Index R

Double acting cylinders

according to standards ISO 15552, DIN ISO 6431, VDMA 24562, CNOMO 06.07.02, DIN ISO 6432 and others

from page 1-2

- piston diameters from 8 mm to 400 mm
- adjustable cushioning in end positions
- magnetic piston, double-ended piston rod
- with brake, locking in end positions
- linear guide U or H, double piston rod
- compact cylinders, short stroke,
- rotary cylinders
- rodless, classical and magnetically driven
- temperature resistant up to +180°C
- various material versions - light metals, steel, cast iron, stainless steel
- cylinders for explosive environments according to Directive 2014/34/EU:
 - ⊗ I M2 Ex h I Mb,
 - ⊗ II -/2 G Ex h IIC T6 -/Gb,
 - ⊗ II -/2 D Ex h IIC T85°C -/Db

Swing actuators

- single-acting and double-acting
- for valves
- piston diameters from 52 mm to 400 mm

page 1-36

page 1-76

Cylinders

for special purposes and according to customer requirements

- piston diameters from 8 mm to 600 mm
- various shapes and materials

page 1-81

Shake devices

- vibrators
- knockers
- air guns

from page 2-2

Double acting cylinders with non-rotating rod

from page 1-44

- piston diameters from 12 mm to 200 mm
- magnetic piston
- hexagonal piston rod or two connected piston rods

Clamp cylinders and grippers

from page 2-14

- piston diameters from 12 mm to 125 mm
- swing-linear, linear clamps
- angular, parallel and three-point grippers

Double acting cylinders with integrated guidance

from page 1-54

- piston diameters from 6 mm to 80 mm
- magnetic piston
- double-ended piston rod
- integrated hydraulic shock absorbers

Cylinders

hydro-pneumatic and boosters

from page 2-21

- various designs
- wide range of amplification ratios

Single acting cylinders

from page 1-66

- piston diameters from 6 mm to 160 mm
- magnetic piston

Cylinder's accessories

from page 3-2 a 4-2

- mounting accessories
- position sensors
- dust covers

Actuators

- single-acting linear with a force of up to 65 kN
- double-acting linear with a force of up to 240 kN
- rotary single-acting with a torque of up to 10,000 Nm
- rotary single-acting with a torque of up to 50,000 Nm
- for pipeline dampers and valves

from page 1-82

Valves

electromagnetically operated

- wide range of valves
- with spool&sleeve assembly or with classic sealing elements
- individual and group mounting
- various types of electronic control including BUS systems

from page 5-3

Valves

mechanically and pneumatically operated

- manual, foot, mechanical and pneumatic control
- interchangeable actuators
- panel mountable

from page 6-2

Valves

- flow-control, one-way valves
- quick exhaust valves
- logical gates
- slide and ball shut-off valves
- indicators and other valves with specific function

from page 7-2

Compressed air treatment elements

from page 8-2

- modular system
- many types of elements with specific functions
- standard and heavy-duty versions
- stainless steel elements

Hydraulic shock absorbers and seed control

from page 9-3

- adjustable and self-compensating shock absorbers
- adjustable brakes

Accessories

from page 10-2

- push-in and push-on fittings
- fittings accessories (reducers, sockets, nipples, etc.)
- tubes made of various materials
- silencers
- other elements for pneumatic circuits

Compressed air distribution

from page 10-17

- modular system
- aluminum or plastic connectors
- aluminum pipes with diameters from 16 to 110 mm

Electric drives

from page 11-2

- various designs, strokes and powers
- with or without motor and control unit

The VDMA cylinder range has been expanded with a type with a plastic endcaps

page
1-6

The CNOMO cylinder range and compact cylinders have been expanded with a diameter of 25 mm

page
1-16

A new line of DIN ISO 6432 stainless steel cylinder series MCMIS

page
1-24

Swing actuators

page
1-36

page
1-76

A new line of rodless cylinders, the OSP-P series

page
1-38

A new line of telescopic cylinders

page
1-42

A new cylinder series with non-rotating piston rod

from page
1-44

A new single acting cylinder series MCMJP

page
1-74

The air guns have been expanded with a type of 50l.

page
2-10

Swing linear clamps

page
2-14

and power clamps

page
2-17

MCKC clamp series has been expanded by a diameter of 50 mm

from page
2-16

New BS multiplier series and MVBA series expanded by new types

from page
2-23

Electromagnetic valves with spool&sleeve assembly series K NAMUR

page
5-6

Electromagnetic valves with spool&sleeve assembly series KI ISO 5599/1 KOMPAKT size 1 and 2

page
5-16

LV7 stem and roller lever valves

page
6-14

page
6-17

Pneumatically operated valves series K and MVAA expanded by size G1/2"

from page
6-18

Pneumatically operated reversing valve

page
6-24

MAIR precision pressure reducing valve series expanded by type MAIR300

page
8-5

Fine filters series MAF302, MAF501 and MJF

from page
8-14

Electronic pressure reducing valves expanded by series MAER300

page
8-20

Antistatic hoses

page
10-13

Electrical linear actuators with ball screw series 1E1, ISO15552

page
11-2

There is no question, that the internet is an important communication tool nowadays. To make your access to our latest information easier, you can always find our up to date catalogue and many other informations at the address

<https://www.sappv.cz>

On this address, you can find our complete offer not only of pneumatic components, but also other spheres which we deal with - machine tools, food-processing industry and single-purpose machines and equipment.

In the section, the pneumatic components, you can easily use our ordering system. Each component can be put into the basket directly from the catalogue, which significantly simplifies your job and makes it easier.

Connect with us also on our social networks:

3D models for your CAD system

... may be simply generated any time at our web site!

1. choose the product from our internet catalogue:

2. enter 3D model parameters and e-mail address:

3. after receiving the email, save the enclosed model

4. import model into your CAD system

For more information about generating 3D models, please visit our website at <https://www.sappv.cz/r/ei1>

If you are designing pneumatic, electric, or hydraulic schematic layouts or their combination, you will surely appreciate our new software in our offer. It is software **AUTOMSİM PREMIUM** designed by Irai France for creation and simulation of schematic layouts.

ORDER CODES

standard license ... 2899 0099 9000 0001

license package for schools, universities and professional educational institutions, accredited by Czech Ministry of Education (contains 10+1 licenses) ... 2899 0099 9000 0002

Examples of schematic layouts

Using the symbol library, you can simply insert the right symbol, which is necessary in your layout. If there is no specific symbol in the library, it can be easily modified from similar symbol by changing the properties. Pneumatic cylinders can be linked to proximity switches or roller lever valves, proximity switches to relays, relays to valve coils, etc. So it isn't just drawing of layouts, but a circuit, which you can simply build and simulate it during operation and check, if the function conforms the submission. Of course, the pressure level as well as percentage of adjustment of the speed control and many other properties can be set and changed during simulation. It is also possible to display graph with various values.

You can also create the layout of your current circuit, which you are having problems with and check, where the critical points are. Layouts can be printed and exported into EMF file format, which is a standard format that can be imported into any office software. If you fill in fields like designation, supplier, description and other during inserting the symbols into the layout, the automatic creating of bill of material is available.

Example of graph

Comprehensive symbol library

Features of inserted symbol

AUTOMSİM PREMIUM is excellent for creating layouts and their functional simulations not only for its simplicity, but also for its price!
The full functional demo is available. Please contact us about the possibility of delivery.

