13.

CATALOGUE OF PNEUMATIC COMPONENTS

Dear customer,
this is the latest version of the catalogue of pneumatic components. Thank you for your interest and we hope
that this catalogue will be usefull for you.

Our company, Stransky a Petrzik, Pneumaticke valce spol. s r.o., exists on the market with pneumatic
components since 1991, as traditional and Czech producer of pneumatic cylinders and accessories. On the
1200 m² process area, the state-of-the-art technologies are used, which in conjunction with our development
allows not only fast and high-quality production of standard pneumatic components, but also special
components, designed and produced accordingly to the customer's requirements.

The our goal is to offer high-quality products with long lifetime and reliable service, to maximum satisfy the
customers. The result of our hard work are thousands of customers not only located in EU countries. However
our the most remarkable customers are traditionally from the Czech Republic, which pleases us very much.

If you are interested in our products, we are looking forward to good cooperation with you.

News in catalogue No. 13

Magnetically coupled rodless pneumatic cylinders series MCRPM

Magnetically coupled rodless cylinders series MCRPM offers long strokes with reduced installation place. Thanks to max. stroke up to 2 meters, these cylinders can be used in such an applications, where use of standard cylinder is impossible. For more information see page 2-40.

Boosters series MVHB

Boosters series MHB are used for generating of high pressure of hydraulic oil by air with common pressure. Boosters can be used for such operation as marking, forming, punching, riveting, shearing, straightening, and so on. For more information see page 2-79.

Booster regulators series MVBA

Pneumatic booster regulators series MVBA are used for increasing of air pressure. These booster regulators are able to twice increase inlet pressure, but due to safety, the maximal output pressure is restricted up to 0,99 MPa. For more information see page 2-80.

Bracket PBL-1 for cylinders with round tube for switch series KT-50

Small and reasonable switch can be used on the cylinders with round tube now. So you don't need to use big switches on small cylinders. For more information see page 3-3.

Solenoid indirect actuated valves series ISO 5599/1 COMPACT and ISO 5599/1

Pilot valve incl. coils of these popular valves was innovated, which brings lot of improvements and increasing of reasonability. For more information see pages 5-13 and 5-14.

Bidirectional flow control valve - internal/external threads, for screw driver setting

For more information see page 7-3.

Non-return valve, uncontrolled, with integrated push-in fittings

For more information see page 7-5.

Sensor fitting

Threshold sensor can detect a pressure drop and signal it with a command signal (s). When the piston completes its stroke, a command signal is given out to a direction valve to have the piston change the stroke. For more information see page 7-9.

Pressure indicator

Pressure indicator is used for visual display, if there is a pressure in the circuit. Indicator doesn't show the value of a pressure, but only if there is or isn't pressure. In case, that there is a pressure, the colour disk is visible in the dome, with visibility of 180°. For more information see page 7-9.

Precision pressure regulator series MAIR

Precision pressure regulators are used for reduce of pressure to precise working pressure, which is automatically hold on selected value. It can be used especially in control applications, where the exact value of output pressure is required. For more information see page 8-13.

Gauges for panel mounting

For more information see page 8-14.

Digital gauges

For more information see page 8-14.

News in catalogue No. 13

Connection plate for FRL units

Connection plate is used when two F/R/L units should be assembled into one assembly, like filter with lubricator, or filter and coalescing filter. For more information see page 8-15.

Valve with digital condensation removal timer

Valve for automatic condensation removal is used for draining of pressure tank or big filters. Main advantages are standard voltages 24 V DC and 230 V AC, enclosure IP65, compact design a digital timer with easy operation. For more information see page 8-15.

Electronic pressure switch, type MP10 push-in, or with thread G1/8"

Reasonable and compact - it is new pressure switch. It is available with thread for mounting for example directly into the pressure regulator, or with tube for use with push-in fitting. For more information see page 8-16.

Details about all news and changes in our catalogue can be easily found in our web pages on address
<http://www.stranskyapetrzik.cz/pneu-en/ke-stazeni/zmeny-pdf/>

Pneumatic components with certification

We also produce components for special usage, for example components with Ex certification for using in underground mines (area with danger of methane explosion). With regard to the very large range of these components, please ask our technical department for details.

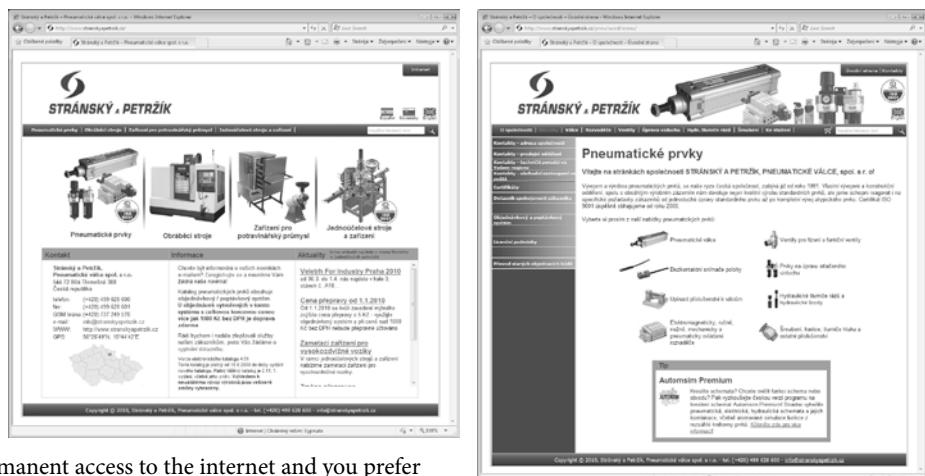

There is no question, that the internet is important communication tool nowadays. To make your access to the our latest information easy, you can always find our up to date catalogue and many other informations at address

<http://www.stranskyapetrzik.cz>

On this address you can find our complete offer not only of pneumatic components, but also other spheres which we deal with - machine tools, food-processing industry and single-purpose machines and equipment.

In the section with pneumatic components, you can easily use our ordering system. Each component can be simply put into the gasket directly from the catalogue, which dramatically simplify and make your work easier.

If you haven't got permanent access to the internet and you prefer electronic catalogue, we have got solution for you. Our up to date catalogue on CD is available at our address or at our consulting engineers.

3D models for your CAD system

... may be simply generated any time at our web site!

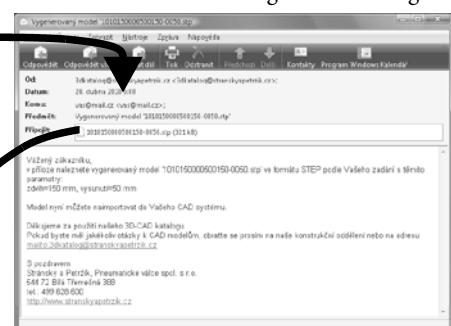

1. chose the product from our internet catalogue:

The screenshot shows the product details for VDMA 24562, NF E 49003.1. It includes a technical drawing of the cylinder, a table of dimensions, and a dropdown menu for selecting different configurations (e.g., Type valve, Mounting, Piston rod, etc.). At the bottom, there are buttons for generating a 3D model and viewing the catalog page.

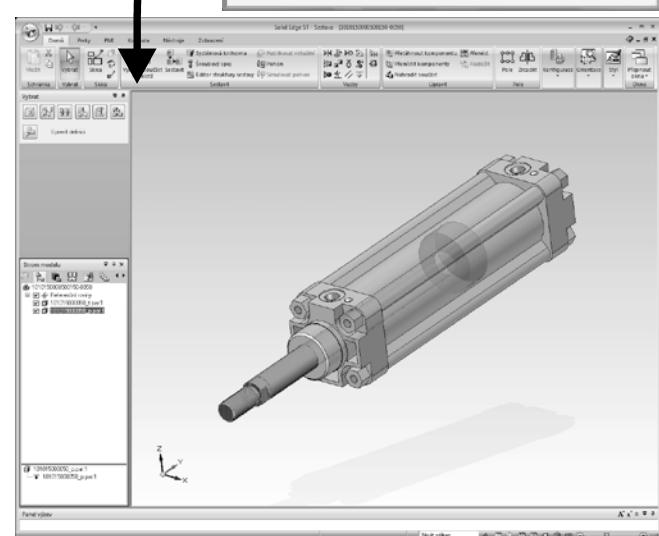

2. enter 3D model parameters
and e-mail address:

3. save enclosed model from
incoming e-mail message

4. import
model into
the your
CAD system

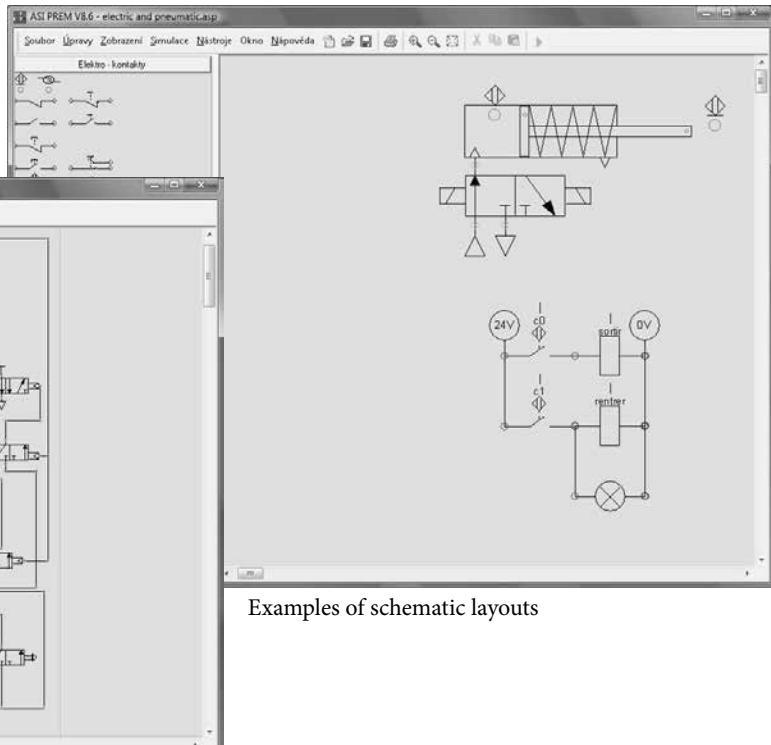

For more information about generating of 3D models please visit our website at <http://www.stranskyapetrzik.cz/pneu-en/ke-stazeni/3dkatalog/>

If you design pneumatic, electric, or hydraulic schematic layouts or their combination, you surely appreciate our new software in our offer. It is software **AUTOMSIM PREMIUM** designed by Irai France for creating and simulating of schematic layouts.

ORDER CODES

standard license ... 2899 0099 9000 0001

license package for schools, universities and professional educational institutions, accredited by Czech Ministry of Education (contains 10+1 licenses) ... 2899 0099 9000 0002

Examples of schematic layouts

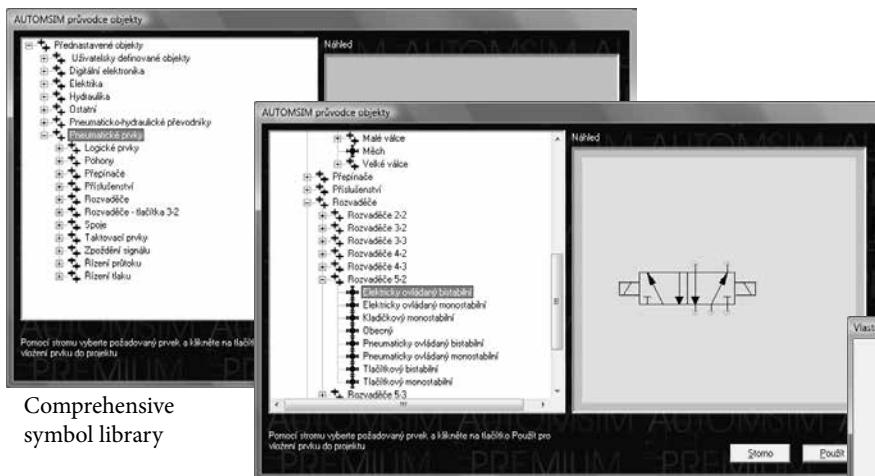

Using the symbol library, you can simply insert just the right symbol, which is necessary in your layout. If there is no specific symbol in the library, it can be easily modified from similar symbol by changing of the properties. Pneumatic cylinders can be related to proximity switches or roller lever valves, proximity switches to relays, relays to valve coils, etc. So it isn't just drawing of layouts, but circuit, which you simple built can be simulate during run and check, if the function conform the submission. Of course, the pressure level as well as percentage of adjustment of speed control and many other properties could be set and changed while simulating. It is also possible to display graph with various values.

You can also create the layout of your current circuit, with which you have some problems and check, where are the critical points.

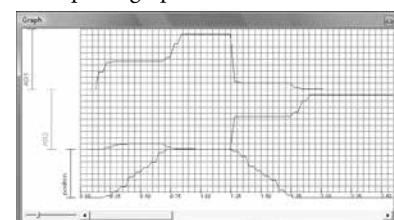

Layouts can be printed and exported into EMF file format, which is standard file format, which could be imported by any office software.

If you will fill fields like designation, supplier, description and other during inserting the symbols into the layout, the automatic creating of bill of material is available.

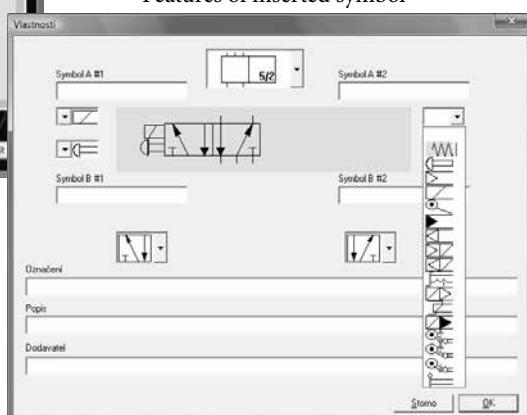

Example of graph

Comprehensive symbol library

Features of inserted symbol

AUTOMSIM PREMIUM is excellent for creating and functional simulating of layouts not only for its simplicity, but also for its price!
The full functional demo is available. Please contact us for possibility of delivery.

General conditions for pneumatic circuits

- it is necessary to observe appropriate safety rules, instructions, recommendation and specified parameters (temperature, pressure etc.), during setting in operation
- areas, which are pressurized even after closing of main air supply, should be specially marked in pneumatic circuits
- it is necessary to make allowance to product failure, eventually danger situations due to wrong operation, age or failure
- we recommend to mark with special sign whole pneumatic circuits, where the high caution during service is necessary
- we do not recommend to weld by electric arc on machinery, where pneumatic cylinders are mounted
- end users must take sufficient preventive steps to prevent injuries on material and health of employees

Conditions of use and running of pneumatic cylinders

- disassembly of single acting cylinders must be done very canny, because inside spring is mounted with preload
- working medium is modified compressed air
- we recommend to use our pneumatic oil for air lubricating, or some oil listed on recommended oil list, for renewing of lifetime grease use grease SAP-FML2A
- using of other than recommended oils leads to damage of O-rings and gaskets built-in not only in cylinders, but also in other components in pneumatic circuit
- if the piston rod speed is lower than 1 ms^{-1} the compressed air needn't to be lubricated; if piston rod speed is higher, we recommend to lubricate air by lubricator and pneumatic oil (see above); we also recommend to lubricate air, when dew point of compressed air is lower than -20°C
- special surface treatment, or material change (stainless steel) or using dust covers are possible options for hard conditions and aggressive surrounding
- other special designs or material exchange, gaskets exchange etc. are possible after consultation with our technical dept.
- it is necessary to observe correct mounting of cylinders and correct guiding of piston rod without radial forces (instead of versions which allows radial forces e.g. guide unit H)
- we recommend to use hydraulic shock absorbers, when heavy mass and high piston rod speed may occur - the machinery lifetime will be dramatically extended

Stroke tolerance of pneumatic cylinders

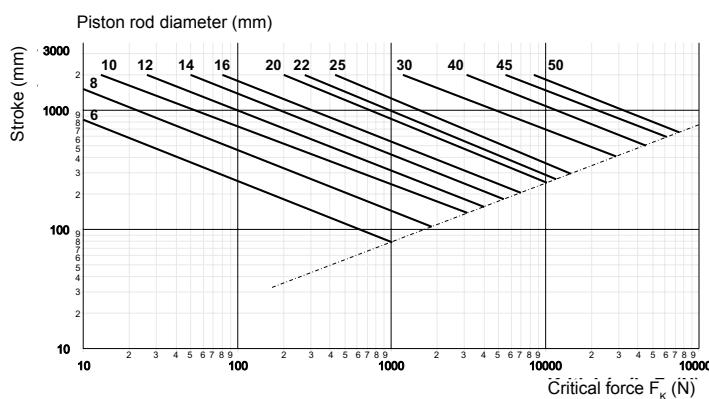

Stroke of cylinder may be bigger by tolerance accordingly to DIN ISO 6431, DIN ISO 6432 and VDMA 24562. The value of tolerance is due to production tolerances and depend on diameter and stroke as follows:

Standard	Piston diameter [mm]	Stroke [mm]	Allowable tolerance [mm]
DIN ISO 6432	8, 10, 12, 16, 20, 25	0 to 500	+1,5
DIN ISO 6431 VDMA 24562 NF E 49003.1	32, 40, 50	0 to 500	+2,0
		501 to 1250*	+3,2**
	63, 80, 100	0 to 500	+2,5
		501 to 1250*	+4,0**
	125, 160, 200, 250, 320	0 to 500	+4,0
		501 to 1250*	+5,0**

*) For strokes bigger than 1250 mm the tolerance is depending on agreement of producer and customer

**) This value is not listed in standard VDMA 24562, or NF E 49003.1 and it is valid only for standard DIN ISO 6431

When stroke is big, there must be checked, if exceed of strength in buckling can't occur, even if cylinder should pass due to piston diameter. Fast check should be done by read the data in graph below:

For exact calculate, if critical force wasn't exceed use this formulae, F_K must be higher than load to prevent piston rod damage:

Where: F_K is critical force on piston rod [N]

$$F_K = \frac{\pi^2 \times E \times J}{l^2 \times k}$$

E is stress modulus $2,1 \times 10^5 \text{ MPa}$

J is quadratic cross section moment [mm^4]

l is critical length (=double stroke) [mm]

k is safety coefficient (about 4 in practice)

Conditions of use and running of pneumatic valves

- it is necessary to keep in mind, that spool of valve could be in undefined position, before first activation and uncontrolled movements should occur
- when 5/3 valves or non-return valves are used, it is necessary to keep in mind that some parts of circuit should be always pressurized - high caution during service is necessary
- it is necessary to observe listed technical data, especially pressure, air cleanliness and solenoids voltage
- exhaust ports on valves should be equipped with silencers to prevent intrusion of junk into valve
- valves can work on either lubricated or non-lubricated air (for more information see chapter Modified compressed air)

Short form port designations:

Port	Designation to ISO 5599	Designation to DIN*	Designation to ANSI*
Supply port	1	P	P
Working line	2	A	B
Exhaust line	3	R	EB
Working line	4	B	A
Exhaust line	5	S	EA
Pilot line	12	Z	CA
Pilot line	14	Y	CB

*) Designation by letters shouldn't be used anymore.

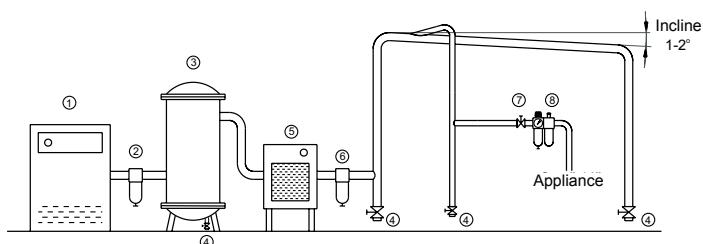

Contacts protecting when electromagnetic coils are used

Electromagnetic coil is coil, which defend against any voltage change. Due this, it is possible, that voltage spike or electrical ark will occur when switching voltage. By this, the damage of isolation or contacts burning may occur. There are at least four ways how this danger eliminate:

- serial connection of RC circuit, it is necessary to calculate values of resistance and capacitor for each application
- for DC voltage, the diode could be used, it is necessary to calculate values of diode for each application
- Zener diode could be used for AC even DC voltage, it is necessary to calculate values of diode for each application
- varistor could be used for AC even DC voltage, varistor should be built-in in connector of valve (see connectors for valves)

Distribution of compressed air

The operational reliability and service life of a pneumatic system depend to a large extent on the preparation of the compressed air. Impurities in the compressed air such as scale, rust and dust as well as the liquid constituents in the air which deposit as condensate can cause a great deal of damage in pneumatic systems. These contaminants accelerate wear on sliding surfaces and sealing elements, adversely affecting the functioning and service life of pneumatic components. As a result of switching the compressors on and off, pressure fluctuations occur which have an unfavourable effect on the functioning of the system. In order to eliminate these effects, compressed air service units must be installed in every pneumatic control system.

Example of air distribution:

Compressed air goes from compressor through coarse filter to air receiver. Then the air is led into air dryer and another filter, which should catch junk, released from air receiver and dryer. Air drier is used only in substantiated cases. Then distribution in plastic or metal tubes follows, whereas the tubes should incline 1-2° due to appropriate condensed water drain. Particular distributaries to consuming devices should go out from main distribution towards to crossways up. If there are intense pressure beats during compressed air consumption, it is useful to use another smaller air receiver between distributary and consuming device. This another receiver should balance the pressure beats. Finally, the standard FRL unit is piped, or some of air preparation modules.

Legend:

- 1) compressor
- 2) coarse filter
- 3) air receiver
- 4) drain cock
- 5) air dryer
- 6) filter
- 7) shut off valve
- 8) standard FRL unit

Modified compressed air

Modified compressed air = filtered air without solid particles and liquids, eventually lubricated.

All our produced pneumatic items are greased with special grease, so it isn't necessary to lubricate air in standard conditions. But we recommend to regularly check lifetime grease level and if decline will occur, renew grease filling. However these items couldn't be exposed to air polluted by water or oil, because the lifetime grease should flush out. Since this, the air should be lubricated, or lifetime grease filling should be renewed. Special grease for lifetime filling is available, please see chapter Air preparation or contact our sales dept.

If pneumatic circuit is stressed and heavy duty, we recommend to lubricate air due to increase lifetime of pneumatic items.

The operational reliability and service life of pneumatic systems depend among others to quality of incoming compressed air.

Junk and moisture contained in air increases surface wear of parts and gaskets, what brings decline of economy and lifetime of pneumatic items. So, air preparation consist of liquid removal (mainly water and oil), suitable dimensioned filtration of solid junk and appropriate air lubricator.

Air after the modification must be so clean to not cause any damage on pneumatic system and sequentially damage to machinery. Using of filter the maximal flow capacity is lower because filter is basically resistance, which intercepts air flow. Filter should be with such a filter element, so the sufficient quality will be reached with reference to economy of system. If high quality of compressed air is required, the air should be filtered in several steps. If we use only coalescing filter, which will ensure requested air quality, we have to calculate with serious decrease its lifetime.

The compressed air quality is expressed by quality classes, which are described in ISO 8573-1 standard. Acceptable values of junk are listed in this standard too.

