can be found on page 1-47.
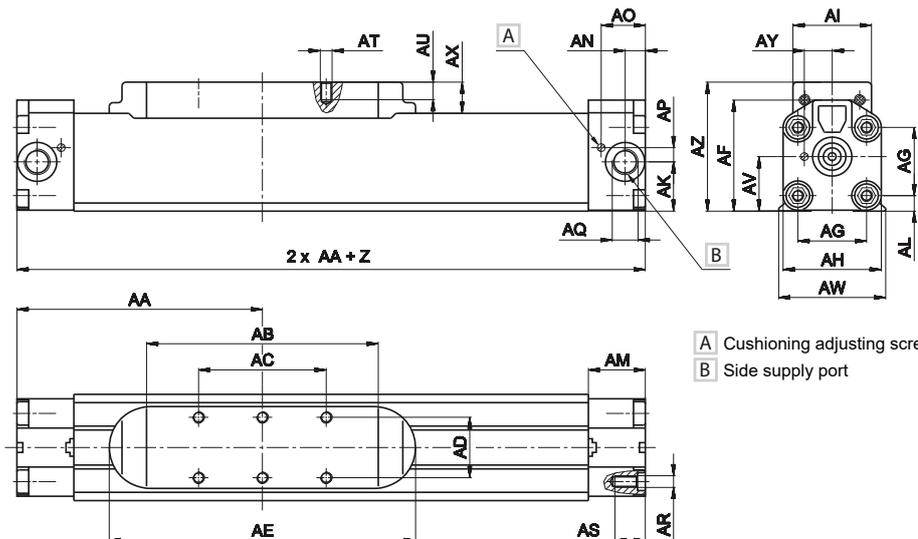

Dimensions
Standard carriage - 6 fixing holes
∅ 16 mm
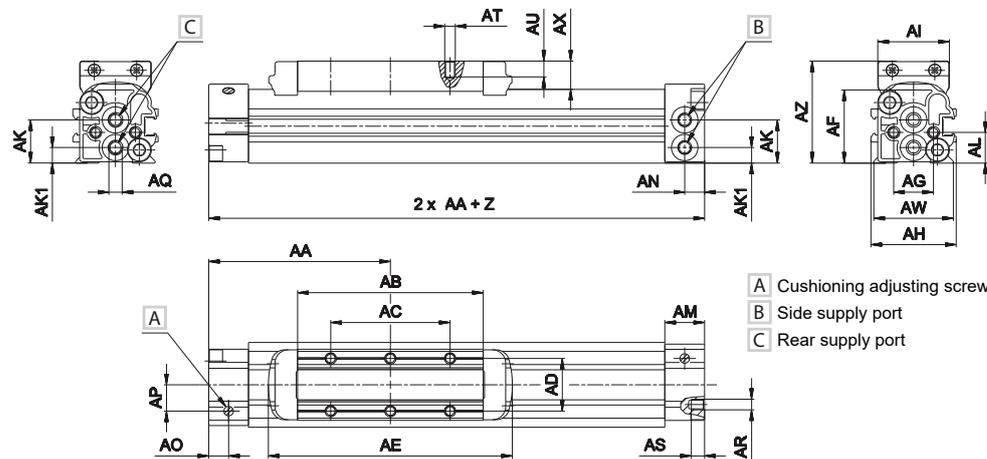

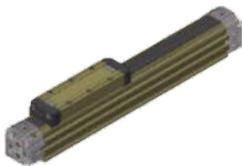

A Cushioning adjusting screw
B Side supply port
C Rear supply port

∅ 25 - 50 mm

Examination and verification of internal cushioning

In a system with moving masses, as in the case of rodless cylinders, it is essential to control the dissipation of the system's kinetc energy as it is brought to a stop. First of all, it is necessary to establish and verify the most suitable method for cushioning the system, in order to avoid the moving mass (carriage with load) striking against the end-caps and compromising the life of the cylinder.

If the point corresponding to a given load and speed lies beneath the appropriate curve, the cushioning is able to absorb the kinetic energy of the system.

Vice versa if the point lies above the curve, the cushioning is not able to absorbe the kinetic energy. In that case you must:

a) decrease the load and mantain the translation speed
b) decrease the speed and mantain the load
c) select a cylinder with a bigger bore or with twin chambers
d) use external hydtŕaulic shock absorber (see page 9-1)

Attention: if the cylinder is mounted vertically, the damping efficiency is reduced by 40%.

Internal cushioning efficiency
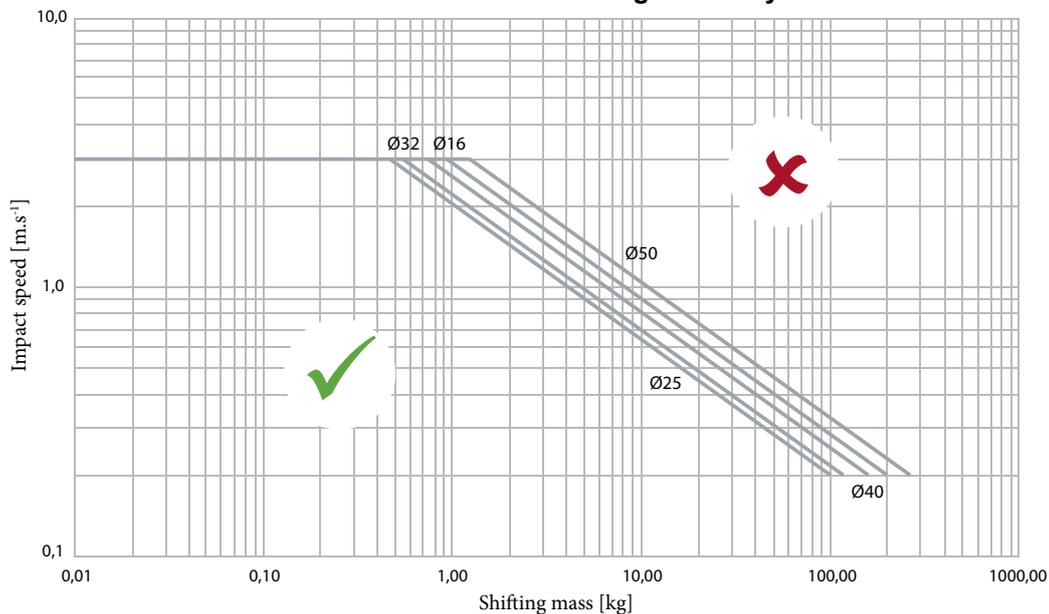

Dynamic load capacity

Procedure for determining the permissible values for dynamic stress:
- determine the KRV coefficient according to the speed
- multiply the permissible values for static stress by the KRV coefficient and the value calculated in this way is the maximum permissible value for dynamic stress

Series S1:	0	0,3	0,6	0,9	1,2	1,5	1,8	2,1	2,4	2,7	3