General conditions for pneumatic circuits

- it is necessary to follow the appropriate safety rules, instructions, recommendations and specified parameters (temperature, pressure etc.), when setting products into operation
- areas, which are pressurized even after closing of the main air supply, should be specially marked in the pneumatic circuits
- it is necessary to take into account the failure of the product, or emergence of dangerous situations due to wrong operation, age or failure
- we recommend to mark with a special sign the whole pneumatic circuits, where the high caution during service is necessary
- we do not recommend to weld by electric arc on machinery, where pneumatic cylinders are mounted
- end users must take sufficient preventive steps to prevent injuries on material and health of employees

Conditions of use and operation of pneumatic cylinders

- disassembly of single-acting cylinders must be done very cautiously, because the inside spring is mounted with a preload
- working medium is modified compressed air
- we recommend to use our pneumatic oil for air lubrication, or some oil listed on the recommended oil list, to renew lifetime grease, use grease SAP-FML2A (order code 2995 1004 0000 0000)
- using other than recommended oils leads to the damage of O-rings and sealing built-in not only into cylinders, but also in other components used in the pneumatic circuit
- if the speed of piston rod extension is lower than 1 ms^{-1} , the compressed air needn't be lubricated; if the speed is higher, we recommend to lubricate air using a lubricator and pneumatic oil (see above); we also recommend to lubricate air, when the dew point of compressed air is lower than -20°C
- we offer special surface treatment, material change (stainless steel) or use of dust covers on our cylinders for environments with hard conditions and aggressive surroundings
- other special designs, material or sealing changes, etc. are possible after consultation with our technical dept.
- it is necessary to follow the correct mounting of cylinders and correct guiding of the piston rod to avoid radial forces (except for versions which are specifically designed to capture radial forces such as guide unit H)
- we recommend to use hydraulic shock absorbers, when heavy mass and high piston rod speed may occur - the machinery lifetime will be significantly extended

Stroke tolerance of pneumatic cylinders

Stroke of a cylinder may have positive tolerance accordingly to DIN ISO 6431, DIN ISO 6432 and VDMA 24562. The amount of tolerance is given by manufacturing tolerances and it depends on diameter and stroke as follows:

Standard	Piston diameter [mm]	Stroke [mm]	Allowable tolerance [mm]
DIN ISO 6432	8, 10, 12, 16, 20, 25	0 to 500	+1.5
DIN ISO 6431 VDMA 24562 NF E 49003.1	32, 40, 50	0 to 500	+2.0
		501 to 1250*	+3.2**
	63, 80, 100	0 to 500	+2.5
		501 to 1250*	+4.0**
	125, 160, 200, 250, 320	0 to 500	+4.0
		501 to 1250*	+5.0**

*) For strokes bigger than 1250 mm, the tolerance depends on an agreement between the producer and the customer

**) This value is not listed in standard VDMA 24562, or NF E 49003.1 and it is valid only for standard DIN ISO 6431

For large strokes, it is necessary to check, that the piston rod will not fail

Critical strength of piston rod (buckling length)

by buckling, even if the cylinder would withstand the load according to its diameter. Quick check can be done by reading the graph below:

For exact calculation of the critical force, use the following formula (F_k must be higher than load to prevent piston rod damage):

Where: F_k is critical force on piston rod [N]

$$F_k = \frac{\pi^2 \times E \times J}{l^2 \times k}$$

E is stress modulus $2.1 \times 10^5 \text{ MPa}$

J is quadratic moment of cross section $[\text{mm}^4]$

l is critical length (=twice the stroke) [mm]

k is safety coefficient (in practice about 4)

Conditions of use and operation of pneumatic valves

- it is necessary to keep in mind, that the valve spool can be in an undefined position before first activation and that uncontrolled movements can occur
- when 5/3 valves or non-return valves are used, it is necessary to keep in mind that some parts of the circuit can always be pressurized - high caution during service is necessary
- it is necessary to follow listed technical data, especially pressure, air purity and solenoids voltage
- exhaust ports on valves should be equipped with silencers to prevent intrusion of junk into the valve
- valves can work on either lubricated or non-lubricated air (for more information, see chapter Modified compressed air)

Short form port designations:

Port	Designation to ISO 5599	Designation to DIN*	Designation to ANSI*
Supply port	1	P	P
Working line	2	A	B
Exhaust line	3	R	EB
Working line	4	B	A
Exhaust line	5	S	EA
Pilot line	12	Z	CA
Pilot line	14	Y	CB

*) Designation by letters shouldn't be used anymore.

Protecting contacts when electromagnetic coils are used

Electromagnetic coil is a coil, which opposes any voltage change. It is thus possible, that a voltage spike or electrical ark will occur when voltage is switched on or off. This can then lead to damage to the isolation or to contacts burning. There are at least four ways to eliminate this danger:

- for serial connection of RC circuit, it is necessary to calculate values of resistance and capacity for each application separately
- for DC voltage, a diode can be used, it is necessary to calculate the value of the diode for each application
- Zener diode can be used for both AC and DC voltage, it is necessary to calculate the size of the diode for each application
- varistor can be used for AC and DC voltage and it is commonly built into a connector of a valve (see connectors for valves)

Distribution of compressed air

The operational reliability and service life of a pneumatic system depend, to a large extent, on the preparation of compressed air. Impurities in the compressed air such as scale, rust and dust as well as the liquid constituents in the air, which deposit as condensate can cause a great deal of damage in pneumatic systems. These contaminants accelerate wear on sliding surfaces and sealing elements, adversely affecting the functionality and service life of the pneumatic components. Pressure fluctuations occur as a result of switching the compressor on and off, these have an unfavourable effect on the functioning of the system. In order to eliminate these effects, compressed air service units must be installed in every pneumatic system.

Example of air distribution:

Compressed air goes from a compressor through a coarse filter to an a pressure vessel. Then the air is led into an air dryer and another filter, which should catch junk, collected in the pressure vessel and air dryer. The air dryer is used only in substantiated cases.

Then distribution in plastic or metal tubes follows, the tubes should be inclined by 1-2° to allow drainage of possible condensed water. Individual branches to appliances should come out of the main distribution diagonally upwards. If there are intense pressure shocks during compressed air consumption, it is useful to use another smaller pressure vessel between the main distribution and appliance. This vessel should balance the pressure shocks. Finally, the standard FRL unit or only some of its modules is connected.

Legend:

- 1) compressor
- 2) coarse filter
- 3) pressure vessel
- 4) condensate drain
- 5) air dryer
- 6) filter
- 7) shut off valve
- 8) standard FRL unit

Modified compressed air

Modified compressed air = filtered air without solid particles and liquids, optionally lubricated.

All our produced pneumatic items are greased with special grease, so it isn't necessary to lubricate air under standard conditions. However, we recommend to regularly check the lifetime grease level and if you observe a decline, renew the grease filling. Careful, these items cannot be exposed to air polluted by water or oil, because the lifetime grease level would be flushed out. If that happens, the air has to be lubricated, or the lifetime grease filling must be renewed. Special grease for lifetime filling is available, please see chapter Air preparation or contact our sales dept. If the pneumatic circuit is stressed and heavy duty, we recommend to lubricate air to increase the lifetime of the pneumatic items.

The operational reliability and service life of pneumatic systems depend among others on the quality of incoming compressed air. Junk and moisture contained in the air increase surface wear of parts and sealing, which decreases economy and lifetime of the pneumatic items. Air preparation thus consists of liquid removal (mainly water and oil), suitably dimensioned filtration of solid junk and appropriate air lubrication.

Air must be so clean after the modification as to not cause any damage to the pneumatic system and sequentially damage to machinery. Using a filter reduces the maximum flow capacity since it builds up resistance that obscures air flow. Filter should have a filter element, that produces air of sufficient quality but keeps in mind economy of the system. If high quality of compressed air is required, the air should be filtered in several steps. If we only use a fine filter that ensures the requested air quality, we have to expect a serious decrease in its lifetime.

The compressed air quality is expressed by quality classes, that are described in ISO 8573-1 standard as well as the acceptable values of junk.

Quality classes according to ISO 8573-1

Class	Solid junk			Max. pressure dew point [°C]	Max. oil concentration [mg/m³]
	Particle size 0,1 to 0,5 [µm]	Particle size 0,5 to 1,0 [µm]	Particle size 1,0 to 5,0 [µm]		
1	≤ 20 000	≤ 400	≤ 10	-70	0.01
2	≤ 400 000	≤ 6 000	≤ 100	-40	0.1
3	unstipulated	≤ 90 000	≤ 1 000	-20	1
4	unstipulated	unstipulated	≤ 10 000	+3	5
5	unstipulated	unstipulated	≤ 100 000	+7	> 5

Recommended way of using the quality classes

Area	Solid junk		Water		Oil	
	Max. class	Max. particle size [µm]	Max. class	Max. dew point [°C]	Max. class	Max. concentration [mg/m³]
Pneumatic cylinders	5	40	4	+3	4	5
Pneumatic valves	3 to 5	5 to 40	4	+3	4	5
Fine regulators	3	5	4	+3	3	1
Measuring equipment	2	1	4	+3	3	1
Other industry	5	40	3 to 7	-20 to +10 and more	3 to 5	1 to 25

Mounting, operation and service of air preparation units

It is necessary to pay attention to the direction of flow, which is marked by arrows or labeled IN/OUT, when mounting the units. The following sequence of units should be adhered to: shut off valve, particulate filter, coalescing filter, regulator, lubricator. Bowls of the individual units must always point vertically downwards. Lubricator should be as close to the appliance as possible (max. 5 to 10 m).