Quality classes according to ISO 8573-1

Class	Solid junk		Max. pressure dew point [°C]	Max. oil concentration [mg/m³]
	Max. particle size [µm]	Max. concentration [mg/m³]		
1	0,1	0,1	-70	0,01
2	1	1	-40	0,1
3	5	5	-20	1
4	15	8	+3	5
5	40	10	+7	25
6	—	—	+10	—
7	—	—	unstipulated	—

Recommended using of quality classes

Area	Solid junk		Water		Oil	
	Max. class	Max. particle size [µm]	Max. class	Max. dew point [°C]	Max. class	Max. concentration [mg/m³]
Pneumatic cylinders	5	40	4	+3	5	25
Pneumatic valves	3 to 5	5 to 40	4	+3	5	25
Fine regulators	3	5	4	+3	3	1
Measurements	2	1	4	+3	3	1
Other industry	5	40	3 to 7	-20 to +10 and more	3 to 5	1 to 25

Mounting, operation and service of air preparation units

There is necessary to pay attention to flow direction, which is marked by arrows or marks IN/OUT during mounting of units. The following sequence of units sort should be observed: shut off valve, particulate filter, coalescing filter regulator, lubricator. Bowls of particulate units must be mounted towards to bottom. Lubricator should be as closed as possible to consuming device (max. 5 to 10 m).

Condensate water level in bowl mustn't exceed level of bottom of filter element or mark on a bowl. For drain, there is connection for tube on the bottom of bowl. Automatic drain doesn't practically need service, but if semi-automatic drain is used, it is necessary to regularly check

level of condensed water in bowl and expel it always if level of water achieve filter element or mar on the bowl. Semi-automatic drain automatically expels water if the primary pressure drop under 0,05 MPa. If it is necessary to expel water immediately, there are 2 systems: one has got button - pressing the button the water is removed. The second system is without button - for removing the water simply push the tube connection towards to the bowl. If the filter element is polluted, it must be changed. Before disassembling shut off air supply and depressurize the filter, remove bowl (release safety lock on side of bowl or push the bowl towards to the unit, turn it off 45° and pull it out). Then unscrew the baffle and remove filter element. Procedure at assembling is the same, but in reverse order.

If lubricator is used, it is necessary to keep sufficient level of oil. Oil refilling is possible directly into bowl when air supply is shut off, or by button head fill nut during operation. Before disassembling shut off air supply and depressurize the lubricator, remove bowl (release safety lock on side of bowl or push the bowl towards to the unit, turn it off 45° and pull it out). Fill in bowl (see level mark on the bowl) and mount bowl back. Procedure at assembling is the same, but in reverse order. It is necessary to use only recommended oils.

Some bowls are made from polycarbonate and could be cleaned only with household soap and water. Do not use any solvent (alcohol), bowls may crackle.

Recommended oils for compressed air lubricating

Primarily we recommend to use our pneumatic oil with order code 2995 0101 0000 0000, which composition was specially designed for this purpose. It is oil, which is foamless, nonaggressive to gaskets and has suitable mechanical characteristics (viscosity etc.).

In case of need, the following oils could be used too:

Supplier	Designation	Supplier	Designation
Stránský a Petržík	Pneumatic oil, order code 2995 0101 0000 0000	Fuchs	Renolin MR1, MR3
Shell	Tellus Ol 10	Optimol	Ultra 10
Mobil Oil	Velocite Oil No. 6	Agip	OSO10
BP	Energol HLP10	Elf	Spinelf 5, 10
Esso	Spinesso 10, Nutto H5, H10	Total	Azolla 10
Aral	Vitamol GF10, DE 10, Sumorol CM5, CM10	Fina	Cirkon 10

Compressed air consumption

Calculation of air consumption for pneumatic cylinder:

$$Q = Z \times (qp + qz) \times n \times 0,1$$

where

Q is air consumption [l/min]

Z is stroke [mm]

qp is air consumption for 10 mm of stroke when thrust [l]

qz is air consumption for 10 mm of stroke when retract [l]

n is number of complete strokes (thrust+retract) in a minute

Table of air consumption sp / sz [l] for 10 mm of stroke:

Piston diameter mm	Piston area mm ²	Working pressure (MPa)										
		0,1	0,2	0,3	0,4	0,5	0,6	0,7	0,8	0,9	1,0

*Recommen*ded flow capacity [l/min] depending on pressure:

Pressure [MPa]	Port size					
	G1/8"	G1/4"	G3/8"	G1/2"	G3/4"	G1"
0,2	126	227	357	797	1416	2213
0,4	212	377	593	1328	2361	3689
0,6	297	529	826	1860	3306	5163
0,8	382	680	1062	2391	4250	6640
1,0	468	830	1299	2923	5194	8115

Values of flow capacity are applied to standard conditions at 20°C and pressure 0,1 MPa. The flow velocity 25 ms⁻¹ is supposed for calculation.

Action force

Calculation of force on piston rod of pneumatic cylinder:

$$F = (Sp \text{ (or } Sz) \times p) - T$$

where F is force on piston rod of pneumatic cylinder [N]

Sp is piston area at thrust [mm²]

Sz is piston area at retract [mm²]

p is working pressure [MPa]

T is friction force (about 10% in practice)

Table of retract force on piston rod of pneumatic cylinder [N]

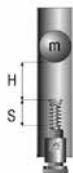

Piston diameter [mm]	Working pressure [MPa]											
	0,1	0,2	0,3	0,4	0,5	0,6	0,7	0,8	0,9	1	1,1	1,2

Hydraulic shock absorber selection

Five basic criteria are required for sizing the shock absorbers:

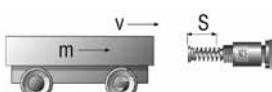

- impacting mass m (kg)
- impact speed v (m/s)
- additional external forces acting on the mass e.g. propelling force F (N)
- number of strokes of the shock absorber per hour X (1/h)
- number of parallel shock absorbers

Free falling mass

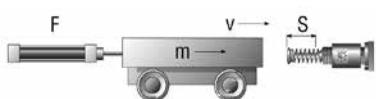

- $W_k = m \cdot g \cdot H$
- $W_A = m \cdot g \cdot S$
- $W_{kg} = W_k + W_A$
- $W_{kg/h} = W_{kg} \cdot X$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$
- $v = v_e = \sqrt{2 \cdot g \cdot H}$

Mass without propelling force

- $W_{kg} = \frac{m \cdot v^2}{2}$
- $W_{kg/h} = W_{kg} \cdot X$
- $v = v_e$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$

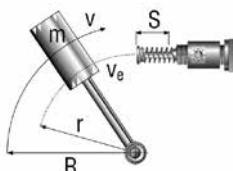

Mass with propelling force, horizontal

- $v_e = \frac{v}{K_1}$
- $W_k = \frac{m \cdot v_e^2}{2}$
- $W_A = F \cdot S$
- $W_{kg} = W_k + W_A$
- $W_{kg/h} = W_{kg} \cdot X$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$

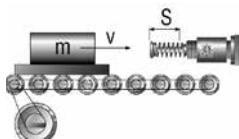

Movement downward: $W_A = (F + m \cdot g) \cdot S$
Movement upward: $W_A = (F - m \cdot g) \cdot S$

Swinging mass without propelling force

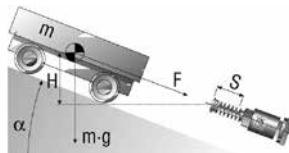

- $W_k = \frac{m \cdot v^2}{2} = \frac{J \cdot \omega^2}{2}$
- $W_A = \frac{M \cdot S}{r}$
- $W_{kg} = W_k + W_A$
- $W_{kg/h} = W_{kg} \cdot X$
- $v_e = r \cdot \omega = \frac{v}{R}$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$

Mass on driven rollers

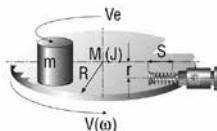

- $W_k = \frac{m \cdot v^2}{2}$
- $W_A = m \cdot g \cdot S \cdot \mu$
- $W_{kg} = W_k + W_A$
- $W_{kg/h} = W_{kg} \cdot X$
- $v = v_e$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$

Mass on incline

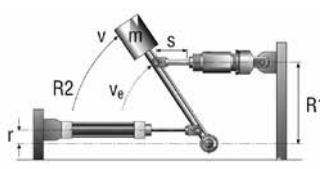

- $W_k = m \cdot g \cdot H$
- $W_A = m \cdot g \cdot \sin \alpha \cdot S$
- $W_{kg} = W_k + W_A$
- $W_{kg/h} = W_{kg} \cdot X$
- $v = v_e = \sqrt{2 \cdot g \cdot H}$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$

Rotary table with propelling force

- $W_k = \frac{m \cdot v^2}{2} = \frac{J \cdot \omega^2}{2}$
- $W_A = \frac{M \cdot S}{r}$
- $W_{kg} = W_k + W_A$
- $W_{kg/h} = W_{kg} \cdot X$
- $v_e = r \cdot \omega = \frac{v}{R}$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$

Swinging mass with propelling force

- $W_k = \frac{m \cdot v^2}{2}$
- $W_A = \frac{M \cdot S}{R1} = \frac{F \cdot r \cdot S}{R1}$
- $W_{kg} = W_k + W_A$
- $W_{kg/h} = W_{kg} \cdot X$
- $v_e = R1 \cdot \omega = \frac{v}{R2}$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$

Formulae

Effective mass	Counter force	Deceleration time
$m_e = \frac{2 \cdot W_{kg}}{v_e^2}$	$F_g = \frac{W_{kg} \cdot 1.2^*}{S}$	$t = \frac{2 \cdot S}{v_e} \cdot 1.2^*$
	Deceleration time	Stroke
$a = \frac{v^2}{2 \cdot S} \cdot 1.2^*$		$S = \frac{v^2}{2 \cdot a} \cdot 1.2^*$

*) Calculation for optimum setting. Allow a safety margin!

Used values and variables

W_k [Nm]	kinetic energy	K_1 [1]	correction factor for pneumatic drive force ($K_1=0,65$)
W_A [Nm]	propelling force energy		
W [Nm]	total energy	M [Nm]	torque
$W_{kg/h}$ [Nm·h ⁻¹]	total energy per hour	R, r [m]	radius
m [kg]	mass	H [m]	height
m_e [kg]	effective mass	g [m·s ⁻²]	acceleration due to gravity
v [m·s ⁻¹]	impact speed	J [kg·m ²]	moment of inertia
v_e [m·s ⁻¹]	effective speed	ω [s ⁻¹]	angular velocity
X [h ⁻¹]	number of strokes per hour	μ [1]	coefficient of friction (steel=0,2)
S [m]	stroke	a [$^\circ$]	angle
F [N]	propelling force	a [m·s ⁻²]	acceleration / deceleration
F_p [N]	pneumatic drive force	t [s]	deceleration time
		F_g [N]	counter force

Summary of the pneumatic symbols based on DIN ISO 1219

Energy conversion

Single acting cylinder, return movement by external force

Single acting cylinder, return movement by spring

Double acting cylinder

Double acting cylinder with double-ended piston rod

Double acting cylinder with adjustable cushioning at end of stroke

Double acting cylinder with double-ended piston rod and adjustable cushioning at end of stroke

Double acting cylinder with adjustable cushioning at end of stroke and magnetic piston

Double acting cylinder with double-ended piston rod and adjustable cushioning at end of stroke and magnetic piston

Pneumatic motor with limited range of swivel

Pressure intensifier for the same fluid

Pressure intensifier for air and liquid

Compressor

Vacuum pump

Directional control valves

2/2-way valve, manually actuated

2/2-way valve, normally closed, solenoid actuated

2/2-way valve, normally opened solenoid actuated

3/2-way valve, manually actuated

3/2-way valve, actuated by lever

3/2-way valve, actuated by pushbutton

3/2-way valve, actuated by pedal

3/2-way valve, pneumatically actuated, monostable

3/2-way valve, pneumatically actuated, bistable

5/2-way valve, pneumatically actuated, bistable

5/2-way valve, indirect solenoid actuated, monostable

5/2-way valve, indirect solenoid actuated, bistable

3/2-way valve, normally closed, actuated by roller lever

3/2-way valve, normally opened, actuated by roller lever

3/2-way valve, normally closed, actuated by roller lever with idle return

3/2-way valve, normally closed, indirect solenoid actuated

3/2-way valve, normally opened, indirect solenoid actuated

5/2-way valve, actuated by lever

5/2-way valve, actuated by pushbutton

5/2-way valve, actuated by pedal

5/2-way valve, pneumatically actuated, monostable

5/3-way valve, actuated by lever, centre position closed

5/3-way valve, actuated by lever, centre position exhausted

5/3-way valve, indirect solenoid actuated, centre position closed

5/3-way valve, indirect solenoid actuated, centre position opened

Directional control valves generally and control mechanisms

2 positions

Roller lever with idle return

3 positions

Direct solenoid

Manual control - general

Direct application of pressure

Pushbutton

Direct application by pressure relief

Lever

Indirect by application of pressure (pilot)

Pedal

Solenoid and pilot valve

Plunger

Solenoid and pilot valve with manual override

Spring

Detent for 3 positions

Roller lever

Air preparation

Filter

Dryer

Water separator

Lubricator

Water separator with automatic drain

Standard unit (filter pressure regulator with gauge, lubricator), simplified representation

Filter with water separator with automatic drain

Pressure regulator

Energy transmission, valves

Working line

Gauge

Control line

Pressure source

Exhaust line

One-way flow control valve, adjustable

Flexible pipeline

Bidirectional flow control valve, adjustable

Line connection

Pressure switch

Quick coupling with mechanically opened non-return valves, coupled

Check valve with spring

Rotary connection with 1 path

Piloted check valve

Rotary connection with 2 paths

OR disjunction (logical sum)

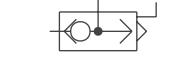

Silencer

AND conjunction (logical product)

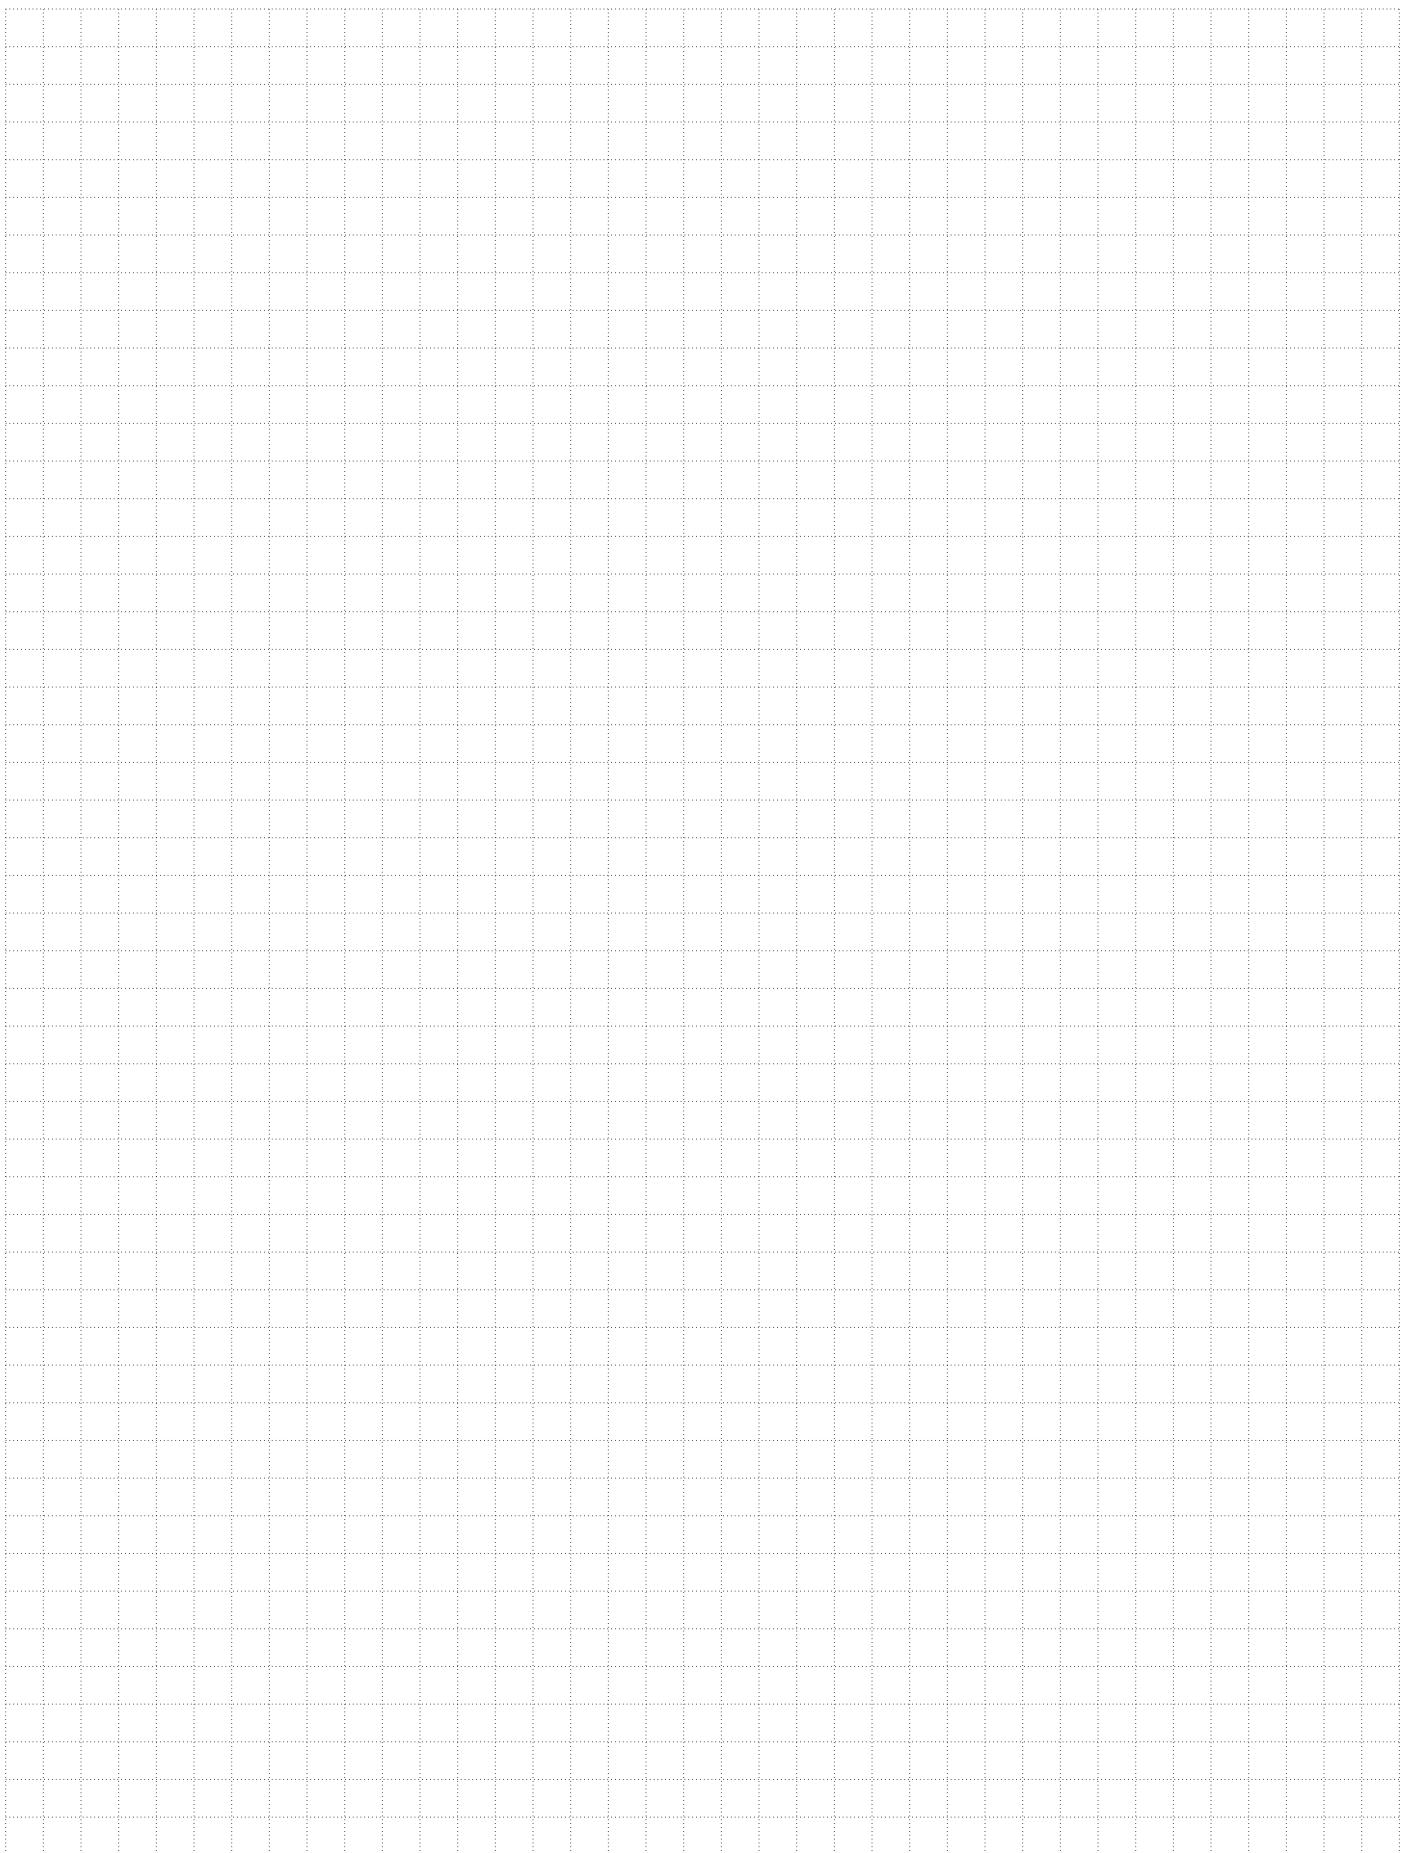

Quick exhaust valve

Pneumatic capacitor

Double acting pneumatic cylinders

	Swing clamp series MTAD and MTAS	2-76
	<i>Piston diameter 25 to 63 mm</i>	
	Clamp series MCKA	2-77
	<i>Piston diameter 40 to 63 mm</i>	

	Angular and parallel grippers series MCHA and MCHB ..	2-78
	<i>Piston diameter 12 to 32 mm</i>	
	Three jaws parallel grippers series MCHG2	2-79
	<i>Piston diameter 16 to 125 mm</i>	

Pneumatic-hydraulic power cylinders and boosters

	Pneumatic-hydraulic power cylinders series MHPD ..	2-80
	<i>Piston diameter 50 to 125 mm</i>	
	Boosters series MHB	2-81
	<i>Pressure increase rate 7,8 to 25</i>	

	Booster regulator series MVBA	2-82
	<i>Pressure increase rate 2</i>	

Other types of pneumatic cylinders

	Cylinders to customer's request, special cylinders ..	2-83
	<i>Piston diameter 8 to 600 mm</i>	

Modern design, quality processing and high-quality of used parts - there are characteristics of new cylinders series. Dimensions conforms to the international standards ISO 6431, VDMA 24562 and NF E 49003.1, that is why it can replace pneumatic cylinder, which is made by any producer to these standards. Fully adjustable cushioning at end of stroke and magnet for proximity switches are standard for this series. The proximity switches can be mounted directly to the tube's groove - so no brackets are necessary. The lifetime of cylinders is more than 4000 km at standard conditions.

