

SHUTOFF VALVE SERIES MVHR302 AND MVHR400

STRÁNSKÝ A PETRŽÍK

Shutoff valve is an easy and inexpensive way to add shutoff capability to an FRL unit. It allows the air supply to be closed and MVHR models can be operated either manually or by a solenoid valve. When the supply is closed, the compressed air is exhausted from the circuit behind the valve. Both positions of the manually operated model can be locked (padlock not included), which will contribute to safety during maintenance or adjustment. The valve is designed to be assembled with other air conditioning elements (using the couplings) or can be used separately. Size 302 is suitable for all elements of the MA**302 series, size 400 is then for MA**401 and MA**403.