Condensated water level in the bowl mustn't exceed level of bottom of filter element or mark on a bowl. For drain, there is connection for tube on the bottom of bowl. Automatic drain doesn't practically need service, but if semi-automatic drain is used, it is necessary to regularly

check level of condensed water in bowl and expel it always if level of water achieve filter element or mark on the bowl. Semi-automatic drain automatically expels water if the primary pressure drop under 0.05 MPa. If it is necessary to expel water immediately, there are 2 systems: one has got button - pressing the button the water is removed. The second system is without button - for removing the water simply push the tube connection towards to the bowl. If the filter element is polluted, it must be changed. Before disassembling shut off air supply and depressurize the filter, remove bowl (release safety lock on side of bowl or push the bowl towards to the unit, turn it off 45° and pull it out). Then unscrew the baffle and remove filter element. Procedure at assembling is the same, but in reverse order.

If lubricator is used, it is necessary to keep sufficient level of oil. Oil refilling is possible when air supply is shut off directly into bowl, or by button head fill nut. Before disassembling shut off air supply and depressurize the lubricator, remove bowl (release safety lock on side of bowl or push the bowl towards to the unit, turn it off 45° and pull it out). Fill in bowl (see level mark on the bowl) and mount bowl back. Procedure at assembling is the same, but in reverse order. It is necessary to use only recommended oils.

Some bowls are made from polycarbonate and could be cleaned only with household soap and water. Do not use any solvent (alcohol), bowls may crackle.

Recommended oils for compressed air lubricating

Primarily we recommend to use our pneumatic oil with order code 2995 0101 0000 0000, which composition was specially designed for this purpose. It is oil, which is foamless, nonaggressive to gaskets and has suitable mechanical characteristics (viscosity etc.).

In case of need, the following oils could be used too:

Supplier	Designation	Supplier	Designation
Stránský a Petržík	Pneumatic oil, order code 2995 0101 0000 0000	Fuchs	Renolin MR1, MR3
Shell	Tellus Ol 10	Optimol	Ultra 10
Mobil Oil	Velocite Oil No. 6	Agip	OSO10
BP	Energol HLP10	Elf	Spinelf 5, 10
Esso	Spinesso 10, Nutto H5, H10	Total	Azolla 10
Aral	Vitamol GF10, DE 10, Sumorol CM5, CM10	Fina	Cirkan 10

Compressed air consumption

Calculation of air consumption for pneumatic cylinder:

$$Q = Z \times (qp + qz) \times n \times 0,1$$

where

Q is air consumption [l/min]

Z is stroke [mm]

qp is air consumption for 10 mm of stroke when thrust [l]

qz is air consumption for 10 mm of stroke when retract [l]

n is number of complete strokes (thrust+retract) in a minute

Table of air consumption sp / sz [l] for 10 mm of stroke:

Piston diameter	Piston area	Working pressure [MPa]										
mm	mm ²		0.1	0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9	1.0

Corresponding compressed air flow rates [l/min] as a function of pressure:

Pressure [MPa]	Port size					
	G1/8"	G1/4"	G3/8"	G1/2"	G3/4"	G1"
	Hose size at the length app. 2 to 2.5 m					
	Js 5	Js 6	Js 8	Js 11	Js 14	Js 18
0.2	126	227	357	797	1416	2213
0.4	212	377	593	1328	2361	3689
0.6	297	529	826	1860	3306	5163
0.8	382	680	1062	2391	4250	6640
1.0	468	830	1299	2923	5194	8115

Values of flow rate are applied at standard conditions at 20°C and absolute pressure 0.1 MPa.

Action force

Calculation of force on piston rod of pneumatic cylinder:

$$F = (S_p \text{ (or } S_z) \times p) - T$$

where

F is force on piston rod of pneumatic cylinder [N]

S_p is piston area at thrust [mm²]

S_z is piston area at retract [mm²]

p is working pressure [MPa]

T is friction force (about 10% in practice)

Table of retract force on piston rod of pneumatic cylinder [N]

Piston diameter [mm]	Working pressure [MPa]											
	0.1	0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9	1	1.1	1.2

Hydraulic shock absorber selection

Five basic criteria are required for sizing the shock absorbers:

- impacting mass m (kg)
- impact speed v (m/s)
- additional external forces acting on the mass e.g. propelling force F (N)
- number of strokes of the shock absorber per hour X (1/h)
- number of parallel shock absorbers

Free falling mass

- $W_k = m \cdot g \cdot H$
- $W_A = m \cdot g \cdot S$
- $W_{kg} = W_k + W_A$
- $W_{kg/h} = W_{kg} \cdot X$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$
- $v = v_e = \sqrt{2 \cdot g \cdot H}$

Mass without propelling force

- $W_{kg} = \frac{m \cdot v^2}{2}$
- $W_{kg/h} = W_{kg} \cdot X$
- $v = v_e$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$

Mass with propelling force, horizontal

Movement downward: $W_A = (F + m \cdot g) \cdot S$
 Movement upward: $W_A = (F - m \cdot g) \cdot S$

- $v_e = \frac{v}{K1}$
- $W_k = \frac{m \cdot v_e^2}{2}$
- $W_A = F \cdot S$
- $W_{kg} = W_k + W_A$
- $W_{kg/h} = W_{kg} \cdot X$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$

Swinging mass without propelling force

- $W_k = \frac{m \cdot v^2}{2} = \frac{J \cdot \omega^2}{2}$
- $W_A = \frac{M \cdot S}{r}$
- $W_{kg} = W_k + W_A$
- $W_{kg/h} = W_{kg} \cdot X$
- $v_e = r \cdot \omega = \frac{v \cdot r}{R}$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$

Mass on driven rollers

- $W_k = \frac{m \cdot v^2}{2}$
- $W_A = m \cdot g \cdot S \cdot \mu$
- $W_{kg} = W_k + W_A$
- $W_{kg/h} = W_{kg} \cdot X$
- $v = v_e$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$

Mass on incline

- $W_k = m \cdot g \cdot H$
- $W_A = m \cdot g \cdot \sin \alpha \cdot S$
- $W_{kg} = W_k + W_A$
- $W_{kg/h} = W_{kg} \cdot X$
- $v = v_e = \sqrt{2 \cdot g \cdot H}$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$

Rotary table with propelling force

- $W_k = \frac{m \cdot v^2}{2} = \frac{J \cdot \omega^2}{2}$
- $W_A = \frac{M \cdot S}{r}$
- $W_{kg} = W_k + W_A$
- $W_{kg/h} = W_{kg} \cdot X$
- $v_e = r \cdot \omega = \frac{v \cdot r}{R}$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$

Swinging mass with propelling force

- $W_k = \frac{m \cdot v^2}{2}$
- $W_A = \frac{M \cdot S}{R1} = \frac{F \cdot r \cdot S}{R1}$
- $W_{kg} = W_k + W_A$
- $W_{kg/h} = W_{kg} \cdot X$
- $v_e = R1 \cdot \omega = \frac{v \cdot R1}{R2}$
- $m_e = \frac{2 \cdot W_{kg}}{v_e^2}$

Formulae

Effective mass

$$m_e = \frac{2 \cdot W_{kg}}{v_e^2}$$

Counter force

$$F_G = \frac{W_{kg} \cdot 1.2^*}{S}$$

Deceleration time

$$t = \frac{2 \cdot S}{v_e} \cdot 1.2^*$$

Deceleration time

$$a = \frac{v^2}{2 \cdot S} \cdot 1.2^*$$

Stroke

$$S = \frac{v^2}{2 \cdot a} \cdot 1.2^*$$

*) Calculation for optimum setting. Allow a safety margin!

Used values and variables

W_k [Nm]	kinetic energy	K_1 [1]	correction factor for pneumatic drive force ($K_1=0.65$)
W_A [Nm]	propelling force energy	M [Nm]	torque
W_{kg} [Nm]	total energy	R, r [m]	radius
$W_{kg/h}$ [Nm·h ⁻¹]	total energy per hour	H [m]	height
m [kg]	mass	g [m·s ⁻²]	acceleration due to gravity
m_e [kg]	effective mass	J [kg·m ²]	moment of inertia
v [m·s ⁻¹]	impact speed	ω [s ⁻¹]	angular velocity
v_e [m·s ⁻¹]	effective speed	μ [1]	coefficient of friction (steel=0.2)
X [h ⁻¹]	number of strokes per hour	a [°]	angle
S [m]	stroke	a [m·s ⁻²]	acceleration / deceleration
F [N]	propelling force	t [s]	deceleration time
F_p [N]	pneumatic drive force	F_G [N]	counter force

Selection of pneumatic cylinder options

Pneumatic cylinders can also be manufactured with material, shape and dimensional options from standard types. This makes it possible, for example, to simply change the piston rod material, temperature resistance, etc. For each cylinder type, the order codes indicate the most common options that can be used. However, there is a wide range of options available, which we constantly supplement according to customer requirements. Therefore, if an option is not listed for the relevant cylinder type, but you have found it in this list, please check with our technical department whether such an option can be used for a specific cylinder type. If this is not possible, it is possible to manufacture an atypical cylinder according to specific requirements.