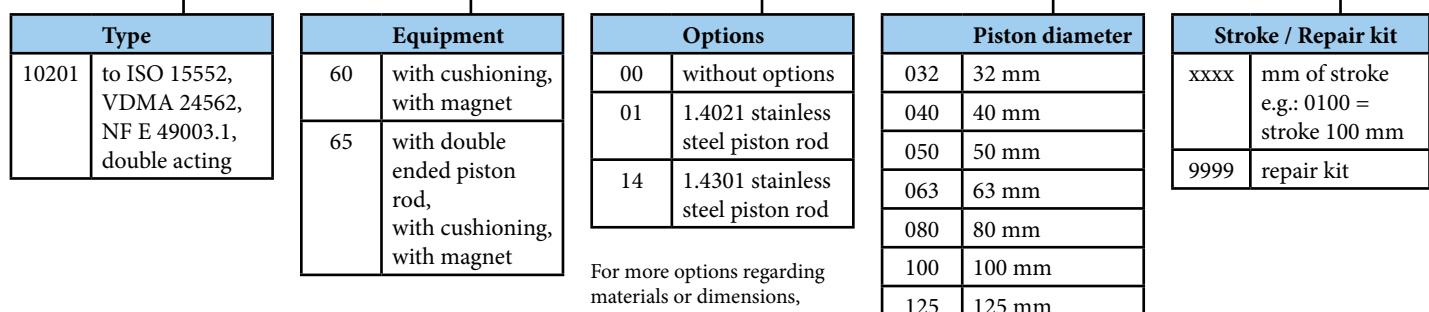

Working pressure	0,6 MPa

* When guide unit H or U is used on cylinder with magnetic piston, it is necessary to use cylinder with tie rod version (option No. 13). There is no free space to mount switch bracket near the front cap when the profile tube is used (position for extend piston rod).

**) Type of pivot pin should be selected accordingly to the cylinder profile/tube - with cutout for profile or for round tube.

DOUBLE ACTING PNEUMATIC CYLINDERS WITH DOUBLE PISTON ROD VDMA 24562, NF E 49003.1

Mounting dimensions meets standard VDMA 24562. Fully adjustable cushioning at end of stroke is available. Using of double piston rod, the rotation of equipment mounted on connecting plate is prevented. This cylinder may not be efforted by torque. Piston rods are guided in slide bearings without clearance.

DOUBLE ACTING PNEUMATIC CYLINDERS WITH LOCK DEVICE VDMA 24562, NF E 49003.1

Warning

Clamping force is purely static. When exceeding load, slipping of piston rod may occur, or piston rod and/or lock device can be damaged. Right connection and suitable designed control is necessary for impact free work. Please consult your connection with our technical dept.

Cylinders are designed to meet the specifications of international standard VDMA 24562 for mounting. The cylinders can work in higher temperatures by request. Fully adjustable cushioning at end of stroke is available. Lock device is actuated by spring force and deactivated by compressed air. Lock device is self-locking.

Lock device is not a safety element! The user must take relevant safety precautions!

Working pressure	0,6 MPa
Min. pressure	0,15 MPa
Max. pressure	1,0 MPa
Min. pressure for lock release	0,2 MPa

For dimensions of pneumatic cylinder on which the lock device is attached, see page 2-5

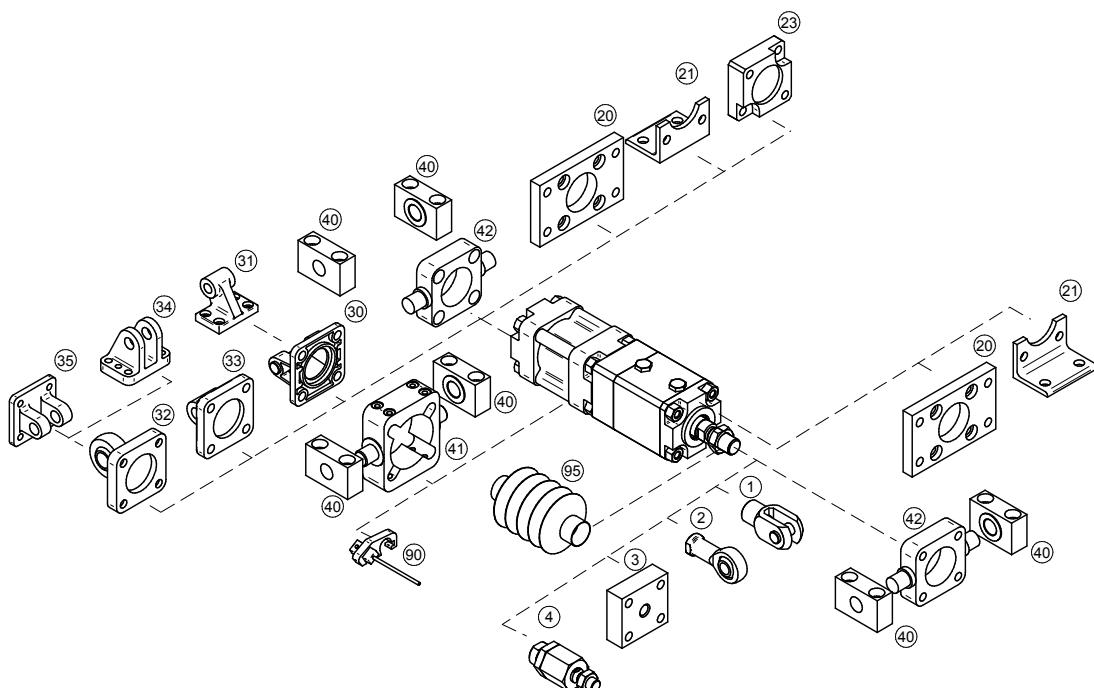

Connection example for pushbutton control:

Pressing the left pushbutton, the lock unit will unclamp and air which flows through right pushbutton into cylinder will extend it. After release pushbutton, compressed air is released from lock unit, which clamps piston rod and cylinder stops. For quick stopping of cylinder, the quick exhaust valve is used. The important on this connection is, that both chambers of cylinder are still with compressed air and for motion control discharging of air from particular chambers is used, which prevents from impacts or unwanted countermovements.

important on this connection is, that both chambers of cylinder are still with compressed air and for motion control discharging of air from particular chambers is used, which prevents from impacts or unwanted countermovements.

DOUBLE ACTING PNEUMATIC CYLINDERS

ISO 15552, VDMA 24562, NF E 49003.1

WITH END-POSITION LOCKING

Modern design, quality processing and high-quality of used parts - there are characteristics of new cylinders series. Cylinders are equipped with automatic locking device in one or both end positions. When air supply failure occurs, cylinder is locked in end position. Release is made automatically after air supply is restored. Dimensions conform to the international standards ISO 6431, VDMA 24562 and NF E 49003.1, that is why it can replace pneumatic cylinder, which is made by any producer to these standards. Fully adjustable cushioning at end of stroke and magnet for proximity switches are standard for this series. The proximity switches can be mounted directly to the tube's groove - so no brackets are necessary.

DOUBLE ACTING PNEUMATIC CYLINDERS

TANDEM

VDMA 24562, NF E 49003.1

Tandem cylinder is built-up from two or three cylinders, has common piston rod and almost double or triple thrust and return force. Cylinders are designed to meet the specifications of international standard ISO 6431, VDMA 24562 a NF E 49003.1 for mounting. The cylinders can work in higher temperatures by request. Fully adjustable cushioning at end of stroke is available.

Working pressure	0,6 MPa
Min. pressure	0,15 MPa
Max. pressure	1,0 MPa
Temp. range	-20°C to +80°C *
Working medium	modified compressed air

*) values are valid for standard gaskets

* When guide unit H or U is used on cylinder with magnetic piston, it is necessary to use cylinder with tie rod version (option No. 13). There is no free space to mount switch bracket near the front cap when the profile tube is used (position for extend piston rod).

**) Type of pivot pin should be selected accordingly to the cylinder profile/tube - with cutout for profile or for round tube.

DOUBLE ACTING PNEUMATIC CYLINDERS COMPACT

Compact cylinders are smaller than standard cylinders and they are suitable especially, when there isn't enough space for standard cylinder. Dimensions of mounting holes meets international standards ISO 6431, VDMA 24562 and NF E 49003.1, that is why standard mounting accessories can be used. There are bumpers in both end positions.

* Please check dimensions of thread on cylinder and accessories for piston rod, before you order it (for example: compact cylinder piston dia. 40 mm has thread M10x1,25 on piston rod, piston rod clevis for cylinder dia. 40 has thread M12x1,25, so it is necessary to order piston rod clevis for cylinder dia. 25/30, where is thread M10x1,25).

DOUBLE ACTING PNEUMATIC CYLINDERS

CNOMO 06.07.02

Cylinders are designed to meet the specifications of international standard CETOP. Fully adjustable cushioning at end of stroke and magnetic piston for proximity sensing are available. Another materials of components and seals are available on request.

We recommend to use cylinders to ISO 15552 and VDMA 24562 for new designs.

Cylinders are designed to meet the specifications of international standard ISO 6432. The cylinders can work in higher temperatures by request. Fully adjustable cushioning at end of stroke is available for diameters 20 and 25 mm, diameters 16 mm and less are without cushioning at the end of stroke. Cylinders with pressed-in tube can't be disassembled.

DOUBLE ACTING PNEUMATIC CYLINDERS ANTI-CORROSIVE - HYGIENIC CLEAN

Anti-corrosive cylinders are designed for use in area, where the hygienic clean is required (food processing or packing industry) or in aggressive chemical environment. The profile of the cylinder is smooth, to prevent dirt deposition. Fully adjustable cushioning at end of stroke is available as well as magnetic piston. Anti-corrosive cylinders are produced in several versions, for example: with thread on the front cap and with mounting holes on end cap, or with integrated swivel eye on end cap, and more. For using in food processing industry please choose appropriate option or contact our technical dept.

DOUBLE ACTING PNEUMATIC CYLINDERS

SHORT STROKE WITH GUIDE WITH SLIDE BEARINGS

Pneumatic cylinder may be used, when small mounting dimensions are required. The cylinders can work in higher temperatures by request. There is no cushioning at end of stroke. This design features a torque resistant guide system to prevent piston rod rotation. Guiding rods are mounted in slide bearings without clearance.

These mechanically coupled rodless cylinders offer long strokes with reduced installation place. Thanks to max. stroke up to 6 meters, these cylinders can be used in such an applications, where use of standard cylinder is impossible. This series uses well-proved two bands principle. Series S5 is equipped with slide guide with plastic bearings, series VL1 is equipped with rolling guide with ball bearings. There is also locking unit available for series S5 and VL1 (for details please contact our technical dept.)

Examination and selection of cushioning

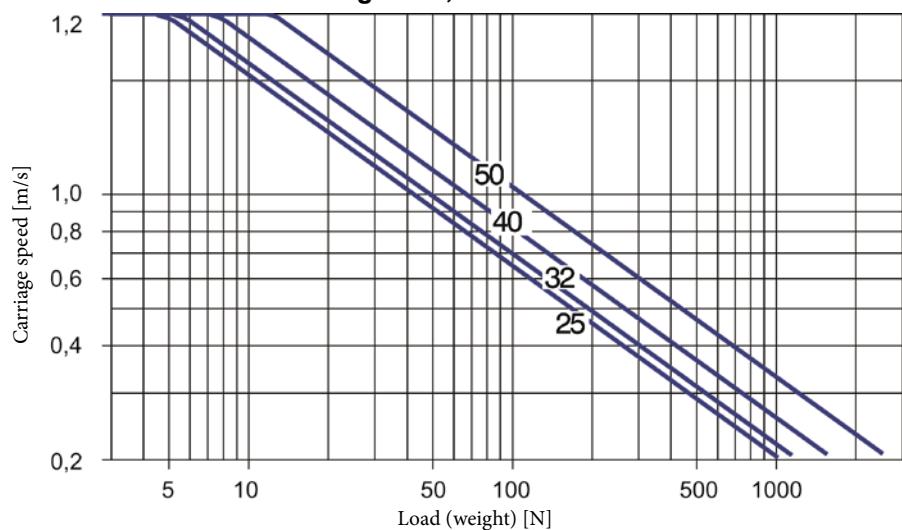

In a system with dynamic masses as for example with the rodless cylinder, it is essential to control the dissipation of the kinetic energy during braking until standstill. The first thing to be done is to select cushioning. Two kinds are available: 1. internal cushioning and 2. external cushioning.

It is of special significance that the carriage with load does not hit the end cap at high speed. If the point corresponding to a given load and speed lies beneath the appropriate curve, the cushioning is able to absorb the kinetic energy of the system. Vice versa if the point lies above the curve, the cushioning is not able to absorb the kinetic energy, in which case you must:

- reduce load and keep the speed the same
- decrease the speed and maintain the load
- select a larger cylinder
- use external damping (see page 9-1)

Cushioning capacity is shown in the diagrams on the right (in respect to final speed, when carriages get close to end caps).

Cushioning of S1, S5 and VL1 series

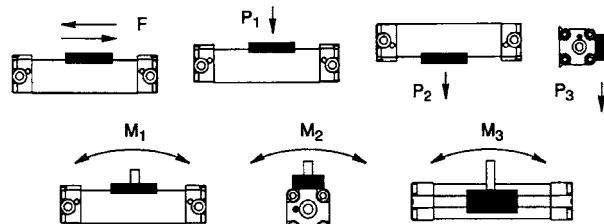

Calculation of admissible load of cylinders series S1, S5 and VL1

Allowable values of static load for S1 series

		P1, P2, P3 [N]	M1 [Nm]	M2 [Nm]	M3 [Nm]	P1, P2, P3 [N]	M1 [Nm]	M2 [Nm]	M3 [Nm]
25	250	700	34	17	34	1000	63	25	63
32	420	700	51	20	51	1000	93	30	93
40	640	1100	120	46	120	1600	230	69	230
50	1050	1500	170	85	170	2000	310	110	310

Allowable values of dynamic load for S1, S5 and VL1 series

How to find allowable value at dynamic load:

- take Kd value from graph according to the speed
- allowable values of static load multiple by Kd value and we will get max. allowable value for dynamic load

Long carriage (12 mounting holes)

Adjusting of the carriage of series VL1

In case of off-centred loads it is necessary to adjust the screws A as shown below. The arrows indicate the screws to be adjusted, in accordance with the position of the load. Adjust the screw A by one turn or more depending on the load. Put a drop of Loctite 242 on the screw B and tighten it thoroughly. Finally loosen both screws by 90°.

*) For more information about locking unit and proximity switches for rodless cylinders, please contact our technical dept.

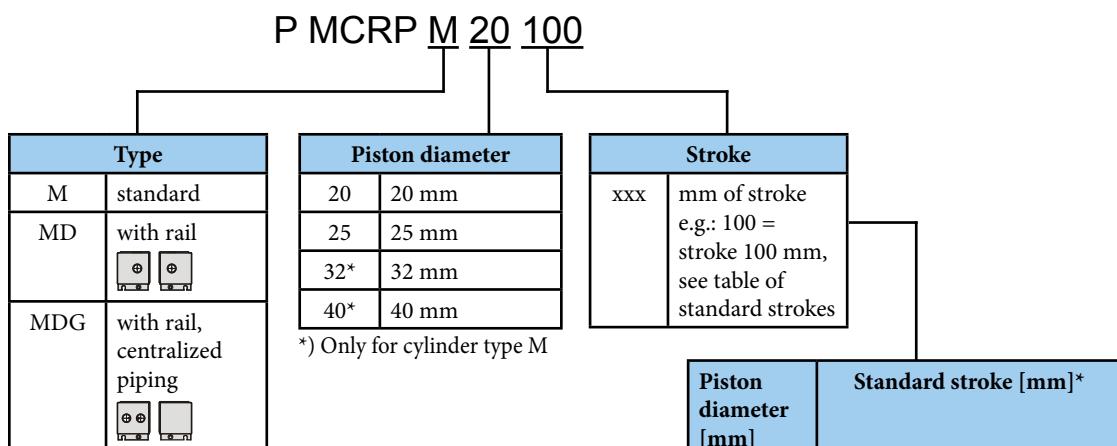

Magnetically coupled rodless cylinders series MCRPM offers long strokes with reduced installation place. Thanks to max. stroke up to 2 meters, these cylinders can be used in such an applications, where use of standard cylinder is impossible. There is no fix connection between piston and carriage, when the force of magnet is exceeded, the carriage will move independently on piston. This feature is utilized as a safety feature, in some applications. Force transmission is provided by strong magnets in piston and carriage. There is no adjustable cushioning at end of stroke.

Working pressure	0,6 MPa
Min. pressure	0,16 MPa
Max. pressure	0,7 MPa
Temp. range	+5°C to +60°C
Working medium	modified compressed air
Carriage speed	50 to 500 mms ⁻¹

Piston diameter [mm]	20	25	32	40
Force at 0,6 MPa [N]	170	265	432	675
Holding force of magnets [N]	231	363	588	922
Connection	G1/8"	G1/8"	G1/8"	G1/4"
Max. stroke of standard type / type with rail [mm]	1500 / 1000	2000 / 1000	2000 / -	2000 / -
Weight 0 mm stroke of standard type / type with rail [kg]	0,41 / 0,52	0,66 / 0,71	1,18 / -	2,00 / -
Weight add. per 1 mm stroke of standard type / type with rail [kg]	0,043 / 0,102	0,046 / 0,115	0,066 / -	0,083 / -

Order codes

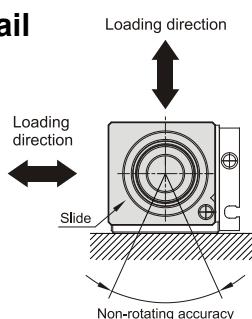

*) Please consult us if stroke is out of specification,
stroke increment is 1 mm

Allowable load of cylinder with rail

Piston dia. [mm]	Max. allow- able load [N]	Non-rotating accuracy [°]
20	11	4
25	11	4

Note: Non-rotating accuracy will be reduced by distortion due to longer stroke and switch rail.
Values are for 300 mm stroke.

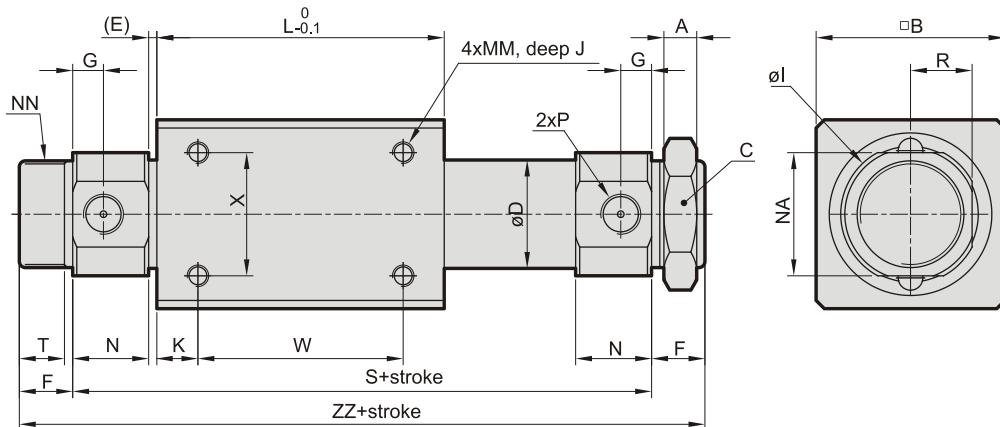

Construction / materials

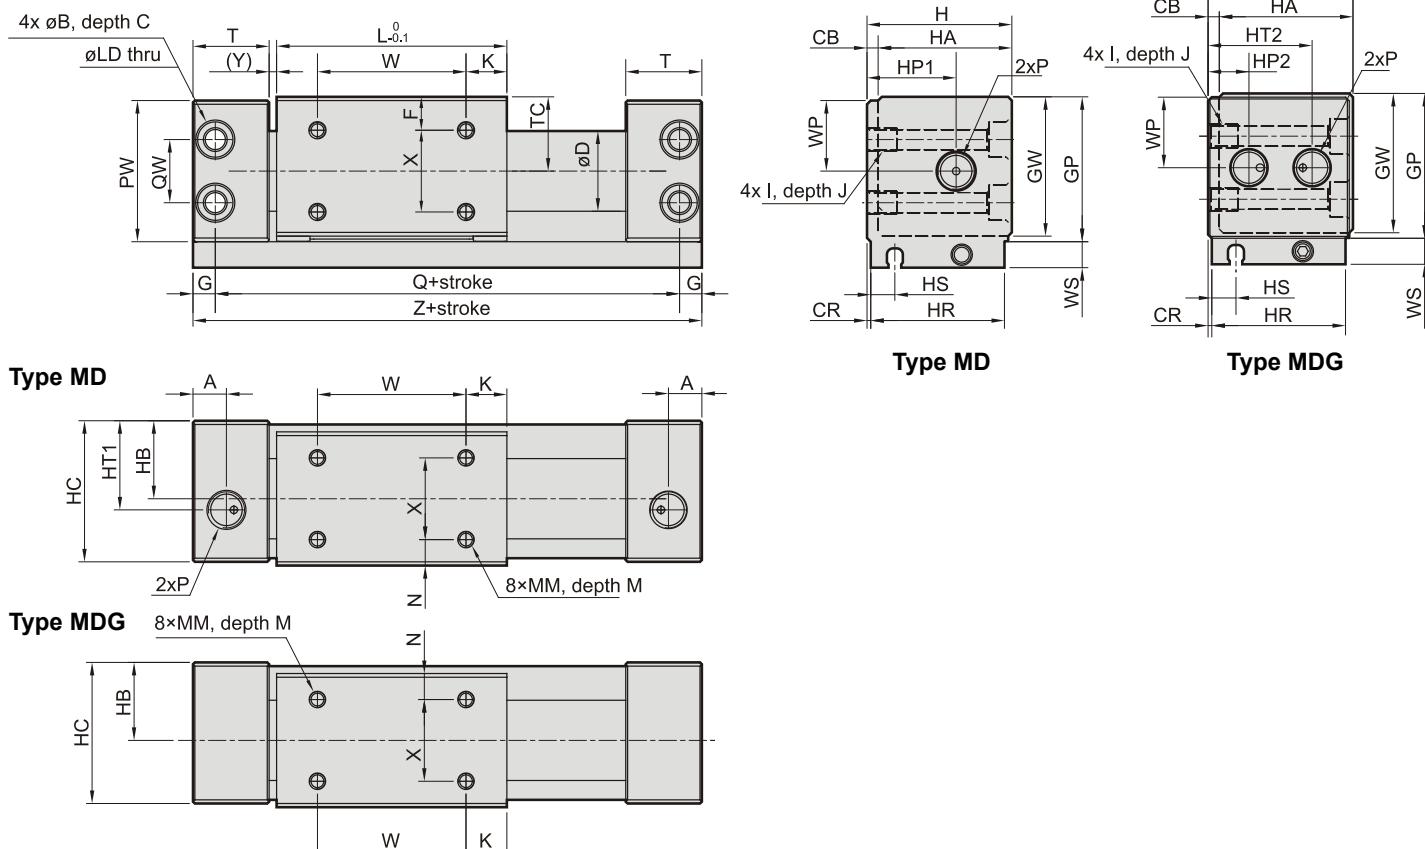

- caps, carriage, rail: anodized aluminium alloy
- tube: stainless steel
- yokes: nickel plated carbon steel
- seals: NBR

In case of proximity sensing request for cylinders with rail, please use switches series RCE/RPE/RNE - see page 3-10 for detail. There is no possible to use proximity sensing for standard cylinders (without rail).

DOUBLE ACTING PNEUMATIC CYLINDERS SERIES MCGB TWIN GUIDE

Cylinders series MCGB are due to heavy integrated bearing predetermined for applications, where is lateral load or torsional moment. It is possible to use them as stopper cylinders, where the slide bearing is used, or as push or lift cylinders, where the linear bush bearing is used. Cylinders are equipped with magnet for proximity switches. There is no adjustable cushioning, for cushioning at the end positions the rubber pad is used. Cylinders series MCGB are with compact design. The air connection is possible from two sides (from the top and side).

Working pressure	0,6 MPa
Min. pressure	0,1 MPa
Max. pressure	1,0 MPa
Temp. range	-5°C to +60°C

DOUBLE ACTING PNEUMATIC CYLINDERS SERIES MCGD TWIN GUIDE, SLIDE

Cylinders series MCGD can be used as cylinders with slide plates or body slide. Cylinders series MCGD are designed as compact makes the air cylinder working more smoothly and showing the characteristics of its high-strength and high-stiffness. Cylinders are equipped with magnet for proximity switches. The recessed groove for sensor switch keeps space saving and interference is avoided. The body and plate are reserved with many holes and threads for mounting. It is suitable for various mounting requirement. There is no adjustable cushioning, for cushioning at the end positions the rubber pad is used.

