

DOUBLE ACTING PNEUMATIC CYLINDERS SERIES MCGS TWIN GUIDE

STRÁNSKÝ A PETRŽÍK

Cylinders series MCGS are due to heavy integrated bearing predetermined for applications, where is lateral load or torsional moment. It is possible to use them as stopper cylinders, where the slide bearing is used, or as push or lift cylinders, where the linear bush bearing is used. Cylinders are equipped with magnet for proximity switches. There is no adjustable cushioning, for cushioning at the end positions the rubber pad is used. Cylinders series MCGS are with compact design. The air connection is possible from two sides (from the top and side).