Option	Description
3	caps and other external steel parts will be made of stainless steel 17 240, piston rod material will be 17 348
5	all metal parts (external and internal) incl. tube will be made of stainless steel 17 240, piston rod material will be 17 348 (all stainless steel version)
6	front cap will be made of galvanized gray cast iron
7	cylinder caps will be made of galvanized gray cast iron
10	piston rod sealing elements will be made of material resistant to temperatures up to 200 °C
11	all sealing elements will be made of material resistant to temperatures up to 200 °C
13	instead of profile duralumin tube, round duralumin tube will be used
14	piston rod material will be 17 240
16	external steel parts will be made of stainless steel 17 240, piston rod material will be 17 348
17	all metal parts (external and internal) incl. tube will be made of stainless steel 17 240, piston rod material will be 17 348, all sealing elements will be made of material resistant to temperatures up to 200 °C (combination of option 5 and 11)
18	all sealing elements will be made of material suitable for use with hydraulic oil
23	caps will be made of galvanized gray cast iron or steel, the tube will be round steel (design suitable for heavy environments)
24	all sealing elements will be made of material resistant to temperatures up to 200 °C, the piston rod material will be 17 240 (combination of options 11 and 14)
25	piston rod without recess behind the thread
26	piston rod material will be 17 240 and the piston rod will be without recess behind the thread
27	caps will be made of galvanized gray cast iron, the piston rod material will be 17 348 (combination of options 7 and 45)
28	piston rod sealing elements will be made of material resistant to temperatures up to 200 °C, the external steel parts will be made of stainless steel 17 240, the piston rod material will be 17 348 (combination of options 10 and 16)
29	all metal parts (external and internal) incl. tube will be made of stainless steel 17 240, the piston rod material will be 17 348, the piston rod sealing elements will be made of a material resistant to temperatures up to 200 °C (combination of options 5 and 10)
31	food-grade grease will be used
36	piston rod sealing elements will be made of material resistant to temperatures up to 200 °C, piston rod material will be 17 240 (combination of options 10 and 14)
37	instead of duralumin tube (or duralumin profile) a round composite tube will be used, piston rod sealing elements will be made of material resistant to temperatures up to 200 °C, external steel parts will be made of stainless steel 17 240, piston rod material will be 17 348
39	instead of duralumin tube (or duralumin profile) a round steel tube (sprayed with paint) will be used
40	ATEX certified, with round composite tube,  I M2 Ex h I Mb,  II -/2 G Ex h IIC T6 -/Gb,  II -/2 D Ex h IIC T85°C -/Db
41	ATEX certified, with round steel tube,  I M2 Ex h I Mb,  II -/2 G Ex h IIC T6 -/Gb,  II -/2 D Ex h IIC T85°C -/Db
42	ATEX certified,  II -/2 G Ex h IIC T6 -/Gb,  II -/2 D Ex h IIC T85°C -/Db
43	piston rod seal will be with increased resistance for dusty and abrasive environments (e.g. concrete plants, sand pits)
44	all metal parts (external and internal) will be made of stainless steel 17 240, the tube will be round composite, the piston rod material will be 17 348, the piston rod sealing elements will be made of a material resistant to temperatures up to 200 °C
45	piston rod material will be 17 348
46	external steel parts will be made of stainless steel 17 240, the piston rod material will be 17 240
47	piston rod seal will be covered (and secured) to increase resistance to mechanical damage
48	piston rod seal will be with increased resistance for dusty and abrasive environments + round tube
49	piston rod seal will be with increased resistance for dusty and abrasive environments + external steel parts will be made of stainless steel 17 240, piston rod material will be 17 240 (connection options 43+46)
50	instead of duralumin tube (or duralumin profile) a round stainless steel tube will be used
51	instead of a duralumin tube (or duralumin profile), a round composite tube will be used

Selection of options of mounting accessories of pneumatic cylinders

Clamping accessories can also be manufactured with material, shape and dimensional options from standard types. However, it is necessary to check with our technical department whether the required option can be used for a specific type of accessory. If this is not possible, it is possible to manufacture atypical accessories according to specific requirements.

Option	Description
1	accessory material will be stainless steel 17 246
2	left-hand thread
10	pin and connecting material will be stainless steel 17 240
11	design for round cylinder tube
14	external thread

Option	Description
16	the material of the accessories will be galvanized gray cast iron
17	the material of the accessories will be galvanized steel
21	the thread (or just pitch) will have a different size
22	the steel parts will be stainless steel

Summary of the pneumatic symbols based on DIN ISO 1219

Energy conversion

Single acting cylinder, return movement by external force

Single acting cylinder, return movement by spring

Double acting cylinder

Double acting cylinder with double-ended piston rod

Double acting cylinder with adjustable cushioning at end of stroke

Double acting cylinder with double-ended piston rod and adjustable cushioning at end of stroke

Double acting cylinder with adjustable cushioning at end of stroke and magnetic piston

Double acting cylinder with double-ended piston rod and adjustable cushioning at end of stroke and magnetic piston

Pneumatic motor with limited range of swivel

Pressure intensifier for the same fluid

Pressure intensifier for air and liquid

Compressor

Vacuum pump

Directional control valves

2/2-way valve, manually actuated

2/2-way valve, normally closed, solenoid actuated

2/2-way valve, normally opened solenoid actuated

3/2-way valve, manually actuated

3/2-way valve, actuated by lever

3/2-way valve, actuated by pushbutton

3/2-way valve, actuated by pedal

3/2-way valve, pneumatically actuated, monostable

3/2-way valve, pneumatically actuated, bistable

5/2-way valve, pneumatically actuated, bistable

5/2-way valve, indirect solenoid actuated, monostable

5/2-way valve, indirect solenoid actuated, bistable

3/2-way valve, normally closed, actuated by roller lever

3/2-way valve, normally opened, actuated by roller lever

3/2-way valve, normally closed, actuated by roller lever with idle return

3/2-way valve, normally closed, indirect solenoid actuated

3/2-way valve, normally opened, indirect solenoid actuated

5/2-way valve, actuated by lever

5/2-way valve, actuated by pushbutton

5/2-way valve, actuated by pedal

5/2-way valve, pneumatically actuated, monostable

5/3-way valve, actuated by lever, centre position closed

5/3-way valve, actuated by lever, centre position exhausted

5/3-way valve, indirect solenoid actuated, centre position closed

5/3-way valve, indirect solenoid actuated, centre position opened

Directional control valves generally and control mechanisms

2 positions		Roller lever with idle return	
3 positions		Direct solenoid	
Manual control - general		Direct application of pressure	
Pushbutton		Direct application by pressure relief	
Lever		Indirect by application of pressure (pilot)	
Pedal		Solenoid and pilot valve	
Plunger		Solenoid and pilot valve with manual override	
Spring		Detent for 3 positions	
Roller lever			

Air preparation

Filter		Dryer	
Water separator		Lubricator	
Water separator with automatic drain		Standard unit (filter pressure regulator with gauge, lubricator), simplified representation	
Filter with water separator with automatic drain		Pressure regulator	

Energy transmission, valves

Working line		Gauge	
Control line		Pressure source	
Exhaust line		One-way flow control valve, adjustable	
Flexible pipeline		Bidirectional flow control valve, adjustable	
Line connection		Pressure switch	
Quick coupling with mechanically opened non-return valves, coupled		Check valve with spring	
Rotary connection with 1 path		Piloted check valve	
Rotary connection with 2 paths		OR disjunction (logical sum)	
Silencer		AND conjunction (logical product)	
Quick exhaust valve			
Pneumatic capacitor

	Short stroke 1-72 Piston diameter 20 to 100 and 160 mm
	Series MCMJP 1-74 Piston diameter 6 to 15
	Swing actuators series ATM 1-76 Piston diameter 52 to 400 mm

According to customer requirements

	Cylinders to the customer's requirements 1-81 Piston diameter 8 to 600 mm
	Actuators to the customer's requirements 1-82

DOUBLE ACTING PNEUMATIC CYLINDERS ISO 15552, VDMA 24562, NF E 49003.1

STRÁNSKÝ A PETRŽÍK

Modern design, quality processing and high-quality of used parts - there are characteristics of new cylinders series. Dimensions conforms to the international standards ISO 6431, VDMA 24562 and NF E 49003.1, that is why it can replace pneumatic cylinder, which is made by any producer to these standards. Fully adjustable cushioning at end of stroke and magnet for proximity switches are standard for this series. The proximity switches can be mounted directly to the tube's groove - so no brackets are necessary. The lifetime of cylinders is more than 4000 km at standard conditions.