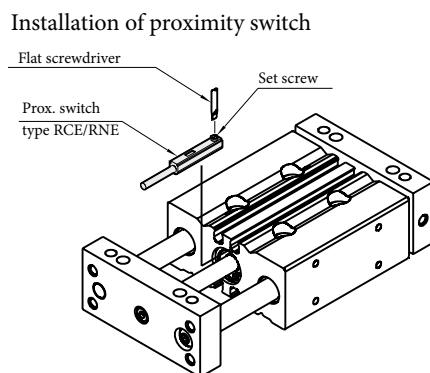

Working pressure	0,6 MPa

Construction / materials

- caps: aluminium alloy
- body: aluminium alloy
- piston rod: carbon steel
- guide rods: carbon steel for slide bearing, bearing steel for linear bush bearing
- plate: aluminium alloy
- bearing: copper for slide bearing, linear bush bearing

In case of proximity sensing request, please use switches series RCE/RPE/RNE - see page 3-10 for detail

Thin and compact double piston rod cylinders series MCDA with high precision guiding are used not only for precision picking and placing. High lateral load can be applied due to highly accurate slide bearing and linear bush bearing. Cylinders are equipped with magnet for proximity switches. The body and plate are reserved with many holes and threads for mounting. It is suitable for various mounting requirement. There is no adjustable cushioning, for cushioning at the end positions the rubber pad is used.

Pneumatic slide cylinder consist of double pneumatic cylinder and integrated work table, which due to the sturdiness and precise of guidance ensures precise positioning. Cylinders are equipped with magnet for proximity switches.

For more information like technical data, allowable load and dimensions, please visit our web page on www.stranskyapetrzik.cz.

i For more information like technical data, allowable load and dimensions, please visit our web page on www.stranskyapetrzik.cz

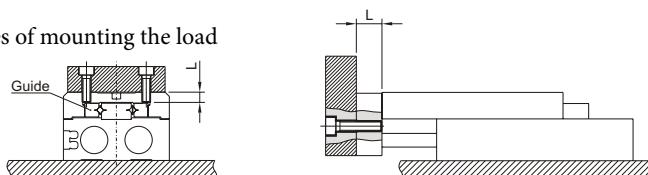

i In case of proximity sensing request, please use switches series RCE/RPE/RNE - see page 3-10 for detail

*) Shock absorber isn't available for piston diameter 6 mm

Examples of mounting the cylinder

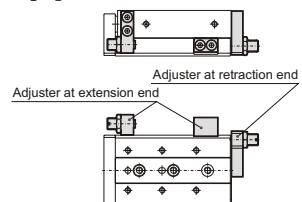

Examples of mounting the load

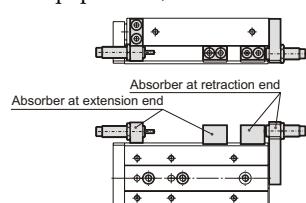

Note: the range of stroke adjustment is 5 mm as standard, ranges 15 and 25 mm are optional.

Equipment A, AS and AT:

Equipment B, BS and BT:

Stopper cylinders are used for safety stop or separation of objects which moves on belt, roller, chain or other conveyor. Regarding the series (see description below), the cylinders can be equipped for example with hydraulic shock absorber for soft stop of moving object, or with spring for automatic separation of two objects.

For more information like technical data, order codes, allowable load and dimensions, please visit our web page on www.stranskyapetrzik.cz

In case of proximity sensing request, please contact our technical dept. for details

With shock absorber

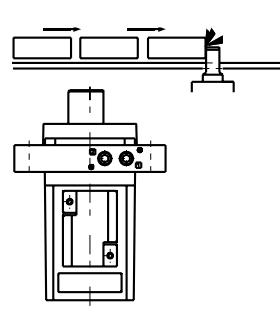

The built-in shock absorber softly catches and stops the work carrier. The strength of absorber can be easily adjusted, which makes the cylinder work in the best condition, conforming to the speed of the conveyor line and the weight of the work carrier.

With roller

The top rollers with the built-in spring return in touch with the bottom of the work carrier. Automatically returns up to the original position as the work carrier pass by, and immediately works as a stopper for the next work carrier. Therefore the timing carriers does not need to be taken.

For direct stop

Rod and cylinder are designed for toughness against the large side load. Also suitable for the relatively slow-moving conveyor line with the heavy work carriers.

Cylinders are designed to meet the specifications of international standards ISO 6431, VDMA 24562 and NF E 49003.1, that is why it can replace pneumatic cylinder, which is made by any producer to these standards. The cylinders can work in higher temperatures by request. There is no cushioning at the end of stroke.

SINGLE ACTING PNEUMATIC CYLINDERS COMPACT

Compact cylinders are smaller than standard cylinders and they are suitable especially, when there isn't enough space for standard cylinder. Dimensions of mounting holes meets international standards ISO 6431, VDMA 24562 and NF E 49003.1, that is why standard mounting accessories can be used. Cylinders aren't equipped with cushioning.

Weight [kg]	0,4	0,5	0,7	1,6
Recommended hose orifice of air supply [mm]	8	10	10	12
Minimal tightening torque of fixing screws [Nm]	10,4	25	25	51

Order codes

2100 91 0 00 025 0000

Installation and operation notes

There is necessary to adhere minimal tightening torque of fixing screws (see values in table above). Fixing screws aren't included in supply. We recommend to fix fixing screws with Loctite 242E or similar adhesive.

There is necessary to check right tightening of fixing screws regularly to prevent their releasing.

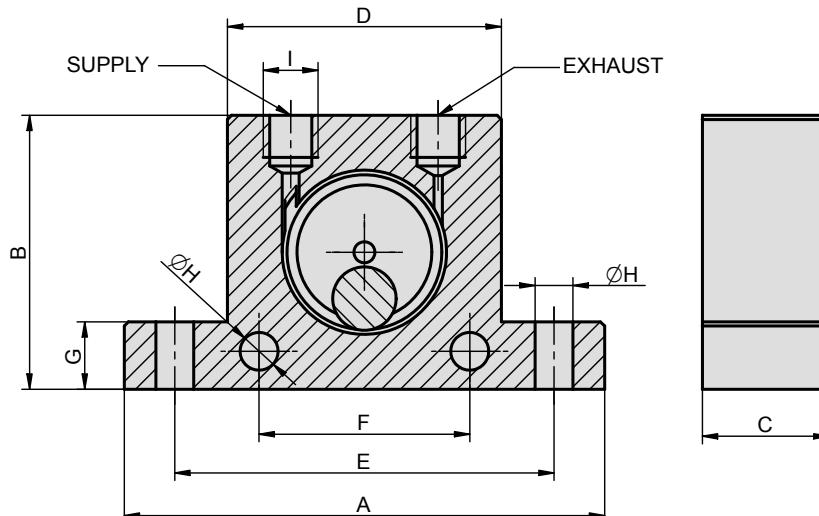

The silencer is required on exhaust to avoid excessive noise. The silencer must be kept clear otherwise danger of vibrator body failure and injury impend.

Compressed air supply must be connected to port marked as V (eventually VSTUP, IN, or 1).

Construction / materials

- body and caps: hard anodized dural
- ball: precise bearing ball
- ball guide: hardened steel

Air consumption [l/min]	83	145	195	122	200	280	160	280	425	260	475	675

Recommended connection

There is useful to use pressure regulator in circuit to enable vibration intensity regulation. If you need to start vibrator by another way than manually, there is necessary to use appropriate 2/2 or 3/2 valve which should be connected between pressure regulator and vibrator.

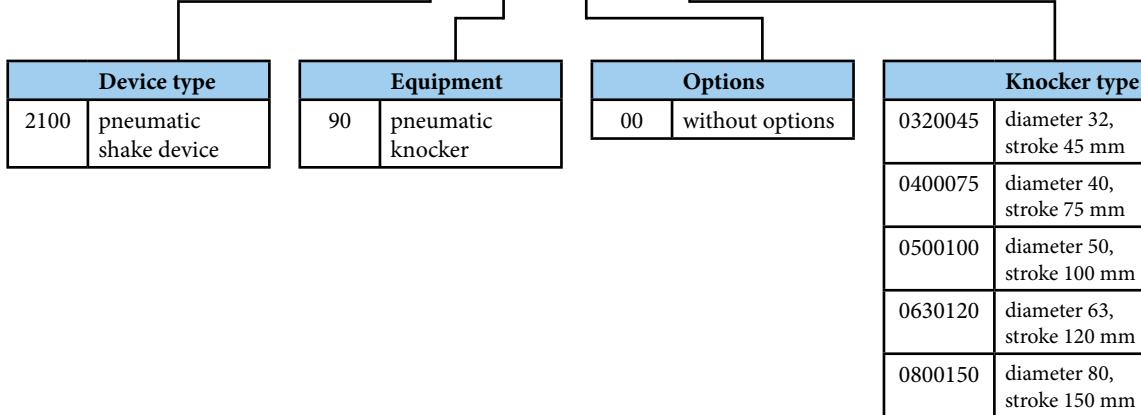

Pneumatic knocker could be used for bulk material release if the bulk material was adhesed on walls of tubes or filling hopper. Compared to ball vibrator, knocker can be used for materials which solidify by intensive shedding; in this case individual shakes are well-proven. Knocker should be controlled as well as double acting cylinder. From piston diameter 50 mm incl. knockers are equipped with fully adjustable cushioning at end of return piston movement.

63	332	15	G3/8"	G3/8"	119	75	45	85	40	10,5	20	38
80	368	20	G3/8"	G3/8"	138	95	55	100	50	13	20	38

Recommended connection

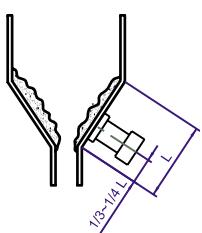

The 5/2 valve is suitable for knocker control. Valve should be placed as closest to knocker as possible, but we recommend to fix it so that valve will be isolated to shocks from knocker. We recommend to use quick exhaust valve on exhaust (mounted parallel to knocker's axis to prevent from shocks) so as not to decrease impact intensity. It is suitable to use speed control silencer during piston return movement, to get possible to control of return speed of piston into home position to prevent chocks.

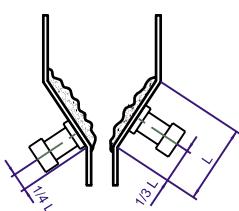

Attention: knocker is designed for make shocks only by movement of piston towards to front cap with flange! Do not allow to make shocks during piston return movement in any case! It may be the cause of permanent damage of end cap of knocker!

Mounting examples

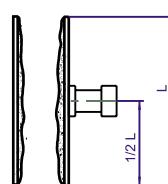

Single knocker on filling hopper

Two knockers on filling hopper
(edge distances should be different)

Single knocker on tube

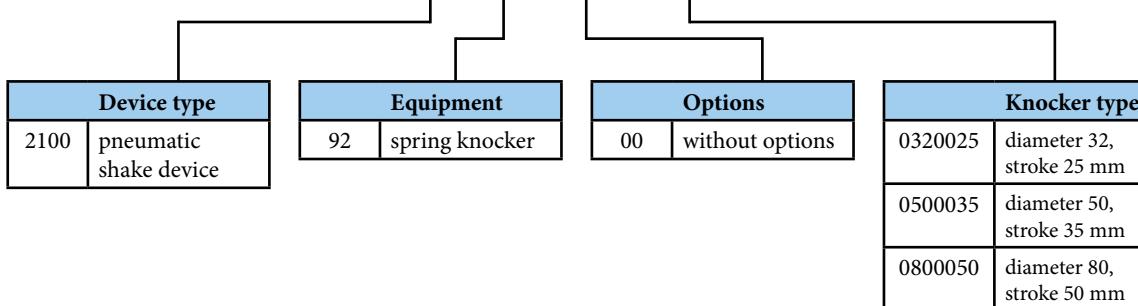

Pneumatic knocker could be used for bulk material release if the bulk material was adhesed on walls of tubes or filling hopper. Compared to ball vibrator, knocker can be used for materials which solidify by intensive shedding; in this case individual shakes are well-proven. The principle is simple: by pressurize of air chamber the spring is pre-tensioned and by air exhausting the spring causes the impact. This system should be used, when there is no sufficient flow rate in the line for standard pneumatic knockers without springs.

Working pressure	0,6 MPa
Min. pressure	0,4 MPa
Max. pressure	1,0 MPa
Temp. range	-20°C to +80°C
Working medium	modified compressed air

Air cannon, volume 2 litres	4500 2608 4406 0002
Air cannon, volume 8 litres	4500 2608 4406 0001

Installation and operation notes

We recommend to fix fixing screws with Loctite 242E or similar adhesive.

There is necessary to check right tightening of fixing screws regularly to prevent their releasing.

The quick exhaust valve is included in delivery, compressed air should be connected to the quick exhaust valve.

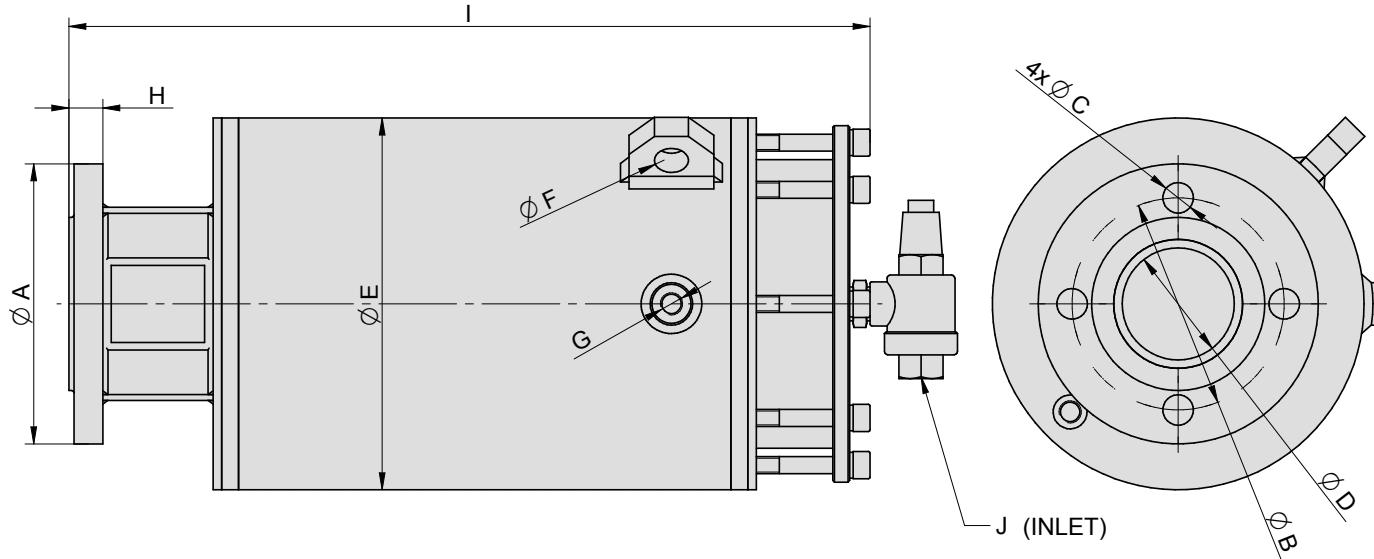

The air cannon must be fixed by restraining cable to the vessel.

Installation must be done accordingly to the users manual.

Construction / materials

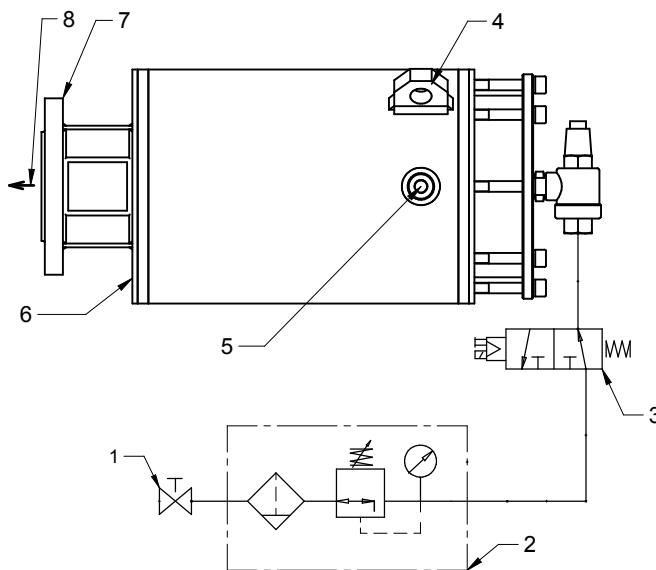

- body, end cap: steel, ground coat
- tube: extruded dural tube
- piston: plastic
- sealing: NBR

Dimensions

Volume	A	B	C	D	E	F	G	H	I	J
2 litres	90	65	11	20	133	12	G1/4"	14	367	G3/8"
8 litres	165	125	18	66	219	20	G1/4"	20	472	G1/2"

Recommended connection

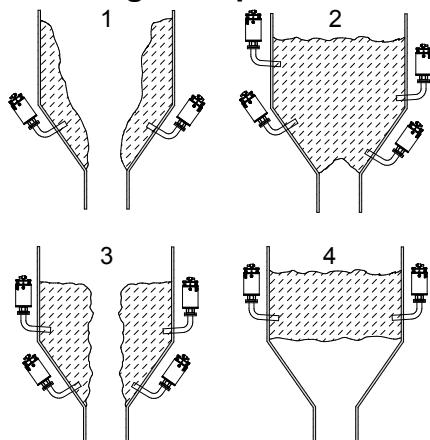

The 3/2 valve is suitable for air cannon control. The force of air cannon does not depend on distance between air cannon and valve. We recommend to mount the valve outside, where the air cannon's shocks couldn't reach the valve.

Position	Description
1*	shutting-off valve
2*	filter with pressure regulator
3*	3/2 normally open valve
4	shackle for installing restraining cable
5	plug G1/4" - for example for gauge
6	draining screw
7	flange connection
8	direction of air shot

Items marked by asterisk (*) are optional - they have to be ordered separately.

Mounting examples

There are four main problems associated with interruption of free flow of bulk solids in bunkers, hoppers, silos transfer chutes etc., as shown in Figs. 1, 2, 3 and 4. Please note these illustrations are for general information only, there being various other blocking scenarios which occur

1) Clinging

Material deposits clinging to the sides of hoppers, reducing free-flow and creating the possibility of contamination of new material if clinging deposits break free from sides of vessel.

2) Bridging

Blockage at the outlet of the storage hopper resulting in complete loss of production. This is a common fault where fine materials are being processed and the moisture content is higher than normal.

3) Ratholing

An extreme form of clinging, reducing free-flow and requiring regular topping up of small quantities of material. Loss of production will be the result of this condition and the solution, i.e., high pressure lance vibration etc., can result in huge lumps of material breaking away and blocking the outlet.

4) Arching

Type of bridging occurring at a high level within the hopper. This condition creates a dangerous situation for operators when trying to clear the blockage and also a possible maintenance /damage issue for the works engineer and the high costs resulting from the loss of production.

PNEUMATIC SWING CLAMP CYLINDERS SERIES MTAD AND MTAS

Swing clamps are used when it is required to keep the fixture workpiece area free of straps and clamping components for unrestricted workpiece loading and unloading. This pneumatic clamping element is a pull type cylinder, there are five standard sizes and for each size two versions od standard clamping arms, mounting of these clamping arms at any angle within 360°.

For more information like technical data and dimensions, please visit our web page on www.stranskyapetrzik.cz.

Pneumatic-hydraulic boosters are used for generating high force using standard air pressure. They are designed to save energy, time, space and money in wide variety of applications. These abilities and benefits of power cylinders make them ideal component in many applications, you can use them for such operation as marking, forming, punching riveting, shearing, steaming, straightening, and so on.

Operating principle of double pressure booster MHBD

This type of booster is used for applications, where the auxiliary stroke with low force and working short stroke with big force is needed. Working stroke then conform to the oil volume, which is discharged by booster. Auxiliary stroke depends on volume of external air-hydro converter (which isn't in the supply).

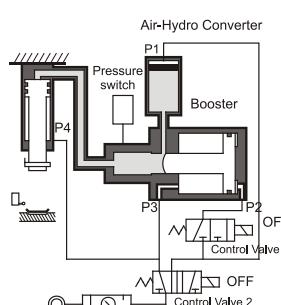

Quick traverse

When the air is charged from the port P1, the oil in the tank will forward the hydraulic cylinder quickly. The pressure is the same as the air pressure, but the inflow of oil is large in volume.

Intensified feeding

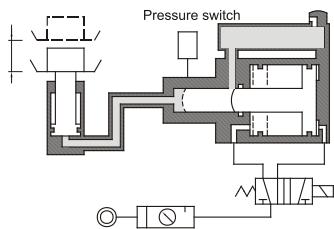

When the air is charged from the port P2, a ram will advance. the highly pressured fluid will come in to the hydraulic cylinder which will be forwarded by large thrust.

Swift release

When the air is send into port P4 and P3, the hydraulic cylinder is swiftly reversed. and at the same time the ram goes back.

Operating principle of single pressure booster MHBS

Booster can be used for short stroke hydraulic cylinders, for which is volume discharged by booster sufficient. In this case, any 5/2 valve can be used for control of booster and hydraulic cylinder, which copy the movement of booster.

Notice

- booster must be levelled
- booster must be placed higher than hydraulic cylinder
- frequency of use should be 6 times/min or lower

For more information, please visit our web page on
www.stranskyapetrzik.cz.

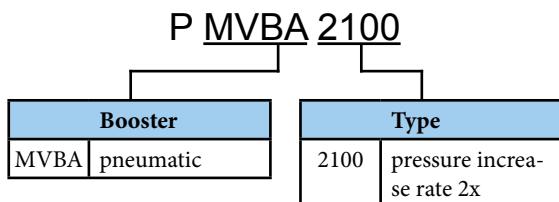

Pneumatic booster regulators series MVBA are used for increasing of air pressure. These booster regulators are able to twice increase inlet pressure, but due to safety, the maximal output pressure is restricted up to 0,99 MPa. Boosters can be used in applications, where there is no sufficient pressure in regular distribution. The advantage is, that no additional power is required, so also heat generation is reduced. They are fully autonomous and they start to „produce“ high pressure air, when compressed air is brought to inlet port.