Working pressure	0,6 MPa
Min. pressure	0,1 MPa
Max. pressure	1,0 MPa
Temp. range	-20°C to +80°C
Working medium	modified compressed air

DOUBLE ACTING PNEUMATIC CYLINDERS VDMA 24562, NF E 49003.1

STRÁNSKÝ A PETRŽÍK

Cylinders are designed to meet the specifications of international standards ISO 6431, VDMA 24562 and NF E 49003.1, that is why it can replace pneumatic cylinder, which is made by any producer to these standards. The cylinders can work in higher temperatures by request. Fully adjustable cushioning at end of stroke is available. The cylinders can be delivered in explosion proof version (Ex, see details in ATEX options).

Working pressure	0,6 MPa
Min. pressure	0,15 MPa
Max. pressure	1,0 MPa
Temp. range	-30°C to +80°C *

*) When guide unit H or U is used on cylinder with magnetic piston, it is necessary to use cylinder with tie rod version (option No. 13).

There is no free space to mount switch bracket near the front cap when the profile tube is used (position for extend piston rod).

**) Type of pivot pin should be selected accordingly to the cylinder profile/tube - with cutout for profile or for round tube.

DOUBLE ACTING PNEUMATIC CYLINDERS VDMA 24562, NF E 49003.1 WITH PLASTIC END CAPS

STRÁNSKÝ A PETRŽÍK

The dimensions of these cylinders comply with the international standards ISO 6431, VDMA 24562 and NF E 49003.1 and are therefore easily interchangeable. The cylinders can have adjustable cushioning at end positions and are equipped with a magnet in the piston for the possibility of sensing end positions. The smooth design facilitates rinsing of dirt, the construction minimizes gaps and places with poor accessibility for cleaning the cylinder surface. The end caps are made of plastics that are chemically resistant to mild alkalis and acids used in cleaning equipment in the food industry. This type of cylinder is not a replacement for a stainless steel cylinder, but it is an affordable alternative.

Construction / materials

- caps: POM plastic
- body: drawn aluminium tube, anodized
- piston rod: ground stainless steel rod 1.4301, surface chrome-plated
- piston rod seal: FPM (FKM)
- other seals: NBR or PU
- steel parts: stainless steel 1.4301

The plastic material of the end caps has significantly better resistance than most Al alloys, and is cheaper than stainless steel materials. The cylinders are suitable for environments with moderate exposure to chemically aggressive substances, which some Al alloys cannot withstand.

DOUBLE ACTING PNEUMATIC CYLINDERS WITH LOCK DEVICE VDMA 24562, NF E 49003.1

STRÁNSKÝ A PETRŽÍK

Cylinders are designed to meet the specifications of international standard VDMA 24562 for mounting. The cylinders can work in higher temperatures by request. Fully adjustable cushioning at end of stroke is available. Lock device is actuated by spring force and deactivated by compressed air. Lock device is self-locking.

Lock device is not a safety element! The user must take relevant safety precautions!

Warning

Clamping force is purely static. When exceeding load, slipping of piston rod may occur, or piston rod and/or lock device can be damaged. Right connection and suitable designed control is necessary for impact free work. Please consult your connection with our technical dept.

Working pressure	0,6 MPa

For dimensions of pneumatic cylinder on which the lock device is attached, see page 1-5.

Connection example for pushbutton control:

Pressing the left pushbutton, the lock unit will unclamp and air which flows through right push-button into cylinder will extend it. After release pushbutton, compressed air is released from lock unit, which clamps piston rod and cylinder stops. For quick stopping of cylinder, the quick exhaust valve is used. The im-

portant on this connection is, that both chambers of cylinder are still with compressed air and for motion control discharging of air from particular chambers is used, which prevents from impacts or unwanted countermovements.

DOUBLE ACTING PNEUMATIC CYLINDERS

ISO 6431, VDMA 24562, NF E 49003.1

WITH END-POSITION LOCKING

STRÁNSKÝ A PETRŽÍK

Modern design, quality processing and high-quality of used parts - these are characteristics of the new cylinders series. Cylinders are equipped with automatic locking device in one or both end positions. When air supply failure occurs, cylinder is locked in its end position. Release then happens automatically after air supply is restored. Dimensions conform to the international standards ISO 6431, VDMA 24562 and NF E 49003.1, that is why it can replace a pneumatic cylinder, which is made by any producer to these standards. Fully adjustable cushioning at end of stroke and magnet for proximity switches are standard for this series. The proximity switches can be mounted directly to the tube's groove - so no brackets are necessary.

Warning

For the correct function of unlocking the piston rod during start-up, it is necessary to use a throttle valve on the cylinder with a function of throttling the output.

DOUBLE ACTING PNEUMATIC TANDEM CYLINDERS VDMA 24562, NF E 49003.1

STRÁNSKÝ A PETRŽÍK

Tandem cylinder is built-up from two or three cylinders, has common piston rod and almost double or triple thrust and return force. Cylinders are designed to meet the specifications of international standard ISO 6431, VDMA 24562 a NF E 49003.1 for mounting. The cylinders can work in higher temperatures by request. Fully adjustable cushioning at end of stroke is available.

Working pressure	0,6 MPa
Min. pressure	0,15 MPa
Max. pressure	1,0 MPa

*) When guide unit H or U is used on cylinder with magnetic piston, it is necessary to use cylinder with tie rod version (option No. 13).

There is no free space to mount switch bracket near the front cap when the profile tube is used (position for extend piston rod).

**) Type of pivot pin should be selected accordingly to the cylinder profile/tube - with cutout for profile or for round tube.

DOUBLE ACTING PNEUMATIC CYLINDERS ISO 21287 COMPACT

STRÁNSKÝ A PETRŽÍK

Compact cylinders are smaller than standard cylinders and they are suitable especially, when there isn't enough space for standard cylinder. Dimensions of mounting holes meets international standards ISO 6431, VDMA 24562 and NF E 49003.1, that is why standard mounting accessories can be used. There are bumpers in both end positions or fully adjustable cushioning at end of stroke.

*) Please check dimensions of thread on cylinder and accessories for piston rod, before you order it (for example: compact cylinder piston dia. 40 mm has thread M10x1,25 on piston rod, piston rod clevis for cylinder dia. 40 has thread M12x1,25, so it is necessary to order piston rod clevis for cylinder dia. 25/32, where is thread M10x1,25).

**) For use this cylinder type with guide unit, the cylinder must be equipped with internal thread on piston rod.

DOUBLE ACTING PNEUMATIC CYLINDERS CNOMO 06.07.02

STRÁNSKÝ A PETRŽÍK

Cylinders are designed to meet the specifications of international standard CETOP. Fully adjustable cushioning at end of stroke and magnetic piston for proximity sensing are available. Another materials of components and seals are available on request.

We recommend to use cylinders to ISO 15552 and VDMA 24562 for new designs.

Working pressure	0,6 MPa
Min. pressure	0,15 MPa
Max. pressure	1,0 MPa
Temp. range	-20°C to +80°C *
Working medium	modified compressed air

*) values are valid for standard gaskets

DOUBLE ACTING PNEUMATIC CYLINDERS SERIES PDSW

STRÁNSKÝ A PETRŽÍK

This series of cylinders with fully adjustable cushioning at both ends and with magnetic piston for proximity switches, is direct replacement for cylinders of DSW series of other producers.

Working pressure	0,6 MPa
Min. pressure	0,15 MPa
Max. pressure	1,0 MPa
Temp. range	-20°C to +80°C *
Working medium	modified compressed air

*) values are valid for standard gaskets

Piston diameter [mm]	32	40	50	63
Thrust at 0.6 MPa [N]	482	754	1178	1870
Thrust at 0.6 MPa [N] with double ended piston rod	415	633	990	1682
Return force at 0.6 MPa [N]	415	633	990	1682
Connection	G1/8"	G1/4"	G1/4"	G3/8"
Length of adjustable cushioning [mm]	13	14	11	16
Max. stroke [mm] *	1000*	1000*	1000*	1000*
Weight 0 mm stroke [kg]	0.43	0.90	1.10	1.70
Weight add. per 1 mm stroke [kg]	0.0015	0.002	0.002	0.004
Weight 0 mm stroke [kg] with double ended piston rod	0.56	1.23	1.33	1.80
Weight add. per 1 mm stroke [kg] with dbl. ended piston rod	0.0024	0.004	0.004	0.0065

*) Stroke of cylinder may be longer after agreement with our technical dept.

DOUBLE ACTING PNEUMATIC CYLINDERS ANTI-CORROSIVE - HYGIENIC CLEAN

STRÁNSKÝ A PETRŽÍK

Anti-corrosive cylinders are designed for use in area, where the hygienic clean is required (food processing or packing industry) or in aggressive chemical environment. The profile of the cylinder is smooth, to prevent dirt deposition. Fully adjustable cushioning at end of stroke is available as well as magnetic piston. Anti-corrosive cylinders are produced in several versions, for example: with thread on the front cap and with mounting holes on end cap, or with integrated swivel eye on end cap, and more. For using in food processing industry please choose appropriate option or contact our technical dept.

DOUBLE ACTING ROTARY ACTUATORS

STRÁNSKÝ A PETRŽÍK

Linear piston movement is converted to rotary motion by rack and pinion. The cylinders can work in higher temperatures by request. Fully adjustable cushioning at end of stroke is available.

Working pressure	0,6 MPa
Min. pressure	0,15 MPa
Max. pressure	1,0 MPa
Temp. range	-20°C to +80°C *
End position regulation	±5°
Working medium	modified compressed air

*) values are valid for standard gaskets

Construction / materials

- caps: piston dia. 20 to 40: anodized dural, piston dia. 50 and more: aluminium casting
- gear body: anodized dural
- body: drawn dural tube, anodized
- regulation flange: piston dia. 20 to 40: none, piston dia. 50 and more: zinc plated cast iron
- rack and pinion: steel 1.0060
- pinion is mounted between ball bearings

DOUBLE ACTING PNEUMATIC SWING ACTUATORS SERIES ATM

STRÁNSKÝ A PETRŽÍK

Swing actuators of the ATM series are mainly intended for the control of fittings and valves. The swing movement is ensured by a pair of toothed combs with pistons. The advantage is a constant torque in the range of the entire swinging movement. The actuators have a fitting connection according to ISO

5211 and DIN 3337. The drive is prepared for switchboards and position sensors with connection according to NAMUR VDI/VDE 3845, air can be connected directly to the threaded holes.

RODLESS PNEUMATIC CYLINDERS SERIES OSP-P

STRÁNSKÝ A PETRŽÍK

The rodless cylinders of the OSP-P series are particularly useful where there is no space for a standard cylinder. The piston rod does not extend from the cylinder. Thanks to their maximum stroke of up to 6 meters, they can also be used in applications where the use of a conventional cylinder would be impossible. This series uses the proven two-strip principle. The cylinders are equipped with a magnetic piston as standard for contactless position sensing. The air connection is standardly from the side of the cover and can be turned to any side.

MAGNETICALLY COUPLED RODLESS PNEUMATIC CYLINDERS SERIES MCRPM

STRÁNSKÝ A PETRŽÍK

Magnetically coupled rodless cylinders series MCRPM offers long strokes with reduced installation place. Thanks to max. stroke up to 2 meters, these cylinders can be used in such applications, where use of standard cylinder is impossible. There is no fix connection between piston and carriage, when the force of magnet is exceeded, the carriage will move independently on piston. This feature is utilized as a safety feature, in some applications. Force transmission is provided by strong magnets in piston and carriage. There is no adjustable cushioning at end of stroke.

20	20 mm
25	25 mm
32	32 mm
40*	40 mm

*) Only for cylinder type M

Stroke	
xxx	mm of stroke e.g.: 100 = stroke 100 mm, see table of standard strokes

Piston diameter [mm]	Standard stroke [mm]*
10, 15	100, 150, 200, 250, 300, 400, 500
20 to 40	100, 150, 200, 250, 300, 350, 400, 450, 500, 600, 700, 800

*) Please consult us if stroke is out of specification, stroke increment is 1 mm

Allowable load of cylinder with rail

Piston dia. [mm]	Max. allowable load [N]	Non-rotating accuracy [°]	Max. torsion moment [Nm]
10	4	5	0.05
15	9	5	0.18
20	11	4	0.23
25	11	4	0.40
32	15	4	0.12

Note: Non-rotating accuracy will be reduced by distortion due to longer stroke and switch rail. Values are for 300 mm stroke.

Construction / materials

- caps, carriage, rail: anodized aluminium alloy
- tube: stainless steel
- yokes: nickel plated carbon steel
- seals: NBR

In case of proximity sensing request for cylinders with rail, please use switches series RCE/RPE/RNE - see page 3-8 for detail. There is no possible to use proximity sensing for standard cylinders (without rail).

DOUBLE ACTING PNEUMATIC TELESCOPIC CYLINDERS

STRÁNSKÝ A PETRŽÍK

Telescopic cylinders are drives consisting of several pneumatic cylinders folded together. When extending, this drive can achieve strokes that exceed the total design length of the drive and therefore find their application where long strokes are required and there is no space available for standard cylinders. It is recommended to use these cylinders in a vertical position of the axis. In a different orientation, the lateral load will be exerted by its own weight and there will be increased wear of the guide surfaces and seals. The cylinders must not be exposed to lateral (radial) loads or torsional moments of external forces. The force of the telescope is reduced compared to conventional cylinders and is based on the smallest working area of the cylinder in the assembly, both in the extension and retraction directions. Telescopic cylinders are not intended for dusty and abrasive environments.

Working pressure	0,6 MPa

DOUBLE ACTING PNEUMATIC CYLINDERS WITH DOUBLE PISTON ROD VDMA 24562, NF E 49003.1

STRÁNSKÝ A PETRŽÍK

Mounting dimensions meets standard VDMA 24562. Fully adjustable cushioning at end of stroke is available. Using of double piston rod, the rotation of equipment mounted on connecting plate is prevented. This cylinder may not be efforded by torque. Piston rods are guided in slide bearings without clearance.

DOUBLE ACTING PNEUMATIC CYLINDERS ISO 15552, VDMA 24562, SERIES MCKQI3, WITH NON-ROTATING ROD

STRÁNSKÝ A PETRŽÍK

A series of cylinders with a piston rod secured against spontaneous rotation. The piston rod has a hexagonal shape and may only be loaded up to the permitted torque value. Dimensions conforms to the international standards ISO 6431, VDMA 24562 and NF E 49003.1, that is why it can replace pneumatic cylinder, which is made by any producer to these standards. Fully adjustable cushioning at end of stroke is standard, magnet for proximity switches is optional for this series.

Working pressure	0,6 MPa
Min. pressure	0,05 MPa
Max. pressure	1,0 MPa
Temp. range	-5°C to +60°C

DOUBLE ACTING PNEUMATIC CYLINDERS COMPACT, SERIES MCKJQ3, WITH NON-ROTATING ROD

STRÁNSKÝ A PETRŽÍK

A series of cylinders with a piston rod secured against spontaneous rotation. The piston rod has a hexagonal shape and may only be loaded up to the permitted torque value. This series can be used wherever short installation dimensions are required. The cylinders do not have end position damping. They can be equipped with a magnet for proximity position sensing.

Mounting accessories

You can find the range of mounting accessories for the MCKJQ3 series on our website at sappv.cz/r/v23e

DOUBLE ACTING PNEUMATIC CYLINDERS DIN ISO 6432, SERIES MCKMI, WITH NON-ROTATING ROD

STRÁNSKÝ A PETRŽÍK

A series of cylinders with a piston rod secured against spontaneous rotation. The piston rod has a hexagonal shape and may only be loaded up to the permitted torque value. Dimensions conforms to the international standard ISO 64321. Magnet for proximity switches is standard, fully adjustable cushioning at end of stroke is optional for diameters 20 and more.

Working pressure	0,5 MPa
Min. pressure	0,06 MPa
Max. pressure	1,0 MPa
Temp. range	-5°C to +60°C
Working medium	modified compressed air

Piston diameter [mm]	16	20	25
Thrust at 0,5 MPa [N]	91	141	221
Return force at 0,5 MPa [N]	73	111	173
Connection	M5	G1/8"	G1/8"
Length of adjustable cushioning [mm]	-	15	13
Max. stroke [mm]	500	300	500
Working speed [mm/s]	50 to 750

DOUBLE ACTING PNEUMATIC CYLINDERS SHORT STROKE WITH GUIDE WITH SLIDE BEARINGS

STRÁNSKÝ A PETRŽÍK

Pneumatic cylinder may be used, when small mounting dimensions are required. The cylinders can work in higher temperatures by request. There is no cushioning at end of stroke. This design features a torque resistant guide system to prevent piston rod rotation. Guiding rods are mounted in slide bearings without clearance.