Working (supply) pressure	0,1 to 0,99 MPa
Temperature range	+2°C to +50°C
Working medium	modified compressed air
Installation	horizontal

Type	MVBA2100
Connection	G3/8" (exhaust port R3/8")
Pressure increase rate	2
Supply pressure [MPa]	0,1 to 0,99
Operating (output) pressure [MPa]	0,2 to 0,99
Flow capacity [NL] at supply pressure 0,5 MPa and output pressure 0,8 MPa	560
Weight [kg]	3,9

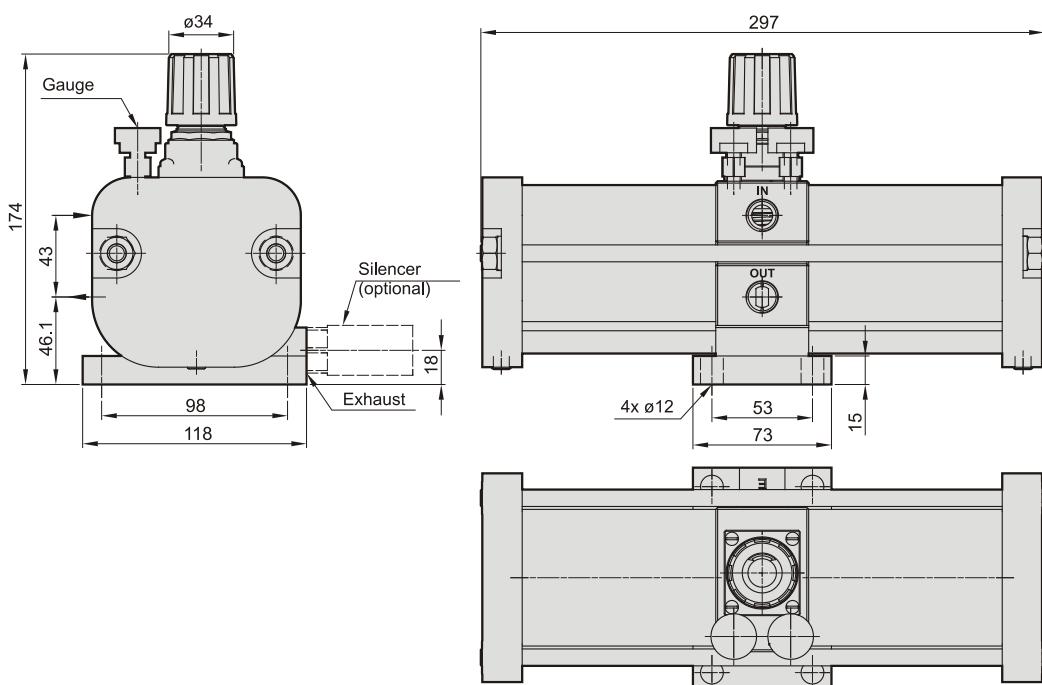

Order codes

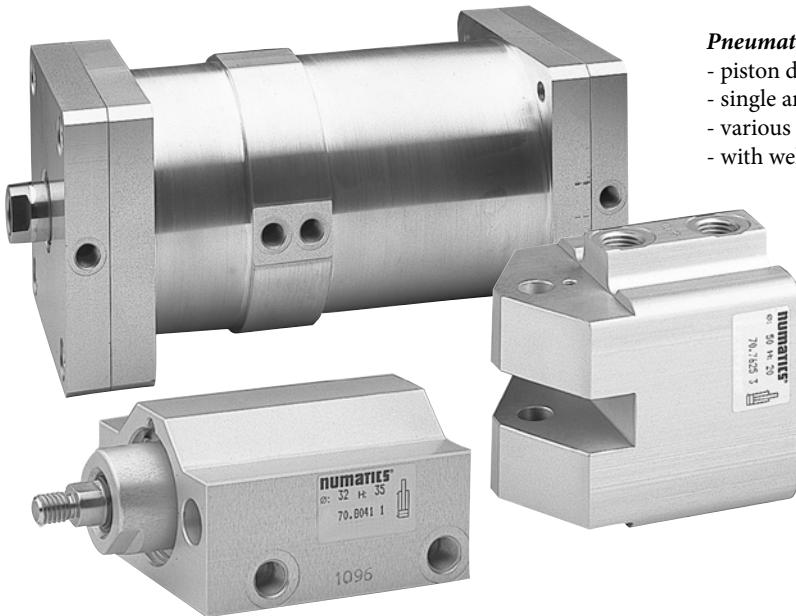

Operation notes

- If the outlet capacity is undersized, pulsation may occur.
- Make sure to install a mist separator at the inlet side of the booster regulator, supply air must be dry - non lubricated
- The booster regulator has a sliding part inside, and it generates dust. Also, install a cleaning device such as an air filter or a mist separator on the outlet side as necessary.
- Depending on the necessity, install a silencer on the exhaust port of the booster regulator to reduce the exhaustion sound.
- Provide a dedicated pipe to release the exhaust air from each booster regulator. If exhaust air is converged into a pipe, the back pressure that is created could cause improper operation.

Dimensions

We also produce cylinders to customer's request:

Pneumatic cylinders for welding applications in automotive industry

- piston diameters from 20 to 125 mm
- single and double acting
- various strokes incl. more stroke design (boxer)
- with welding sparks sealing protection

Pneumatic cylinders to customer's request

- piston diameters from 8 to 600 mm
- single and double acting
- various strokes incl. more stroke design (boxer)
- various material construction incl. stainless steel
- possibility of various surface finishing
- various types and materials of gaskets

KT-xxP series of electronic (PNP) proximity switches eliminates negative features of reed relays. Those switches are fully electronic, which brings excellent properties, long lifetime and integrated protections. We also offer reed switches, series KT-xxR. Series KT switches can be used with all types of Stránský a Petržík's cylinders. For various types of cylinders the right bracket must be used. Switches KT-50 can be used with cylinders with T-slot made by other producer.

These proximity switches are produced as reed switches or electronic switches. Advantage of these switches is that they can be used with all types of Stránský a Petržík's cylinders. It means, that there can be used not only several diameters but also more types of cylinders (VDMA, compact, DIN ISO, etc.) in pneumatic circuit and for all cylinders only one type of switch can be used (it is necessary to select proper bracket for various types of cylinder - see table bellow). It brings cost savings at designing electrical circuits, at connection as well as at circuit maintaining.

Switch can be used with cylinders with T-slot made by other producers.

How to fix switch on cylinder and which series for which cylinder type

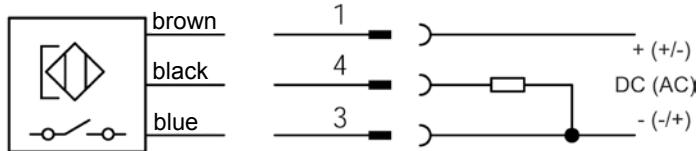

Pneumatic cylinder type	Switch can be used					
	directly	with bracket	with bracket for dovetail groove	With bracket for tube		
				up to Ø25	up to Ø63	up to Ø125
VDMA 24562		✓				
Compact, ISO 15552 (order code 10201...), short stroke Ø160 and 250 mm	✓					
DIN ISO 6432, PDSW, anti-corrosive - hygienic clean				✓		
Short stroke, Ø20 to 100 mm				✓		
Rotary actuator, Ø 20 to 40 mm					✓	✓
Rotary actuator, Ø50 and more mm		✓				
With guide unit U or H*		✓			✓	✓

* We recommend to use bracket for tube with cylinder with guide unit, to provide sensing in section, where the guide unit is mounted. The guide body inhibits using of bracket for tie rod / profile. On the other side, or in the area out of guide body, bracket for tie rod / profile can be used.

This series of switches uses only reed relay. It is necessary to select proper switch series for specific type of cylinder. SP2 switches are for pneumatic cylinders to DIN ISO 6431 (piston diameter 32 to 200 mm) and to VDMA 24562 (piston diameter 125 to 320 mm). Switches are fixed by M6 screws on tie rod dia. 4,5 - 12 mm. SP4 switches are for short stroke cylinders (piston diameter 20 to 100 mm). They are fixed so, that mounting strip (included in pack) and switch are inserted into groove side by side. Then switch is moved to required position and by the help of e.g. screwdriver the mounting strip is moved below switch, which will be fixed in position by tightening of screw. These switches can be used with cylinders with round tube; in this case carrier should be used (included in pack). SP5 and SP6 switches are for pneumatic cylinders to VDMA 24562 (piston diameter 32 to 100 mm). Switches are fixed by M5 screws on tube profile with width 10 to 16 mm.

Technical data

Description	Value

Connection

Rules for using with inductive load

Parameters of SPx contacts are defined for using with ohmic load. When inductive load or load with inductive component is switched, these parameters (max. voltage) are exceeded. To secure proper function, the influence of overvoltage must be reduced by using of diode or RC circuit, overvoltage protection (varistor, transist) or their combination.

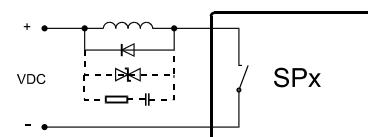

Max. allowed value of switched current and voltage are at least 50% lower, when inductive load is switched. When the values are near to max. allowed parameters, we recommend to check if $U_{\text{max}}^2/R_{\text{DC}} < \text{max. allowed switching power}$. R_{DC} is ohmic resistance of load measured by DC voltage, U_{max} is switching voltage amplitude.

Contacts protecting when DC voltage is used:

Parameters of protective elements:

DIODE must be projected for current passing the circuit and cut off voltage of diode must be twice to switching voltage.

VARISTOR must be projected to 1,5 multiple of switched voltage.

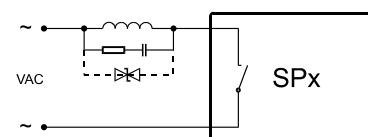

Contacts protecting when AC voltage is used:

Parameters of protective elements:

CAPACITY of capacitor is recommended to 0,05 to 0,5 μF , capacitor type MP for min. 3x Uef switched voltage.

VARISTOR must be projected to 2,5 multiple of effective value of switched voltage.

PROPORTIONAL POSITION SENSOR SERIES MPS WITH ANALOG OUTPUT

Proportional position sensor with analog output (current as well as voltage) is suitable for application, where it is necessary to know exact position of the piston. It is compact sensor, which can be fixed into the T slot. It is fully electronic sensor, which brings excellent properties, long lifetime and integrated protections. There are several types with various measuring range available for various cylinder strokes. If the cylinder stroke is smaller than measuring range, the starting and end position can be adjusted by user on the sensor.

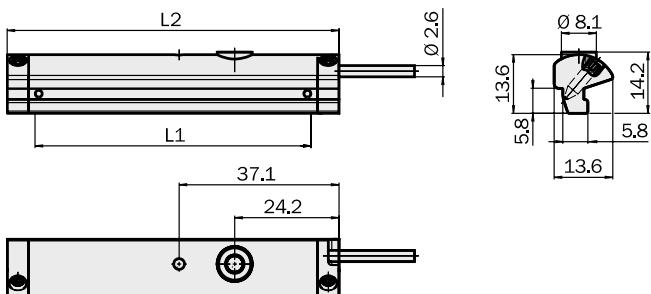

Technical data

Description	Value
Supply voltage U_b [V]	10 to 30 DC, $\pm 10\%$
Continuous current I_a [mA]	25
Max. load resistance, current output [Ω]	500
Min. load resistance, voltage output [$k\Omega$]	2

RPE and RNE series of electronic (PNP and NPN) proximity switches eliminates negative features of reed relays. Those switches are fully electronic, which brings excellent properties and long lifetime. We also offer reed switches, series RCE. All series switches can be used with cylinders series M*.

Technical data

Description	Value / Switch type		
	RCE (reed switch)	RPE (solid state switch, PNP)	RNE (solid state switch, NPN)
Supply voltage U_b [V]	5 to 230 DC or AC	5 to 30 DC	5 to 30 DC

1) Except piston diameter 50 mm - in this case please contact our technical dept.

2) Except piston diameter 20 mm - in this case please contact our technical dept.

3) Except piston diameter 20 and 50 mm - in this case please contact our technical dept.

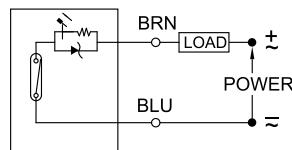

Warning

Do not exceed specification, permanent damage to the sensor may occur.

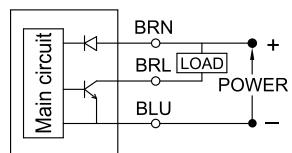

Rules for using of proximity switches

- For reed switch type sensors, polarity must also be observed for the proper functioning of LED. Connect the brown wire in series with load positive (+) and the blue wire to negative (-) of power source. If the polarity is reversed, reed switch remains functional but LED will remain in "OFF" state.

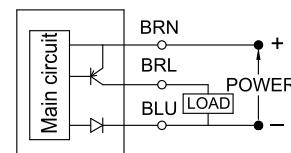

- For solid-state type sensors , polarity must also be observed . Connect brown wire to the positive (+) and the blue to the negative (-) of DC power source. The black wire must connect to the load only. If the black wire is accidentally connected to the power source, permanent damage to the sensor may occur.

(NPN Output)

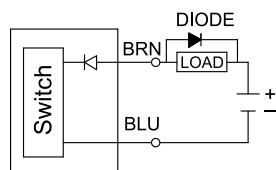

(PNP Output)

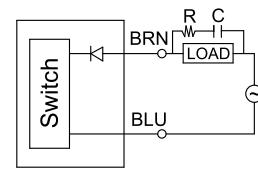

- An external protection circuit may be required if the reed switch is used with inductive load. For DC voltage, the diode must be connected, for AC voltage, the RC circuit must be connected as shown below.

DC Power

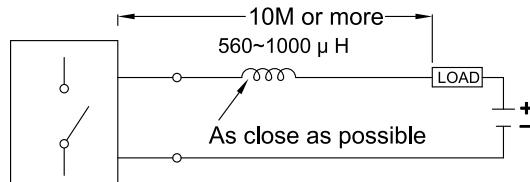

AC Power

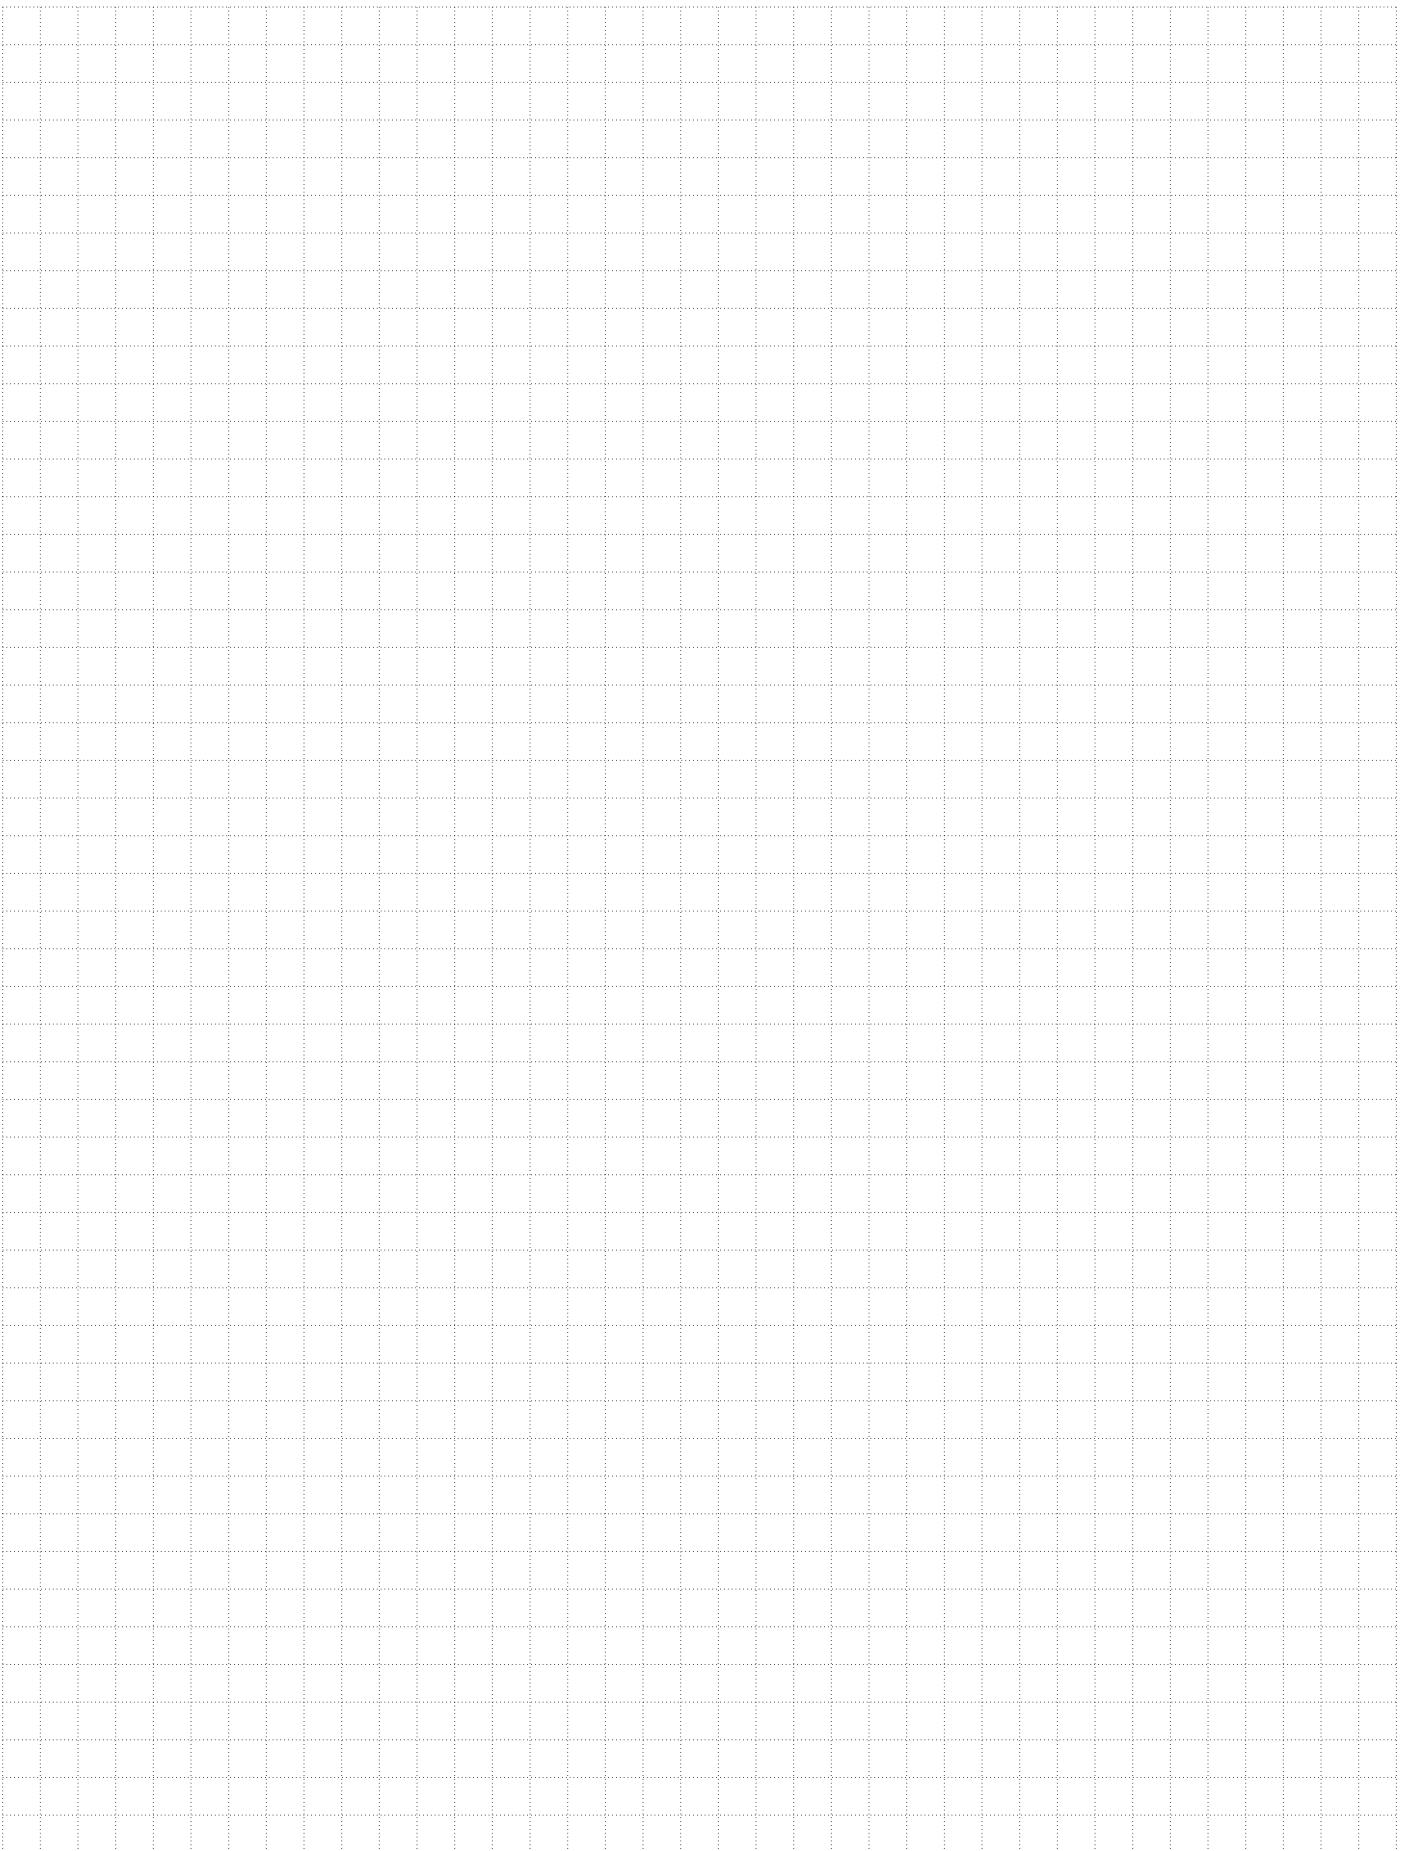

R: 2,7K Ω
C: 0,1μf/600V

- Keep sensors away form stray magnetic field to prevent malfunctions.

- When using reed switch with capacitive load or if the lead wire length exceed 10 meters, an inductor must be installed in series.

GUIDE UNIT „H“ WITH BALL BEARINGS

FOR CYLINDER

- ISO 15552, VDMA 24562, NF E 49003.1
- DIN ISO 6431, VDMA 24562, NF E 49003.1
- COMPACT
- DIN ISO 6432

Supply contain:

- 1 pc guide body
- 1 pc flange
- 2 pcs guide rods
- 1 pc flange for fix to the cylinder

Guide unit can be mounted to any pneumatic cylinder to VDMA 24562 (there is necessary to use option 13 for cylinders with magnetic piston dia. 32 to 63 mm), ISO 15552, compact cylinders or DIN ISO 6432. Guide secures piston rod against rotation, high torque loads and radial forces. Guide rods are mounted in ball bearings without clearance.

Order codes

2101 500 00 050 0100

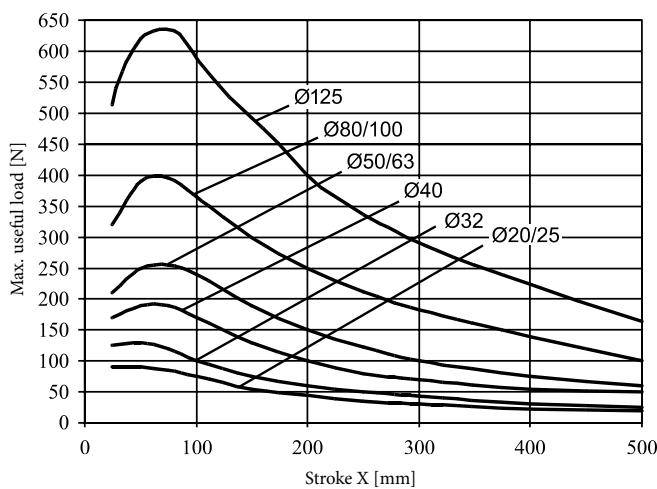

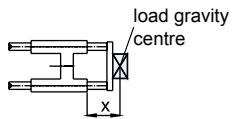

Guide unit H	
2101	for cylinder DIN ISO 6431, VDMA 24562, NF E 49003.1

VALVE BRACKET FOR CYLINDER

- ISO 15552, VDMA 24562, NF E 49003.1
- DIN ISO 6431, VDMA 24562, NF E 49003.1
- COMPACT

Supply contain:
1 pc bracket
2 pcs screws

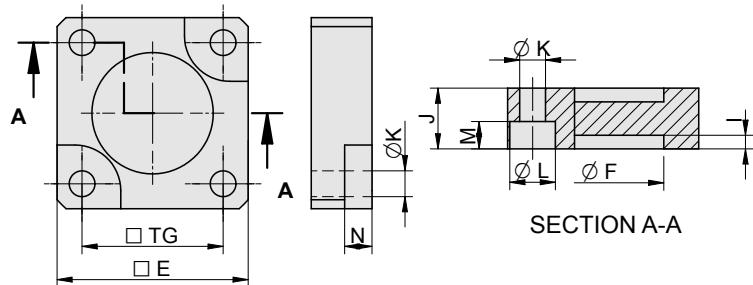

Valve bracket should be fixed on front or rear cap of cylinder. Bracket is universal, it means, that any valve can be attached on it - it is necessary to drill fixing holes in bracket according to the holes in valve. This simple but practical bracket should solve not only the problem with placing of valve in application, but it helps to better look and compact impression of application (it is not necessary to lead and fix tubes for inlet and outlet of cylinder).