Working pressure	0,6 MPa

DOUBLE ACTING PNEUMATIC CYLINDERS SERIES MCGS TWIN GUIDE

STRÁNSKÝ A PETRŽÍK

Cylinders series MCGS are due to heavy integrated bearing predetermined for applications, where is lateral load or torsional moment. It is possible to use them as stopper cylinders, where the slide bearing is used, or as push or lift cylinders, where the linear bush bearing is used. Cylinders are equipped with magnet for proximity switches. There is no adjustable cushioning, for cushioning at the end positions the rubber pad is used. Cylinders series MCGS are with compact design. The air connection is possible from two sides (from the top and side).

Working pressure	0,6 MPa
Min. pressure	0,1 MPa
Max. pressure	1,0 MPa
Temp. range	-5°C to +60°C

DOUBLE ACTING PNEUMATIC CYLINDERS SERIES MCGD TWIN GUIDE, SLIDE

STRÁNSKÝ A PETRŽÍK

Cylinders series MCGD can be used as cylinders with slide plates or body slide. Cylinders series MCGD are designed as compact makes the cylinder working more smoothly and showing the characteristics of its high-strength and high-stiffness. Cylinders are equipped with magnet for proximity switches. The recessed groove for sensor switch keeps space saving and interference is avoided. The body and plate are reserved with many holes and threads for mounting. It is suitable for various mounting requirement. There is no adjustable cushioning, for cushioning at the end positions the rubber pad is used.

Working pressure	0,6 MPa

DOUBLE ACTING PNEUMATIC CYLINDERS SERIES MCDA DOUBLE PISTON ROD

STRÁNSKÝ A PETRŽÍK

Thin and compact double piston rod cylinders series MCDA with high precision guiding are used not only for precision picking and placing. High lateral load can be applied due to highly accurate slide bearing and linear bush bearing. Cylinders are equipped with magnet for proximity switches. The body and plate are reserved with many holes and threads for mounting. It is suitable for various mounting requirement. There is no adjustable cushioning, for cushioning at the end positions the rubber pad is used.

Working pressure	0,5 MPa
Min. pressure	0,15 MPa for Ø6 0,1 MPa for Ø12 and 16 0,05 MPa for Ø20 to 32

*) Shock absorber isn't available for
piston diameter 6 mm

i In case of proximity sensing request, please use switches series RCE/RPE/RNE - see page 3-8 for detail

*) Shock absorber isn't available for piston diameter 6 mm

Examples of mounting the cylinder

Note: the range of stroke adjustment is 5 mm as standard, ranges 15 and 25 mm are optional.

Examples of mounting the load

Equipment A, AS and AT:

Equipment B, BS and BT:

Stopper cylinders are used for safety stop or separation of objects which moves on belt, roller, chain or other conveyor. Regarding the series (see description below), the cylinders can be equipped for example with hydraulic shock absorber for soft stop of moving object, or with spring for automatic separation of two objects.

For more information like technical data, order codes, allowable load and dimensions, please visit our web page on www.sappv.cz/r/v31e, www.sappv.cz/r/v32e or www.sappv.cz/r/v33e

In case of proximity sensing request, please contact our technical dept. for details

With shock absorber

The built-in shock absorber softly catches and stops the work carrier. The strength of absorber can be easily adjusted, which makes the cylinder work in the best condition, conforming to the speed of the conveyor line and the weight of the work carrier.

With roller

The top rollers with the built-in spring return in touch with the bottom of the work carrier. Automatically returns up to the original position as the work carrier pass by, and immediately works as a stopper for the next work carrier. Therefore the timing carriers does not need to be taken.

For direct stop

Rod and cylinder are designed for toughness against the large side load. Also suitable for the relatively slow-moving conveyor line with the heavy work carriers.

SINGLE ACTING PNEUMATIC CYLINDERS VDMA 24562, NF E 49003.1

STRÁNSKÝ A PETRŽÍK

Cylinders are designed to meet the specifications of international standards ISO 6431, VDMA 24562 and NF E 49003.1, that is why it can replace pneumatic cylinder, which is made by any producer to these standards. The cylinders can work in higher temperatures by request. There is no cushioning at the end of stroke.

Working pressure	0,6 MPa
Min. pressure	0,15 MPa
Max. pressure	1,0 MPa

SINGLE ACTING PNEUMATIC CYLINDERS ISO 21287 COMPACT

STRÁNSKÝ A PETRŽÍK

Compact cylinders are smaller than standard cylinders and they are suitable especially, when there isn't enough space for standard cylinder. Dimensions of mounting holes meets international standards ISO 21287, ISO 6431, VDMA 24562 and NF E 49003.1, that is why standard mounting accessories can be used. Cylinders aren't equipped with cushioning.

SINGLE ACTING PNEUMATIC CYLINDERS SERIES MCMJP

STRÁNSKÝ A PETRŽÍK

The pneumatic cylinder can be used wherever short installation dimensions are required. The cylinders do not have end position damping. They are available with piston diameters of 6, 10 or 15 mm. The installation space can be significantly reduced, as these cylinders can be recessed directly into the device body (plug mounting) or fixed with two nuts (panel mounting). The cylinders do not have a magnet for position sensing.

Working pressure	0,5 MPa
Min. pressure	0,2 MPa
Max. pressure	0,7 MPa
Temp. range	-5°C to +60°C
Working medium	modified compressed air

SINGLE ACTING PNEUMATIC SWING ACTUATORS SERIES ATM

STRÁNSKÝ A PETRŽÍK

The single-acting swing actuators of the ATM series are mainly intended for controlling armatures and valves, where it is necessary to ensure a return to the initial state when the supply of compressed air is interrupted. The swing movement is ensured by a pair of toothed racks with pistons. The torque is not constant throughout the range of swinging motion. Supplying compressed air rotates the output shaft of the drive, venting the springs returns the shaft to its initial state.

Working pressure	0,6 MPa
Min. pressure	0,2 MPa
Max. pressure	0,8 MPa
Temp. range	-20°C to +80°C *
End position regulation	±4°
Working medium	modified compressed air

								15*	7+8 springs
								16*	8+8 springs

Limit switches can be found on page 3-10

The swing direction is standard to the right (clockwise). If you require the opposite swing direction, please contact our technical department.

Notice

The torque caused by the drive must not be greater than the maximum permissible torque specified in ISO 5211 for the specific size of the mounting flange.

*) Note for the number of springs
5 and 6 does not apply to piston Ø 400 mm
13 to 16 only apply to piston Ø 400 mm

Construction / materials

- body: hard anodized extruded aluminum alloy, honed bore
- pistons: Aluminum casting or steel casting
- pinion and cam: steel
- caps: Aluminium casting
- seal: NBR, or FPM or silicone
- fasteners: stainless steel
- position indicator: plastic
- springs: spring steel

Actuator sizing

The recommended safety factor for single-acting swing actuator is 30 to 50% under normal conditions. Example of determining the size of actuator: The required torque of the fitting is 80 Nm, the torque increased by the safety factor is $80 + 30\% \text{ of } 80 = 104 \text{ Nm}$. At an inlet pressure of 0.5 MPa, it is therefore advisable to choose the ZG-ATM140 D7 actuator with 7 springs. During air movement, actuator has a torque of 308 Nm in the 0° position, and 247 Nm in the 90° position. When returned by springs, actuator has a torque of 181 Nm in the 90° position and 120 Nm in the 0° position.

We produce cylinders according to customer requirements

The Stránský and Petržík company specializes in customer solutions for pneumatic circuit designs, documentation of non-standard solutions, the production of atypical pneumatic elements, as well as the supply of complete functional units fitted with these elements.

In the event of a customer's request for a certain specific function, for a special dimension, for special materials of a pneumatic cylinder, the design department proposes a solution that is the best and most economical option for the customer. Due to long-term experience and the appropriate structuring of production capacities, the manufacturer can offer suitable solutions for individual and piece production of these special pneumatic elements.

The phase of design work also offers flexible cooperation when the customer is continuously informed about the method of solution and the solution is corrected according to requirements. Each solution is approved by the customer in order to be sure of the best applicability.