Piston Ø	A	B	D	G	H	Weight	Order codes

BOXER FLANGE MOUNTING FOR CYLINDER

- ISO 15552, VDMA 24562, NF E 49003.1
- DIN ISO 6431, VDMA 24562, NF E 49003.1
- COMPACT

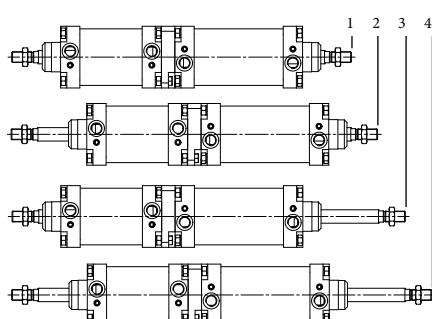

Supply contain:
1 pc flange
4 pcs screws

Using the boxer flange mounting, the 2 cylinders can be mounted together by end caps, so the piston rods will move against each other. If the cylinders will have the same stroke, the final assembly will have 3 positions when cylinders will be in end positions. When the cylinders will have various strokes, the final assembly will

have 4 positions.

Attention: the body of cylinders are moving in this assembly, so it is necessary to use flexible air connections.

PISTON ROD PROTECTIVE COVER

- FOR ALL CYLINDER TYPES
- FOR ANY EQUIPMENT

Supply contain:
1 pc protective cover

Size	D	E	For cylinders Ø	Number of annulus for 100 mm stroke	Width of 10 pcs annulus	Order codes
5	20	60	32, 40	10	10	2195 0000 5 zzzz xxx
4	40	80	50, 63, 80	8	10	2195 0000 4 zzzz xxx
3	50	130	100, 125	4	10	2195 0000 3 zzzz xxx
2	60	155	160, 200	3	10	2195 0000 2 zzzz xxx
1	100	180	250, 320	3	10	2195 0000 1 zzzz xxx

Notice: zzzz means cover stroke in mm, xxx is ordinal number, which will be assigned by sales dept. on the base of A,B,H and I dimensions.

Material: double-sided hyped-up fabric, water, oil and dust resistant

Temperature range: -20 to +80°C

Covers are fixed by clamps - there is necessary to select proper size according to diameters, to which will be the cover fixed

We produce protective covers to customer's request (length, form, flange form). If you need protective cover for our pneumatic cylinder, just let us know order code of that cylinder and order code of mounting accessories, which is mounted on piston rod. If you need protective cover for another application, send us a request with dimensions which are important and we will send you offer by return.

--	------

Solenoid actuated valves NUMATICS®

The spool and sleeve assembly is a matched set consisting of a stainless steel spool assembled into a stainless steel sleeve. The steel used is a 440C stainless hardened to 62 Rockwell „C“. The tolerance is such that air is entrained between the spool and sleeve forming an „airbearing“ effect which ensures safe, wear-free operation with extremely short cycles and low shift forces. At the same time reliability of the spool and sleeve assembly is maintained both for lubricated and non-lubricated air. Under both sets of conditions the spool moves with minimal friction leading to very low shifting forces enabling quick response.

The hardness of the spool and sleeve ensures no damage from pipe scale or other airline contaminants while the stainless steel construction combats any line moisture. These features will allow a typical service life in excess of 200 million cycles. The spool is balanced with respect to air pressure and coupled with the absence of wearing parts allows extreme versatility of valve applications. On NUMATICS valves, the air can flow in any direction at any pressure or vacuum. This unique design enables cylinder working strokes at one pressure while unloaded reverse strokes can be carried out economically at low pressures.

Solenoid actuated valves MINDMAN

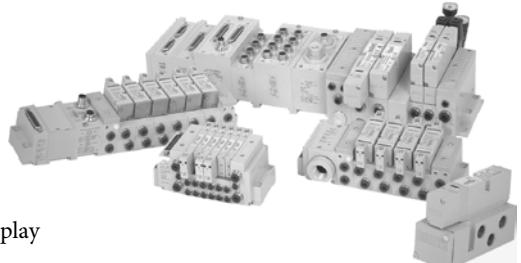

We add the Mindman valves into our offer as the reasonable and high-quality supplement of Numatics valve. Those pilot operated valves with classic slide and rubber gaskets are offered as 3/2 normally closed, 5/2 with single or double solenoid and 5/3 with closed centre position, which is comparable to Numatics spool and sleeve assembly, 100% leakage proof, 5/3 with exhaust centre position and position with pressure centre. Valves with rubber gaskets can not be compared to valves with spool and sleeve assembly regarding lifetime, but their lifetime is sufficient for lot of small and mid-range applications.

Valves with Buslink electronics (BUS systems)

Numatics valves are available also with Buslink electronics. There is a new generation of electronic modules available called G3, which can be used with valves series 2002, 2005, 2012, 2035, ISO 15407-2 and ISO 5599/2. There is a short characteristics of particular Buslink technology which are implemented into Numatics valve islands:

- completely wireless solution, no inside cable wiring
- up to 256 inputs and 544 outputs (1200 bits) capability with one communication node
- up to 16 distributed manifolds with max. 30 m backplane extension length, distributed plug&play design, no configuration required
- extended on-board diagnostics incl. status of particular I/O and short circuit protection
- I/O modules connectable to valve side
- back-plane technology allowing easy upgrade and quick replacement and service
- graphic display on each module for easy commissioning, visual status and diagnostics
 - all modules and assembled nodes are tested
 - analog or digital outputs (PNP or NPN)- NEMA4/IP65
 - low cost upgrade and expansion
 - remote inputs and outputs connection available
 - for more information about BUS systems please contact our technical dept.

Wide range of valves

You can find overview of the most common valves in this catalogue. But there is lot of variants of these standard valves as well as other valve series, which are designed for special purposes (e.g. for high temperatures etc.). In case, that the series/type of valve doesn't meet your criteria, please ask our sales dept. for detailed Numatics catalogue. In this catalogue you will not find for example the following valves:

series P, NAMUR interface

ISO Compact with M12 connector

slow-start ISO 3

series CL18 and CL26

3/2 ISO valves

adapter for series 2005/2012 valves to ISO 15407-2

4/2, 5/2 a 5/3 function valves - valve properties and selection table

*) Valve connection:

- 1 - in-line
- 2 - individual base
- 3 - manifold block

**) Valves are available with explosion proof solenoids too.

***) Working pressure may be higher / lower, when option coils and external pilot supply is used.

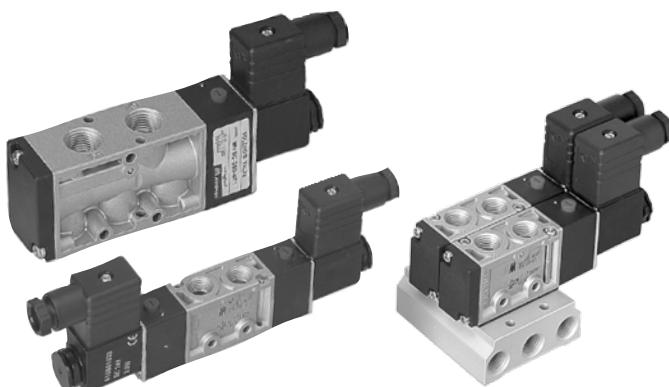

Standard valve series are **highlighted**.

Notice: due to spool and sleeve assembly, minor leakage may occur in 5/3 with closed centre. If you need to ensure 100% leakproof, it is necessary to use valve with rubber packed spool.

Standard valve series are **highlighted**

The popular valve series, which replaces valves series L and J. The basic usable features are kept and brings some improvements such as lower wattage, comparable or bigger flow capacity and better accessibility. Valves are solenoid pilot actuated. The product range covers functions 5/2 single or double solenoid and 5/3 with centre closed and exhaust position and position with pressure centre. Connector and coil are included in delivery.

This valve series contains rubber gaskets.

Series	MVSC 220	MVSC 300	MVSC 460
Ports	G1/4" (G1/8" for exhaust port 3 and 5)	G3/8"	G1/2"
Flow capacity [NL/min]	980, or 860 for function 5/3	1905, or 1355 for function 5/3	2730, or 1630 for function 5/3
Working pressure [MPa]	0,2 to 0,7, or 0,3 to 0,7 for function 5/3		
Power input [W, VA]	2,5W for DC voltage, 6/4,9VA for AC voltage (inrush/hold)		
Response time [ms]	30, or 40 for function 5/3	50	50
Coil voltage tolerance	±10%		
Temperature range [°C]	ambient temperature -5 to +50		
Enclosure	IP65 with sealed and fastened connector

C460	series MVSC 460, thread G1/2"

Number of positions	
2 to 10	for 2 to 10 valves

Manifolds with internal wiring and common 25-pin SUB-D connector are also available. These manifolds are for valves series 220 and 300. Number of stations is 3 to 12 as standard, maximum is 20. Voltage of coils is 24V DC. For more information about these manifolds, please contact our technical department.

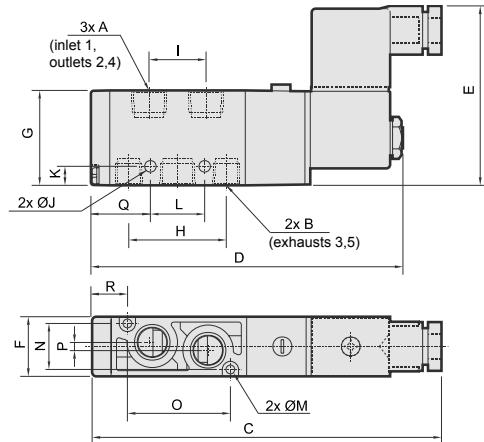

It is possible to mount series MVSC valves on manifold with predefined number of position. It isn't possible to add another position to created assembly - it could be necessary to replace manifold or create another manifold. If there is possibility that more valves will be needed in future, we recommend to use manifold with more positions and use blocking plates for unused positions. Valves are mounted to manifold directly - no adaptor is necessary. Valves mounted on manifold could be unmounted separately by unscrew of 2 bolts, which are accessible from top side (side with ports 2 and 4 of valves). Each separate coil must be wired with separate electrical cable.

Conversion of internal to external air pilot supply of valve series L1 / L2

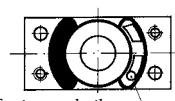

External air pilot supply is used, when air supply pressure is lower than 0,18 MPa (1,8 bar) as well as for vacuum and or if another medium than compressed air is used. It is necessary to order valve which is already prepared for this feature or change standard setting (when air pilot supply is drawn from valve supply port 1) in that cases.

When converting from internal to external pilot supply, please proceed as follows:

- 1) Unmount connector
- 2) Unscrew two M3 (for L1 series) or M4 (for L2 series) bolts, unmount solenoid mounting plate and insert gasket as shown in picture 2
- 3) Check proper gasket setting, re-mount and fasten solenoid mounting plate (torque approx. 1,5 Nm for L1 series and 2,3 Nm for L2 series), put on connector and fix it
- 4) Unscrew plug on side of valve and connect modified compressed air with pressure 1 to 10 bar

Picture 1

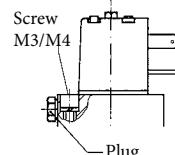

Position of gasket for internal pilot supply

Series L1 / L2 valves manifold assembly

It is possible to mount series L valves on manifold with predefined number of position. It isn't possible to add another position to created assembly - it could be necessary to replace manifold or create another manifold. If there is possibility that more valves will be needed in future, we recommend to use manifold with more positions and use blank station plate for unused positions.

Any valve series L1/L2 may be used for manifold assembly (it doesn't matter if valve is single or double solenoid actuated or air actuated). But it is necessary to use adaptor, which must be mounted between valve and manifold (there is different adaptor for valve series L1 and L2). Valves mounted on manifold could be unmounted separately by unscrew of 2 bolts, which are accessible from top side (side with ports 2 and 4 of valves).

N239-471	Blank station plate
N10.6445	Valve isolating plate to lock port 1
N239-209	Sandwich speed control

Small, direct solenoid actuated valve 4/2 and 4/3 is due to it's compact dimensions suitable for applications, where isn't room for standard valves and where not high flow capacity is required. Valves can be used as standalone or they can be mounted on manifolds. Valves can be delivered with NPTF ports.

Valves series L01 contains spool and sleeve assembly, which guarantee long lifetime of valve.

Note: Inlet/outlet ports in manifold are G1/4" threaded and they are through the manifold (on both sides).

Series Compact is appear from classic ISO valves, but they are cheaper and offer higher flow capacity. Air pilot is used for valve actuating, so it is indirect actuated valve. Valves must be mounted on sub-bases with dimensions according to ISO standard. Coil can be turned so that it will serve the purpose. Valves can be use as standalone with individual base or they can be mounted on manifolds.

Valves series ISO 5599/1 Compact contains spool and sleeve assembly, which guarantee long lifetime of valve.

Series	ISO 1 Compact	ISO 2 Compact	ISO 3 Compact
Flow capacity [NL/min]	1400	2800	4200
Working pressure [MPa]	0,1 to 1,0 , or 0,1 to 1,6 (for pilot type 190) (vacuum to 1,6 MPa when external air pilot supply type 190 is used)		
Pilot pressure range [MPa]	0,1 to 1,0 , or 0,1 to 1,6 (for pilot type 190)		
Power input for pilot type 189 [W, VA]	2,5W for DC voltage, 6VA inrush and 3,5VA hold for AC voltage		
Power input for pilot type 190 [W, VA]	3W for DC voltage, 9VA inrush and 4VA hold for AC voltage		
Response time energize / de-energize [ms]	15 / 35	20 / 35	20 / 90
Temperature range [°C]	ambient temperature -10 to +60

Conversion of internal to external air pilot supply of valve series ISO 5599/1

External air pilot supply is used, when air supply pressure is lower than 0,1 MPa (1 bar) as well as for vacuum and or if another medium than compressed air is used. It is necessary to order valve which is already prepared for this feature or change standard setting (when air pilot supply is drawn from valve supply port 1) in that cases. If supply air is piped to ports 3 or 5, the valve must be converted too. Please find the correct orientation of gasket for your usage in the table below. This process is valid only for valves series ISO 5599/1.

When converting pilot supply, please proceed as follows:

- 1) Remove the end caps
- 2) Remove gasket and position it so that the tab points toward the appropriate port number
- 3) Check gasket installation and install end caps
- 4) If it is necessary, convert second side of valve too

Picture shows the gasket tab orientation for various cases:

	Single solenoid pilot	Gasket tab orientation	
		side 14	side 12
a	internal supply from port 1	1	0
b	internal supply from port 3	0	3
c	internal supply from port 5	5	0
d	external supply from port 12	14	0
e	external supply from port 14	0	12

	Double solenoid pilot	Gasket tab orientation	
		side 14	side 12
a	internal supply from port 1	1	1
b	internal supply from port 3	0	3
c	internal supply from port 5	5	0
d	external supply from port 12	14	0
e	external supply from port 14	0	12

Other accessories

The other accessories for valve series ISO 5599/1 Compact and ISO 5599/1 is available too. For full range catalogue please contact our sales dept. Available are for example the following components:

Pressure regulators with various functions and for various pressures

Adapter plates to mount the respective ISO valves

Valve isolating plate to lock port 1

Sandwich speed control

Non-return plates for port 1

Blank station plates

The new valve series with small space requirements and with improved technical parameters (for example lower power consumption). Versions for direct usage (in-line) as well as manifold valves are available. Valves are solenoid pilot actuated. The product range covers functions 5/2 single or double solenoid and 5/3 with centre closed and exhaust position and position with pressure centre. Connector with 0,5m cable and coil are included in delivery.

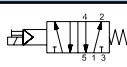

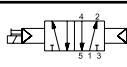

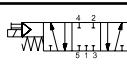

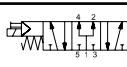

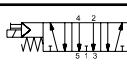

This valve series contains rubber gaskets.

Series	MVSY 100	MVSY 156	MVSY 188
Ports	M5	G1/8"	G1/4"(G1/8" for exhaust port 3 and 5)
Flow capacity [NL/min]	200	630	760
Working pressure [MPa]	0,2 to 0,7	0,15 to 0,7, or 0,2 to 0,7 for function 5/3	
Power input [W, VA]	1,2W for DC voltage, 2,5/1,6VA for AC voltage (inrush/hold), LED indicator		
Response time [ms]	12, or 15 for function 5/3	19, or 32 for function 5/3	23, or 50 for function 5/3
Coil voltage tolerance	±10%		
Temperature range [°C]	ambient temperature -5 to +50		
Enclosure	IP40		

Order codes

188M	series MVSY 188, without threads, for manifold *

Function	
41	 5/2 monostable (with 1 coil)
42	 5/2 bistable (with 2 coils)
42C	 5/3 with closed centre position
42P	 5/3 with pressure centre position
42R	 5/3 with exhaust centre position

Voltage	
D6	6 V DC ± 10%
D12	12 V DC ± 10%
D24	24 V DC ± 10%
A220	230 V AC ± 10%, 50-60 Hz

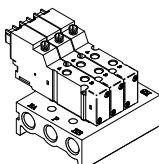

*) These valves are without threaded ports. Threaded ports are on the side of manifold - details see below.

 Connector with 0,5m cable is included in delivery. Available are also connectors with cable:
length 5m ... order code PMVSY-C5
length 10m ... order code PMVSY-C10.

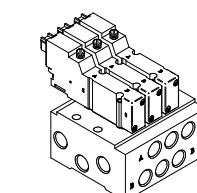

Order codes of manifolds

PMVSY 100 M-5M 4

Size	
100	series MVSY 100
Type	
-5B	valve with threaded ports
M-5M	valve without threaded ports, manifolds with ports
156	series MVSY 156
188	series MVSY 188

Manifolds for valves with threaded ports - PMVSYxxx4... - these valves are with threads on all five ports (ports 1,2,3,4 and 5). In this case, the manifold PMVSYxxx-5Bx, which has only ports 1,3 and 5 is used.

It is possible to mount series MVSY valves on manifold with predefined number of positions. It isn't possible to add another position to created assembly - it could be necessary to replace manifold or create another manifold. If there is possibility that more valves will be needed in future, we recommend to use manifold with more positions and use blocking plates for unused positions. Valves are mounted to manifold directly - no adaptor is necessary. Valves mounted on manifold could be unmounted separately by unscrew of 2 bolts, which are accessible from top side (side with ports 2 and 4 of valves). Each separate coil must be wired with separate electrical cable.

For order codes of blocking plates see page 5-20.

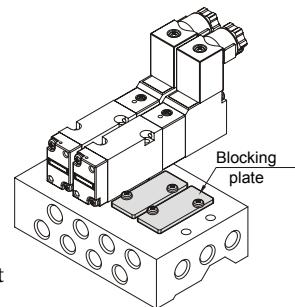

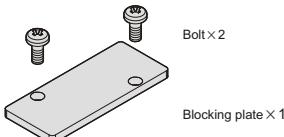

Also available are manifolds for valves without threads - PMVSYxxxM4... - these valves are without threads and ports - they are entirely intended for use on manifold. In this case, common PMVSYxxxM-5Mx, which has common ports 1,3 and 5 and outlet ports 2 and 4 for each valve position, is used. This lay-out simplify assembly and maintenance - valve can be easily unmounted without unplugging of connections on ports 2 and 4.

Order codes of blocking plate for manifolds

PMVSY 100 - 5P

Size	Blocking plate
100	series MVSY 100
156	series MVSY 156
188	series MVSY 188

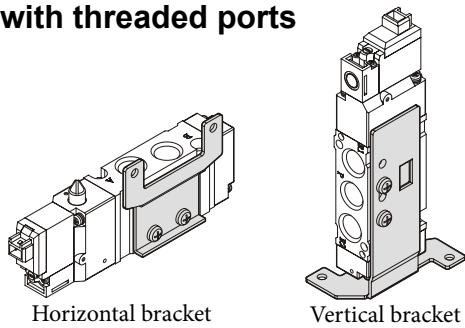

Blocking plates are used for blocking outlets from manifold in case, that not all positions are used presently and expansion of the assembly is planned in the future. In that case, the blocking plate will be changed with valve and manifold is without change.

Order codes of brackets of individual valves with threaded ports

PMVSY 100 - 1A

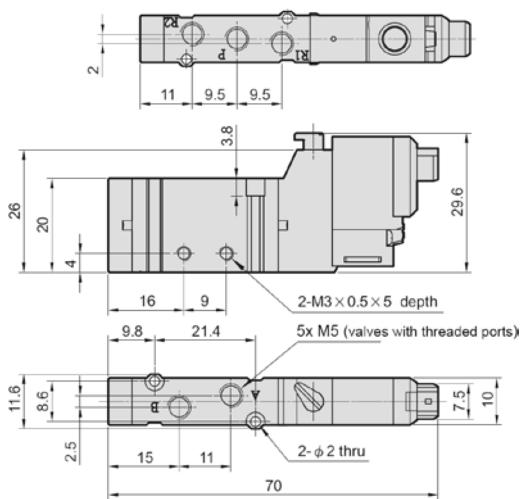

Size	Bracket type
100	series MVSY 100
156	series MVSY 156
188	series MVSY 188

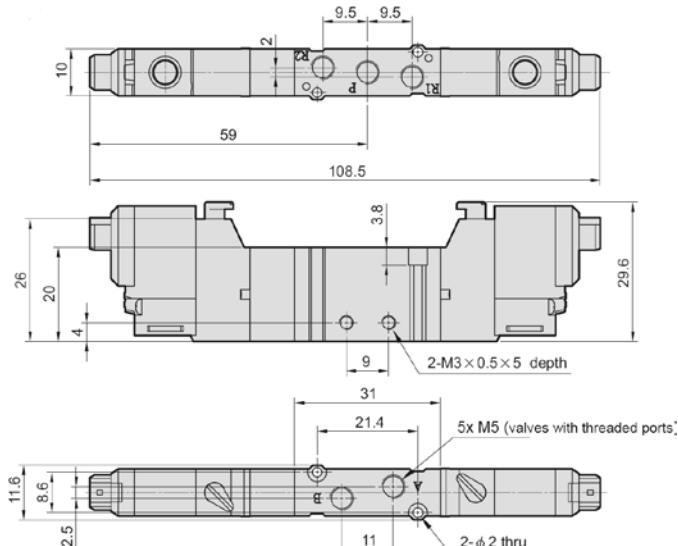

Brackets can be used for individually mounted valves with threaded ports - valves are without through hole for fixing, that is why it is better to use bracket for easy assembly in some cases. Vertical brackets are only for monostable valves (4/2, one coil, function 41).

Series 2002 valves are one of the most state-of-the-art. Well-proven spool and sleeve assembly as well as rubber packed spool versions are available. Valves must be mounted on sub-base and they can be used as standalone or in manifolds. If manifold mounting is used, then electrical signals may be wired separately to each coil or centrally by multipol connector or by electronic control system (BUS controlling).

Valves series 2002 contains spool and sleeve assembly, which guarantee long lifetime of valve, or rubber gaskets.

Series	2002 with spool and sleeve assembly	2002 with rubber packed sleeve
Flow capacity [NL/min]	200	250
Working pressure [MPa]	vacuum to 1,0 for 5/2 and 5/3 valves; 0 to 1,0 for 3/2 valves, vacuum only in ports 3 and 5	
Pilot pressure range [MPa]	0,25 to 0,7 ⁺	
Standard coil power input [W]	0,75	
Response time for DC voltage [ms]	13/6*/8** energize, 13/-*/22** de-energize; 11/10 for 3/2 valve	
Temperature range [°C]	medium temperature max. 50, ambient temperature -20 to +50	

*) Values are valid for double solenoid pilot 5/2 valves (function BB4)

**) Values are valid for 5/3 valves (function BB5/6/7)

*) For rubber packed spool version, the pilot pressure must be at least as high or higher than operating pressure

Series 2005 valves, which belongs to modular and state-of-the art series 2000, offers high flow with small dimensions. Valves are mounted on manifold sub-bases with side and bottom ports. Electrical signals are wired centrally by multipol connector, or by electronic control system (BUS controlling). Speed control valve and pressure regulator are available for mounting between valve and base.

5/2 and 5/3 valves series 2005 contains spool and sleeve assembly, which guarantee long lifetime of valve, 3/2 valves contains rubber gaskets.

Series	2005
Flow capacity [NL/min]	560

Series 2035 valves, belongs to modular and state-of-the art series 2000. This series has big flow capacity and is suitable for large diameter cylinders applications. Valves are mounted on manifold sub-bases with side and bottom ports. Electrical signals are wired centrally by multipol connector, or by electronic control system (BUS controlling). Speed control valve and pressure regulator are available for mounting between valve and base.

Valves series 2035 contains spool and sleeve assembly, which guarantee long lifetime of valve.

SOLENOID ACTUATED HIGH FLOW VALVES

High flow valve series with flow capacity up to 28 000 Nl/min is suitable for fast air supply of big appliances, or higher quantity of appliances which are supplied from common distribution. Valves are pilot operated, using smaller, standard electromagnetic actuated valves ISO 5599/1. These pilot valves are designed for external supply of compressed air, however the common supply is possible, but in this case, please contact our technical dept.

This valve series contains rubber gaskets.

Series	G1"	G1 1/2"
Ports	G1"	G1 1/2"
Connection of external pressure supply port	G1/4"	
Connection of pilot (12,14) for pneumatic actuating	G1/8"	
Flow capacity [Nl/min]	16 000	28 000
Working pressure [MPa]	0 to 1,0 MPa when external pilot supply is used	
Pilot pressure range [MPa]	0,2 to 0,7	
Power input [W, VA]	2,5W for DC voltage, 6/4,9VA for AC voltage (inrush/hold)	
Response time for DC voltage [ms]	60	70
Response time for AC voltage [ms]	60	70
Temperature range [°C]	medium temperature max. 50, ambient temperature -20 to +50

Notes for connecting of valve

Valves are designed for independent, external air pilot supply (port X). It is not recommended, to merge air supply for main valve and for pilot valve, because a big flow through main valve may cause serious dropping of pressure for pilot valve and malfunction may occur.

The valve series, which replaces valves series K. The basic usable features are kept and brings some improvements such as lower wattage, comparable or bigger flow capacity and better accessibility. Valves are solenoid pilot actuated. The product range covers functions 3/2 normally closed, opened and double solenoid. Connector and coil are included in delivery.

This valve series contains rubber gaskets.

C300	series MVSC 300, thread G3/8"
C460	series MVSC 460, thread G1/2"

Number of positions	
2 to 10	for 2 to 10 valves

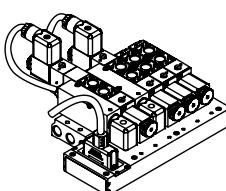

It is possible to mount series MVSC valves on manifold with predefined number of position. It isn't possible to add another position to created assembly - it could be necessary to replace manifold or create another manifold. If there is possibility that more valves will be needed in future, we recommend to use manifold with more positions and use blocking plates for unused positions. Valves are mounted to manifold directly - no adaptor is necessary. Valves mounted on manifold could be unmounted separately by unscrew of 2 bolts, which are accessible from top side (side with ports 2 and 4 of valves). Each separate coil must be wired with separate electrical cable.

Order codes for blank station plates:

Series	Order codes
220	PMVSC 220 -3P
300	PMVSC 300 -3P
460	PVMSC 460 -3P

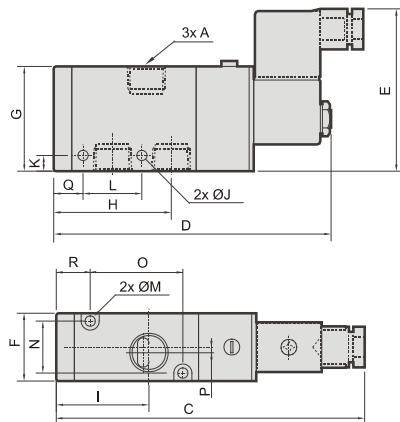

Manifolds with internal wiring and common 25-pin SUB-D connector are also available. These manifolds are for valves series 220 and 300. Number of stations is 3 to 12 as standard, maximum is 20. Voltage of coils is 24V DC. For more information about these manifolds, please contact our technical department.

220 series MVDC 220, thread G1/8"	2E1 2/2 normally closed	D12 12 V DC ± 10%
	3E1 3/2 normally closed	D24 24 V DC ± 10%
		A220 230 V AC ± 10%, 50-60 Hz
		A24 24 V AC ± 10%, 50-60 Hz

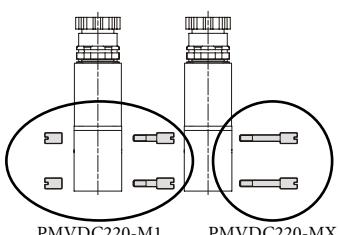

Supply contain connector(s).

Order codes of manifold screw sets

PMVDC 220 - M 1

Screw set	
1	for first valve
X	for next valve in manifold

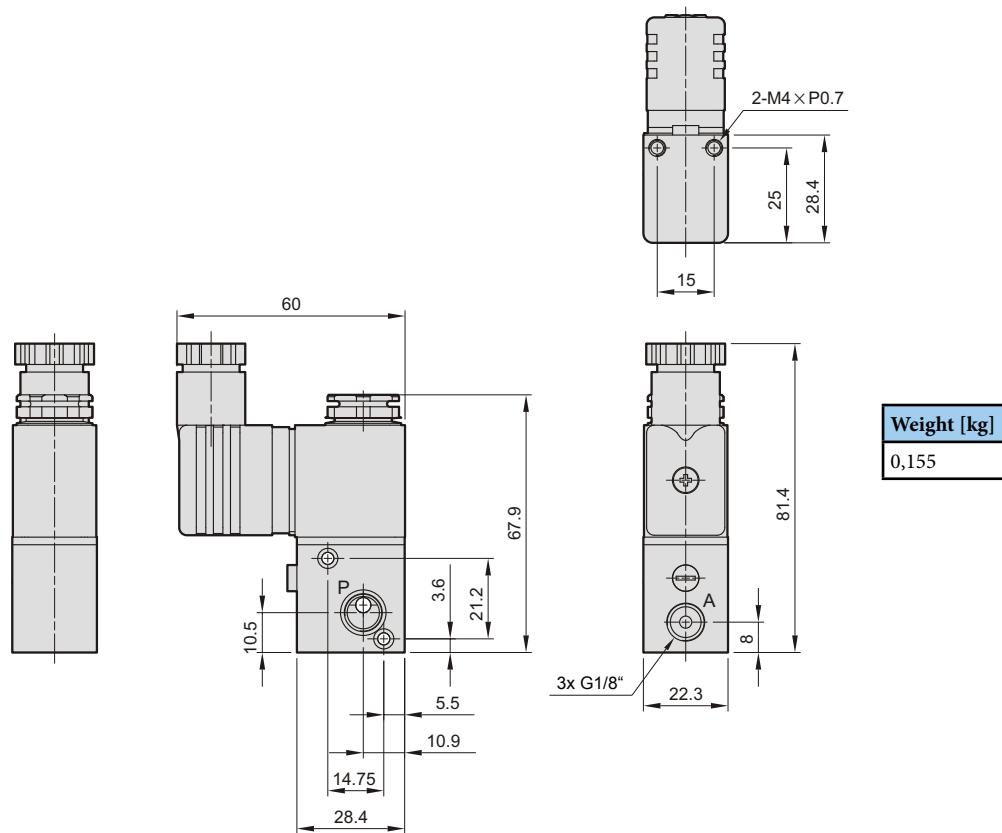

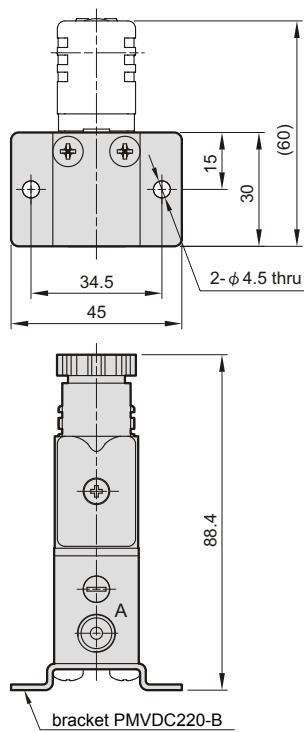

The screw sets are necessary for assembly the manifold of the valves. There are two sets available - set for first valve, which contains 2 nuts and 2 short screws and set for next valve, which contains 2 long screws - the required number of sets for next valves is about one set less than the total number of valves in the assembly (for example for 4 valves in manifold, 1 set of PMVDC220-M1 and 3 sets of PMVDC220-MX are required).

Order code of bracket

PMVDC 220 - B

Bracket type	
B	bottom bracket

Bracket is attached to the bottom of the valve and holes for fixing of the assembly of bracket and valve are accessible from the upper side (they are next to the valve). Bracket can be used for standalone valves as well as for manifolds (for first and the last valve in manifold).

High flow valve series <i>G1", G1 1/2"</i>	6-16

The new valve series, which replaces the old valve series for panel mounting with replaceable actuators. basic usable features are kept and brings some improvements such as bigger flow capacity, better accessibility and not least also better comfort during mounting and changing of actuators. Bigger actuators also brings the better user comfort during the actuating. The valves can be mounted into the panel with hole dia. 25 mm, or by using holes on the valve body. The big variability allows also changing of actuator anytime during operation - just turn off/on 2 screws on the side of valve and actuator is unlocked/locked.

This valve series contains rubber gaskets.

Lever valves are actuated by 120° lever turning. Both positions are detent. Draw bar valves are actuated by pressing the draw bar. Return to starting position is by pulling of draw bar. If the draw bar is during pulling out rotated to right, the force which is need for overcome the detent will be lower. Draw bar valves can be produced from stainless steel on request.

This valve series contains rubber gaskets.

This valve is used to pilot high-flow directional control valves connected to machines which have a high risk of injuries to the hands. The machine operator must simultaneously operate, in a safe area, two three-way manual valves for correct operation. The safety valve will ignore a single depression of one of the manual valves. To repeat the cycle both pilot signals must be exhausted and the manual valves simultaneously actuated again.

The two-hand safety valve is sold with CE -certification (compliant to Machinery Directives EEC 89/392, 91/368, 93/44, 96/68 and to Norm EN 574, level 1).

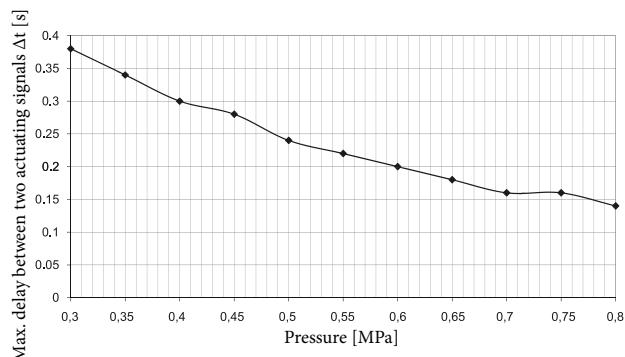

This valve series contains rubber gaskets.

Connection

MANUALLY ACTUATED TWO HAND SAFETY VALVES

This safety valve is used in applications, where controlling by two hands at a time is necessary due to safety reasons (presses and etc.). Valve is actuated only when both levers are pressed together. If one lever will be pressed permanently, valve will not be actuated when the second lever will be pressed.

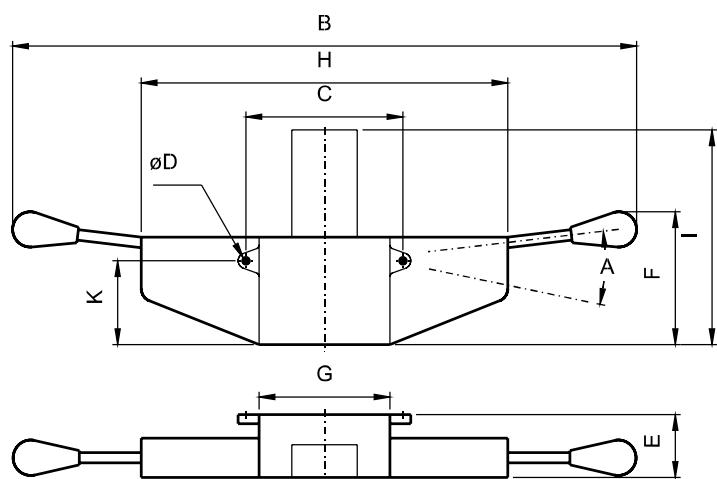

This valve series contains rubber gaskets.

Ports	G1/4"
Flow capacity [Nl/min]	800
Working pressure [MPa]	0,2 to 1,0
The way of actuation	direct
Temperature range [°C]	-20 to +80

Recommended actuations

*) Values before brackets are valid for NO version, values in brackets are valid for NC version.

Valves are actuated by rolling the cam from the one or another side of the valve body. The cam must go over the roller and release it. During the cam return, the roller will not activate the valve. Those valves are used in pneumatic controlled circuits and everywhere where only one signal about movement is necessary. There are 3/2 normally closed and open and 5/2 valves available.

This valve series contains rubber gaskets.

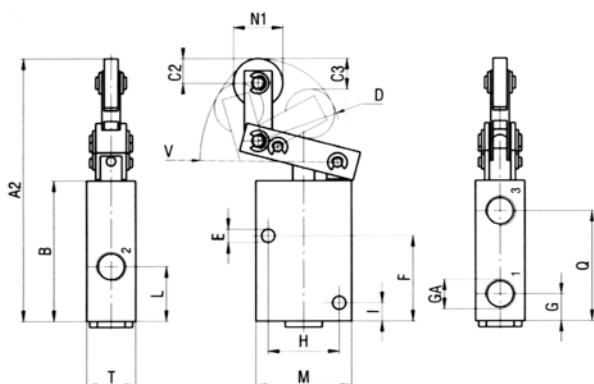

Ports	G1/8“	G1/4“

High flow valve series with flow capacity up to 28 000 Nl/min is suitable for fast air supply of big appliances, or higher quantity of appliances which are supplied from common distribution. Valves are pilot operated, using smaller, standard pneumatic actuated valves ISO 5599/1. These pilot valves are designed for external supply of compressed air, however the common supply is possible, but in this case, please contact our technical dept.

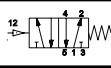

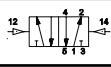

This valve series contains rubber gaskets.

Series	G1“	G1 ½“
Ports	G1“	G1 ½“
Connection of external pressure supply port	G1/4“	
Connection of pilot (12,14) for pneumatic actuating	G1/8“	
Flow capacity [Nl/min]	16 000	28 000
Working pressure [MPa]	0 to 1,0 MPa when external pilot supply is used	
Pilot pressure range [MPa]	0,2 to 0,7	
Temperature range [°C]	medium temperature max. 50, ambient temperature -20 to +50

Notes for connecting of valve

Valves are designed for independent, external air pilot supply (port X). It is not recommended, to merge air supply for main valve and for pilot valve, because a big flow through main valve may cause serious dropping of pressure for pilot valve and malfunction may occur.

Working pressure [MPa]	0,3	0,4	0,5	0,6	0,7	0,8	0,9	1,0
Switching pressure [MPa]	0,03	0,05	0,065	0,09	0,10	0,12	0,14	0,16

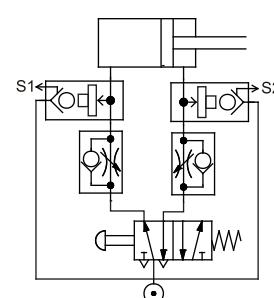

Threshold sensor can detect a pressure drop and signal it with a command signal (s). This component turns out to be especially useful when assembled directly on the cylinder. When the piston completes its stroke (no more counter pressure available in the cylinder), a command signal is given out to a direction valve to have the piston change the stroke. Sole condition required for perfect component performance is that the piston has to complete its stroke. No intermediate positions are allowed. Major advantage of this component is to command the piston stroke changes without electrical connections.

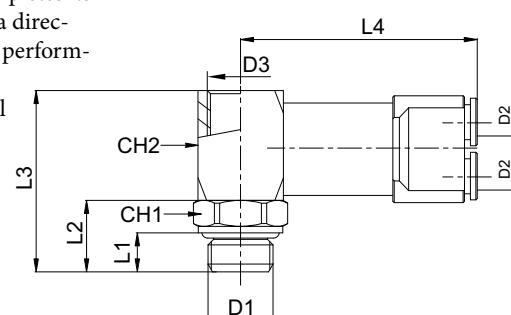

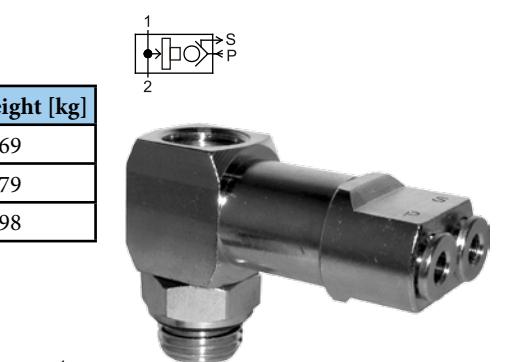

Cylinder is retracted, signal S1 is active, S2 is inactive.

Cylinder is thrusting, both signals S1 and S2 are inactive.

Cylinder is thrust, signal S1 is inactive, S2 is active.

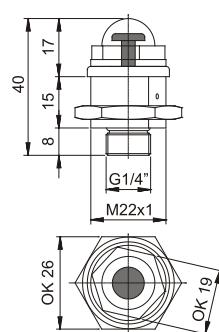

Working pressure	0,3 to 1,0 MPa
Temperature range	0°C to +70°C
Working medium	modified compressed air

Pressure indicator

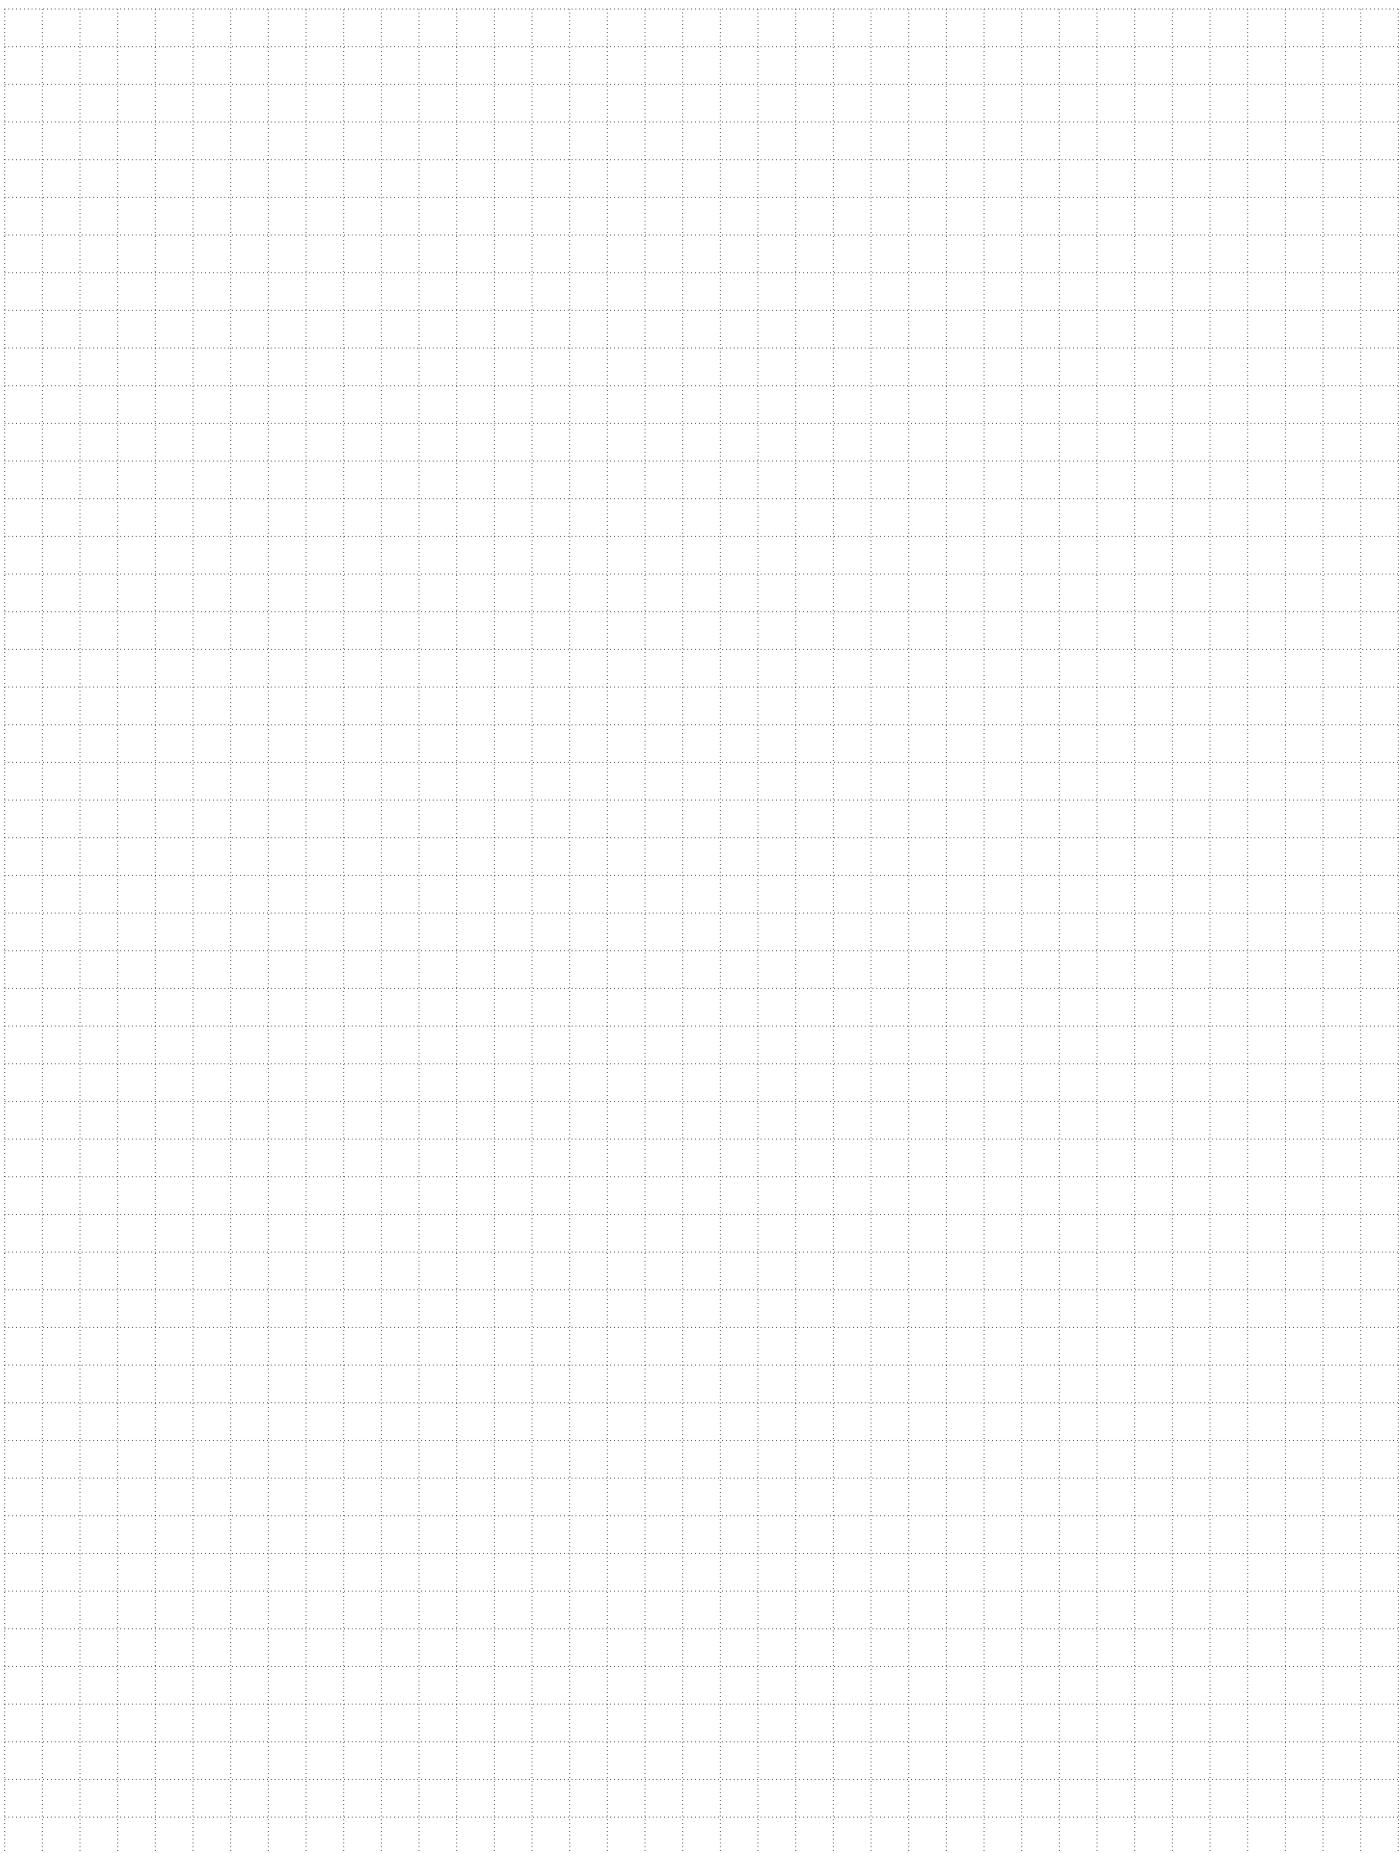

Order codes	Colour	Thread	Weight [kg]
2899 0020 3060 0003	red	G1/4"	0,053
2899 0020 3060 0004	yellow	G1/4"	0,053
2899 0020 3060 0005	green	G1/4"	0,053
2899 0020 3060 0006	blue	G1/4"	0,053

Pressure indicator is used for visual display, if there is a pressure in the circuit. Indicator doesn't show the value of a pressure, but only if there is or isn't pressure. In case, that there is a pressure, the colour disk is visible in the dome, with visibility of 180°.

Working pressure	0,2 to 1,0 MPa
Temperature range	0°C to +60°C
Working medium	modified compressed air

Dimensions are valid for semiautomatic drain type.

The coalescing filter is utilized when either clean air is required or longer component life is desired. This type of filter removes water and oil aerosols. It works differently than the particulate filter; dirty air enters the element from the centre and passes through a field of glass fibres which cause the aerosols to form into droplets which are heavier than the surrounding air. The droplets grow larger as they pass through the element and gravity causes the oil drops to drain to the sump of the bowl. By removing the harmful oil varnishes and contaminant that attack seals and gaskets, the valve or cylinder is much less likely to stick. To maximize the life of a coalescing filter it should always be used after a 5 micron particulate filter.

Series 401 has got metal bowl with sight glass.

Shutoff valve is an easy and inexpensive way to add shutoff capability to an FRL unit. The valve includes a lockout feature designed for a padlock (padlock is not included in delivery) to prevent unauthorised downstream pressurization during maintenance. The shutoff valve is usually mounted first in the assembly of air preparation units. Valve can be used standalone or assembled with other air preparation units (the same series) using connection plates (ordered separately).

Valve can be used standalone, or should be attached using connection plate (order code PMACP300-C8, PMACP300-C10 or PMACP401-C) with other units of series 300 or 401.

Dimensions

MVHT300

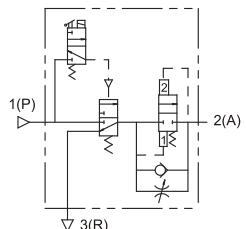

MVHT401

Soft start-up valve is used everywhere, where items in line behind the valve should be secured against intense pressure rise after connection to air supply, as is common when hand valve or quick connect couplings are used. When the valve is energized or manually operated, output pressure will increase gradually with flow rate, which can be adjusted. After specific pressure (see chart) is reached, full pressure and flow is switched to output. When the valve is de-energized or switched off manually, input is closed and air from the line will be quickly exhausted.

Description	Order codes
Digital pressure gauge MP23, G1/8", cable 2m	PMP23P-F3
Digital pressure gauge MP23, G1/8", 4-pin connector M8x1	PMP23P-F3-QD
Bracket BT-1	PMP25-BT1
Bracket BT-2	PMP25-BT2
Panel mounting adapter with protective cover PA	PMP25-PA

Description	Value
Working medium	air, non-corrosive gases, incombustible gases
Supply voltage [V]	12 to 24, DC ($\pm 10\%$)
Display	3 1/2 digits, red LED, sampling rate 5x per second
Accuracy at 25 °C	$\leq \pm 2\%$ of full span, ± 1 digit
Protection	short circuit-integrated, enclosure IP40
Ambient temp. range [°C]	0 to +50 (no dew condensation or icing)

Description	Value
Rated pressure range [MPa]	-0,1 to 1,0
Max. pressure [MPa]	1,5
Current consumption [mA]	up to 55
Selectable units	MPa, bar, PSI, kgf/cm ²
Ambient humidity [%]	35 to 85
Weight [kg]	0,102

Note:

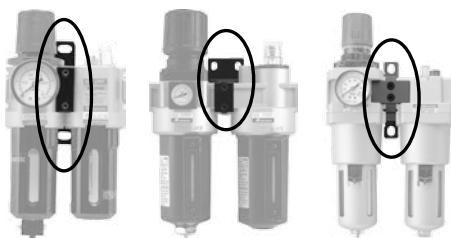

- See page 3-8 for cables with connector.
- See page 8-17 for dimensions of bracket and panel adapter (they are the same as for pressure switch MP25).
- Gauge has 2 inlet ports, bottom and back, plug is attached.

Connection plate for FRL units

Order codes	For series
PMACP300-C8	MA*300
PMACP300-C10	MA*300

Order codes	For series
PMACP401-C	MA*401
PMACP500-C	MA*500

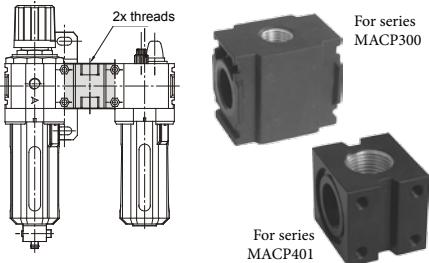

Connection plate is used, for assembling of two or more standalone units of the same series, for example filter and lubricator or filter and coalescing filter.

Valve with digital condensation removal timer

Valve for automatic condensation removal is used for draining of pressure tank or big filters. Main advantages are standard voltages 24 V DC and 230 V AC, enclosure IP65, compact design a digital timer with easy operation.

Order codes

Installation, setting

- When mounting, always use the wrench on the metallic area near the pressure port. Never apply a wrench to the plasticbody, it will damage the sensor.
- Use the pressure setting trimmer to set „ON“ pressure. Rotate clockwise to increase pressure setpoint. Rotate counter-clockwise to decrease pressure setpoint.

Digital pressure switch, type MP25 with internal thread G1/8"

Description	Value
Rated pressure range [MPa]	0.00 to 1,00
Max. pressure [MPa]	1,5
Working medium	air, non-corrosive gases, incombustible gases
Supply voltage [V]	12 to 24, DC ($\pm 10\%$)
Current consumption [mA]	up to 55
Comparative output	2x PNP output, current max. 80 mA, voltage max. 24V DC, residual voltage 1V (load current 80mA)
Comparative output indication	green LED for output 1, red LED for output 2
Analog output	output voltage 1 to 5 V, $\leq \pm 2,5\%$ F.S., linearity $\pm 1\%$ F.S., output impedance approx. 1 k Ω
Selectable units	MPa, bar, PSI, kgf/cm ²
Hysteresis	1 digit (2 digits when using PSI units), repeatability $\pm 0,2\%$ F.S. ± 1 digit
Time response [ms]	less than 2,5
Short circuit protection	integrated
Display	3 1/2 digits, red LED, sampling rate 5x per second
Enclosure	IP65
Ambient temperature range [°C]	0 to +50 (no dew condensation or icing)
Ambient humidity [%]	35 to 85
Weight [kg]	0,105

Pneumatic oil

This oil is used for lubrication of compressed air in pneumatic systems for fail-safe operation. It is specially blended oil with good features such as foamless, no aggression to sealing, balanced viscosity gives you an advantage. Oil is atomized into the compressed air in lubricators.

Temperature range: -20°C to +80°C

Order codes	Package volume
2995 0101 0000 0000	1 liter
2995 0102 0000 0000	2 liters
2995 0103 0000 0000	3 liters
2995 0105 0000 0000	5 liters
2995 0110 0000 0000	10 liters

Grease SAP-FML2A for pneumatic components

This grease is used for renovation or creation of permanent fat filling with very long lifetime for using with non-lubricated air. All pneumatic items are greased with this grease by default. Grease has very good water resistance, good stability, excellent mechanical stability and is oxidation resistant.

Temperature range: -30°C to +120°C

Order codes	Package content
2995 1004 0000 0000	400 g

Grease for pneumatic components for high temperature usage

This grease is used for renovation or creation of permanent fat filling with very long lifetime for using in high temperatures up to 200°C.

Temperature range: -40°C to +200°C

Order codes	Package content
2995 1104 0000 0000	400 g
2995 1110 0000 0000	1000 g

Grease with PTFE-Teflon for guides

It is plastic grease filled with PTFE-Teflon, which is used for greasing of various sliding and guiding surfaces on stressed places of machines. This grease is not used for greasing of internal parts of pneumatic items. For lubricating of internal parts of pneumatic components please use pneumatic oil or grease for pneumatic components.

Temperature range: -30°C to +140°C

Order codes	Package content
2995 5004 0000 0000	400 g

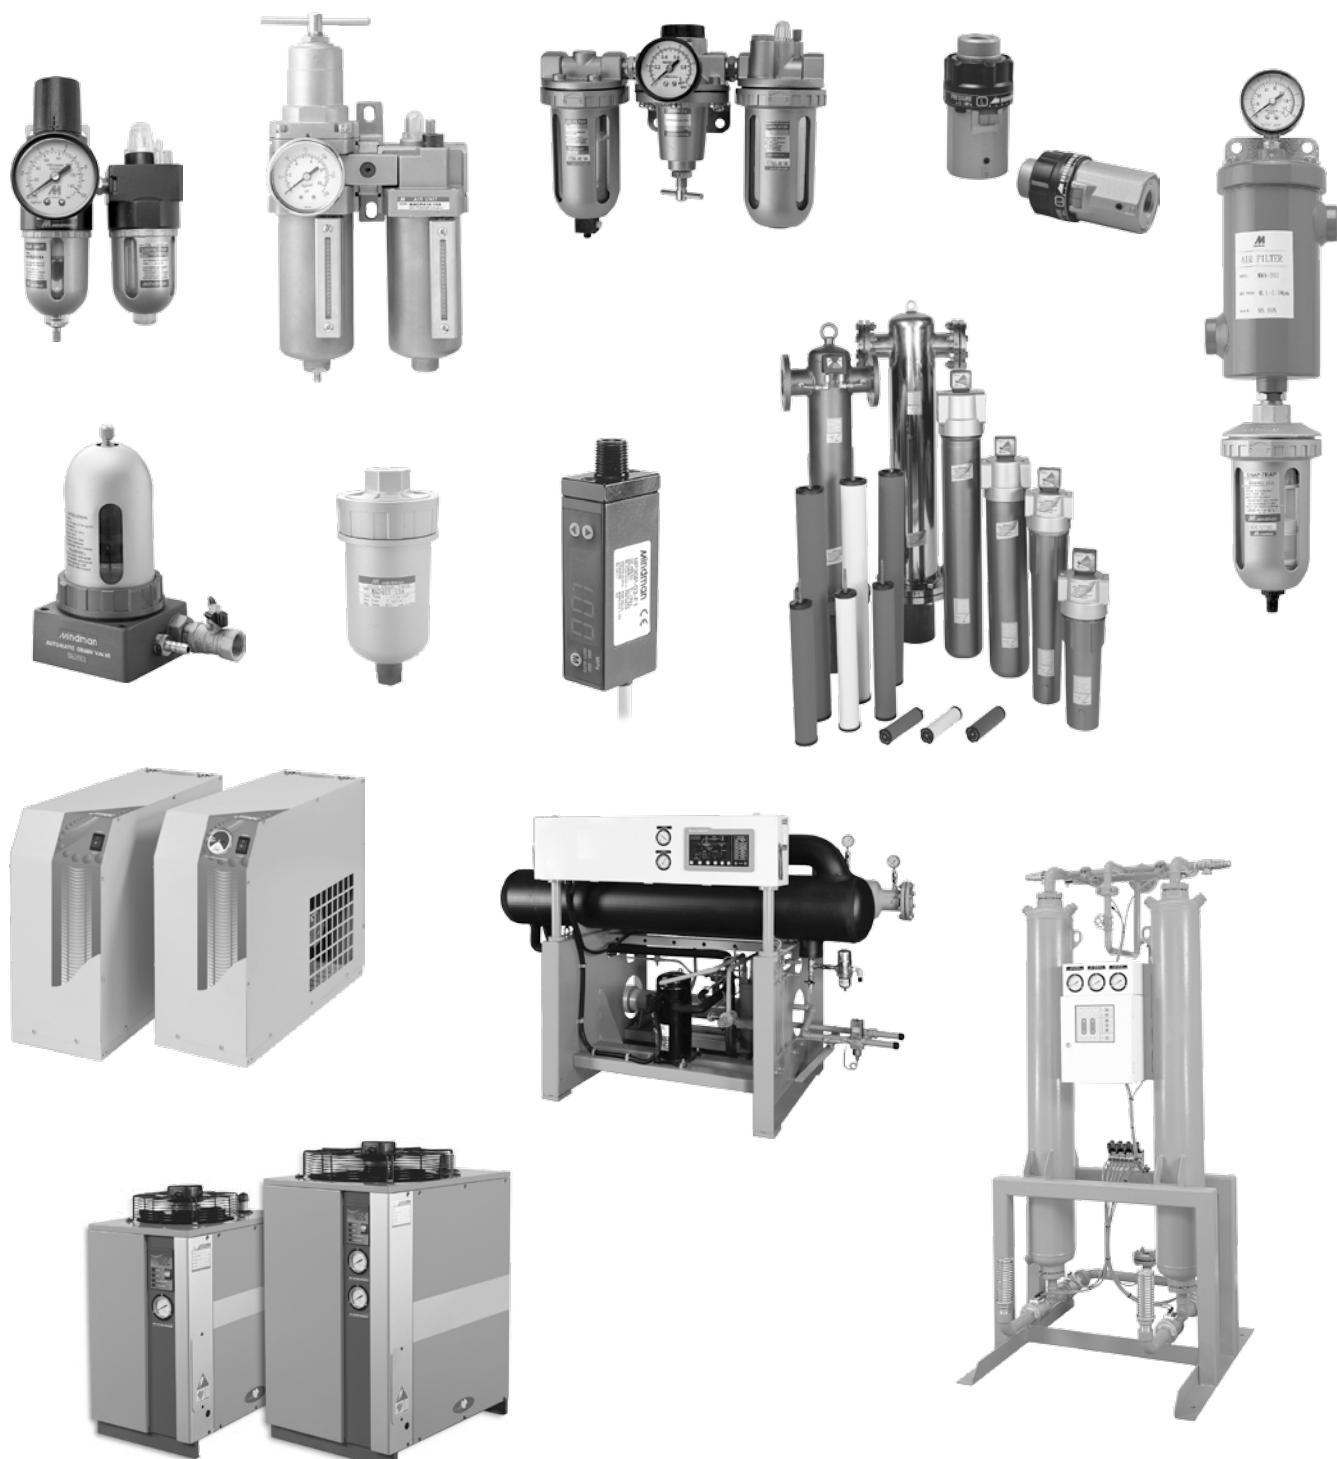

OTHER COMPONENTS FOR AIR PREPARATION

We can offer more units for air preparation, than this catalogue contain. There are units which aren't used so often or units for special purposes. For example:

- stainless steel units
- pilot operated regulators G1/4“ to G2 1/2“
- precision regulators
- precision regulators with high flow capacity
- pilot operated regulators
- electropneumatic proportional regulators
- full range of coalescing filters to get cleanliness up to 99,99% and to remove moisture
- air dryers

Please ask our technical dept. for details of for catalogues.

Order codes

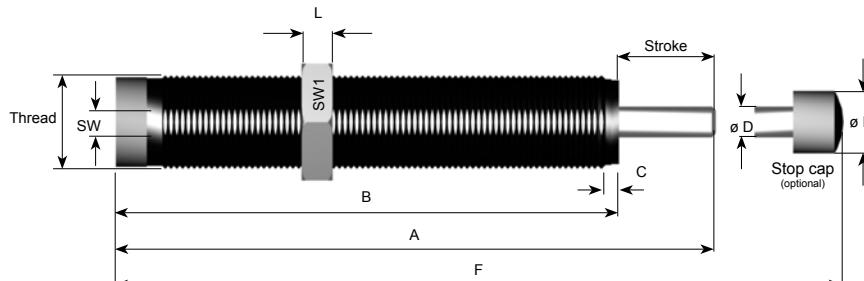

Order code consist of **series description**, **type** (1. part - see table) and **hardness selection** (2. part - see table), eventually indication of shock absorber with stop cap. If you need the shock absorber with stop cap, add „-A“ after complete order code. The stop cap couldn't be mounted additionally as accessories, because by mounting of stop cap the stroke of shock absorber will be smaller. That is why the stop cap must be ordered together with shock absorber to ensure that piston rod will be extended for stop cap.

Example 1: self-compensating progressive shock absorber M62x2 type 2,0x2 with hardness 3 has order code NC-P2,0x2-3

Example 2: adjustable shock absorber M62x2 type 2,0x1 with stop cap has order code NC-E2,0x1-1-A

Hydraulic speed control is suitable for applications, where constant speed of feed is necessary, e.g. for feed during drilling, where feed speed balances due to variable material resistance when pneumatic cylinder is used only. The advantage is continual speed setting and maintenance-free operation.

Series	NU-V
Speed range [m/min]	0,015 to 15 or 12 to 40, continual speed setting
Temperature range [°C]	-20 to +80

Order codes

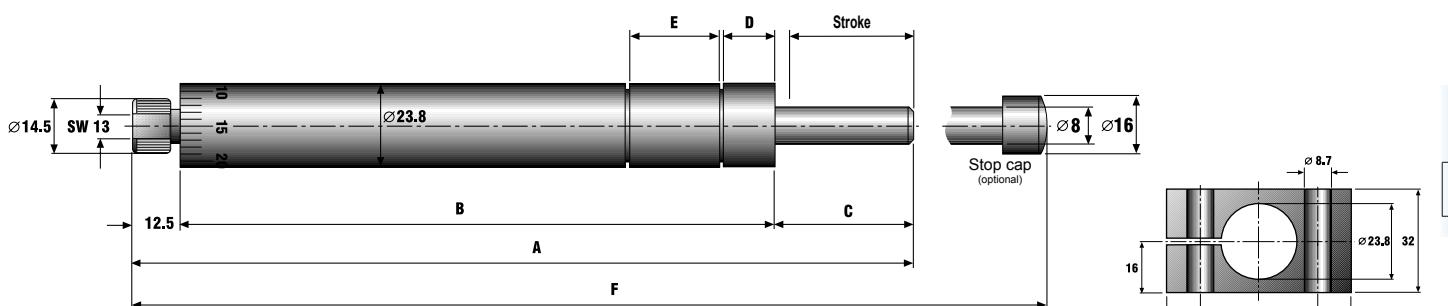

Order code consist of **series description**, **type** (1. part - see table) and **speed range** (2. part - see table), eventually indication of speed control with stop cap. If you need the speed control with stop cap, add „-A“ after complete order code. The stop cap couldn't be mounted additionally as accessories, because by mounting of stop cap the stroke of speed control will be smaller. That is why the stop cap must be ordered together with speed control to ensure that piston rod will be extended for stop cap.

Example: speed control for speed range 0,015 to 15 with stroke 100 mm has order code NU-V50-2

12	10	144	1,3 MPa	3010 1012 1000 0010

Standard tube colour is blue.

Temperature range: -20°C to +90°C

Max. pressure for higher temperatures is percentually related to 20°C.

-20 °C	0 °C	20 °C	40 °C	60 °C	80 °C	90 °C
180%	140%	100%	70%	50%	45%	38%

We recommend to use straight push-on fittings with tube guard for use with spiral tube.

The length of spiral tubes is in extended status. Working length is at least 1/2 of length (we recommend 0,3 to 0,4 multiple) in extended status. Maximal available length is 30m in extended status.

Spiral tube PU polyurethan

21	18	15/12	3080 0015 0000 0000

Protecting metal hoses are used when external effects could damage plastic tubes, for example:

- protection against welding sparks
- protection against chips during machining
- protection against wring, etc.

Material: zinc plated steel

Quick coupling type 21

- Flow capacity 844 NL/min at 0,6 MPa and $\Delta p=0,1$ MPa
- Cross section Js5 (20 mm²)
- Max. pressure 3,5 MPa

CERTIFIKAČNÍ ORGÁN CSQ-CERT
PŘI ČESKÉ SPOLEČNOSTI PRO JAKOST

akreditovaný podle ČSN EN ISO/IEC 17021:2007 Českým institutem
pro akreditaci, o.p.s. a vedený pod registračním číslem 3081

vydává

CERTIFIKÁT

shody systému managementu kvality s požadavky

ČSN EN ISO 9001:2009

společnosti

**STRÁNSKÝ A PETRŽÍK,
PNEUMATICKÉ VÁLCE, spol. s r.o.**

Bílá Třemešná čp. 388, 544 72, okr. Trutnov

IČ: 25252062

Předmět certifikace:

**Výroba pneumatických válců a příslušenství
Výroba jednoúčelových strojů a zařízení**

Registrační číslo certifikátu: 001/QMS/2012

Datum první certifikace: 01.06.2000

Platnost od: 15.10.2012

Platnost do: 14.10.2015

Vedoucí střediska certifikace systémů managementu a produktů:

Ing. Eliška Michálková

Certifikovaná společnost podléhá dozoru certifikačního orgánu CSQ-CERT.
V případě zjištění závažné neshody vůči požadavkům normy ČSN EN ISO

9001:2009 může být platnost certifikátu pozastavena nebo zrušena.