Main parameter range for specially designed pneumatic cylinders:

- piston diameters from 8 to 600 mm
- single-acting and double-acting
- various strokes including a design with multiple strokes (boxer)
- various material versions, including stainless steel versions
- various shapes
- various surface finishes
- different types and materials of sealing elements
- different variants of fastening elements

Pneumatic clamps

- piston diameters from 8 to 600 mm
- linear
- perpendicular
- any stroke or rotation angle

We manufacture complete actuators according to customer requirements

- intended primarily for controlling fittings
- double-acting, drive force up to 240 kN
- single-acting, spring force up to 65 kN
- pneumatic, max. cylinder diameter 600 mm
- hydraulic
- control circuit according to the customer's request
- the possibility of sensing the position with magnetic sensors, including the NAMUR standard
- possibility of emergency manual control
- ATEX

1

Actuators with swing (rotary) motion according to customer requirements

- single-acting
- double acting
- with gear wheel, max. torque up to 5000 Nm
- with a pulley mechanism, max. torque up to 12000 or 30000Nm
- pneumatic, max. cylinder diameter 600 mm
- hydraulic
- control circuit according to the customer's request
- the possibility of sensing the position with magnetic sensors, including the NAMUR standard
- ATEX

Pneumatic shake devices

	Ball vibrator <i>Ball diameter 8 to 36 mm</i>	2-2
	Pneumatic knocker <i>Piston diameter 32 to 80 mm</i>	2-4
	Pneumatic knocker with air tank <i>Piston diameter 32 to 80 mm</i>	2-6
	Spring knocker <i>Piston diameter 32, 50 and 80 mm</i>	2-8
	Air cannon <i>Volume 2, 8 and 50 litres</i>	2-10

Pneumatic clamp cylinders and grippers

	Swing clamp <i>Piston diameter 32 to 63 mm</i>	2-14
	Swing clamp series MCKC <i>Piston diameter 12 to 63 mm</i>	2-16
	Power clamp <i>Piston diameter 32 mm</i>	2-17
	Angular and parallel grippers series MCHA and MCHB <i>Piston diameter 12 to 32 mm</i>	2-19
	Three jaws parallel grippers series MCHG2 <i>Piston diameter 16 to 125 mm</i>	2-20

Pneumatic-hydraulic power cylinders and boosters

	Pneumatic-hydraulic power cylinders series MHPD <i>Piston diameter 50 to 125 mm</i>	2-21
	Boosters series MHB <i>Pressure increase rate 7.8 to 25</i>	2-22
	Booster regulator series MVBA <i>Pressure increase rate 2</i>	2-23
	Booster regulator series BS <i>Pressure increase rate 2 and 3</i>	2-24

PNEUMATIC SHAKE DEVICES BALL VIBRATOR

STRÁNSKÝ A PETRŽÍK

Ball vibrator could be used for bulk material release if the bulk material was adhered on walls of tubes or filling hopper. It can be used for such as materials which doesn't solidify by intensive shedding; in this case pneumatic knocker should be used.

Working pressure	0,6 MPa

Minimal tightening torque of fixing screws [Nm]	10.4	25	25	51

Order codes

Installation and operation notes

There is necessary to adhere minimal tightening torque of fixing screws (see values in table above). Fixing screws aren't included in supply. We recommend to fix fixing screws with Loctite 242E or similar adhesive.

There is necessary to check right tightening of fixing screws regularly to prevent their releasing.

The silencer is required on exhaust to avoid excessive noise. The silencer must be kept clear otherwise danger of vibrator body failure and injury impend.

Compressed air supply must be connected to port marked as V (eventually VSTUP, IN, or 1).

Construction / materials

- body and caps: anodized dural
- ball: precise bearing ball
- ball guide: hardened steel

Recommended connection

There is useful to use pressure regulator in circuit to enable vibration intensity regulation. If you need to start vibrator by another way than manually, there is necessary to use appropriate 2/2 or 3/2 valve which should be connected between pressure regulator and vibrator.

Pneumatic knocker could be used for bulk material release if the bulk material was adhered on walls of tubes or filling hopper. Compared to ball vibrator, knocker can be used for materials which solidify by intensive shedding; in this case individual shakes are well-proven. Knocker should be controlled as well as double acting cylinder. From piston diameter 50 mm incl. knockers are equipped with fully adjustable cushioning at end of return piston movement.

80	388	422	20	G3/8"	G3/8"	138	95	55	100	50	13	20	58

Recommended connection

The 5/2 valve is suitable for knocker control. Valve should be placed as closest to knocker as possible, but we recommend to fix it so that valve will be isolated to shocks from knocker. We recommend to use quick exhaust valve on exhaust (mounted parallel to knocker's axis to prevent from shocks) so as not to decrease impact intensity. It is suitable to use speed control silencer during piston return movement, to get possible to control of return speed of piston into home position to prevent chucks.

Attention: knocker is designed for make shocks only by movement of piston towards to front cap with flange! Do not allow to make shocks during piston return movement in any case! It may be the cause of permanent damage of end cap of knocker!

(A) We recommend consulting the choice of length and diameter of the marked parts of the circuit with our technical department.

PNEUMATIC SHAKE DEVICES KNOCKER WITH AIR TANK

STRÁNSKÝ A PETRŽÍK

Pneumatic knocker could be used for bulk material release if the bulk material was stuck on the walls of tubes or filling hopper. Compared to ball vibrator, knocker can be used for materials which solidify by intensive shedding; in this case individual shakes are well-proven. Knocker should be controlled as well as double acting cylinder. The function is then given by the impulse effect when the pressure drop is created on the piston, the air before the piston is released and then the piston is fired against the wall of the knocker. Thanks to this principle the hammer does not require high demands on the flow of the distributor and the flow through the hoses.

(A) We recommend consulting the choice of length and diameter of the marked parts of the circuit with our technical department.

Mounting examples

Single knocker on filling hopper

Two knockers on filling hopper
(edge distances should be different)

Single knocker on tube

Pneumatic knocker could be used for bulk material release if the bulk material was adhered on walls of tubes or filling hopper. Compared to ball vibrator, knocker can be used for materials which solidify by intensive shedding; in this case individual shakes are well-proven. The principle is simple: by pressurize of air chamber the spring is pre-tensioned and by air exhausting the spring causes the impact. This system should be used, when there is no sufficient flow rate in the line for standard pneumatic knockers without springs.

						0800050	diameter 80, stroke 50 mm

Installation and operation notes

We recommend to fix fixing screws with Loctite 242E or similar adhesive.

There is necessary to check right tightening of fixing screws regularly to prevent their releasing.

The quick exhaust valve and connections of both chambers are included in delivery, compressed air should be connected to the quick exhaust valve.

Construction / materials

- flange: zinc plated steel
- end cap: aluminium casting
- body: drawn dural tube, anodized
- piston: steel

Dimensions

Ø	A	A1	B	C2	D2	E	F	F2	G1	G2	J	H	RT	TG

80	338	309	20	G1/2"	150	94	126	173	110	60	58	13	M10	72

Recommended connection

The 3/2 valve is suitable for knocker control. The force of knocker does not depend on distance between knocker and valve. We recommend to mount the valve outside, where the knocker's shocks couldn't reach the valve.

Attention: knocker is designed for make shocks only by movement of piston towards to front cap with flange! Do not allow to make shocks during piston return movement in any case! It may be the cause of permanent damage of end cap of knocker!

Mounting examples

Single knocker on filling hopper

Two knockers on filling hopper
(edge distances should be different)

Single knocker on tube

Air cannon is used to give support to free-flow of material in bunkers, hoppers, silos, etc. The volume of reservoir of air cannon is intensely expanded into the area with blocked material. This shot will release the material, which will flow by standard way.

Working pressure	0,6 MPa
Min. pressure	0,2 MPa
Max. pressure	0,6 MPa, 1,0 MPa for 50 l
Temp. range	-25°C to +90°C
Working medium	modified compressed air

Size - volume	2 litres	8 litres	50 litres
Connections	G3/8"	G1/2"	G1/2"
Weight [kg]	10	33	76
Min. tightening torque [Nm]	25	100	100

Recommended flow capacity [l/min]	600	600	600 (2600 for external pressure vessel filling)
Max. number of shots per minute	10	6	1 (10 with external pressure vessel filling)
Flange connection	DN20 PN6	DN50 PN16	DN100 PN16

Order codes

Size - volume	Order codes
Air cannon, volume 2 litres	4500 2608 4406 0002
Air cannon, volume 8 litres	4500 2608 4406 0001
Air cannon, volume 50 litres	4500 2608 4406 0005

Installation and operation notes

We recommend to fix fixing screws with Loctite 242E or similar adhesive.

There is necessary to check right tightening of fixing screws regularly to prevent their releasing.

The quick exhaust valve is included in delivery, compressed air should be connected to the quick exhaust valve.

The air cannon must be fixed by restraining cable to the vessel.

Installation must be done accordingly to the users manual.

Warning

Detailed information regarding the connection, installation and operation of the cannon is given in the instruction manual of the device. You can find this manual at www.sappv.cz/r/w05e, or you can request it from the sales or technical department of Stránský a Petržík.

Construction / materials Type 2 litres and 8 litres

- body, end cap: steel, zinc plated
- tube: extruded dural tube
- piston: plastic
- sealing: NBR

Type 50 litres

- body, tube, end cap: steel, zinc plated (weldment)
- piston: POM
- sealing: NBR
- pressure vessel attached with a flange connection

As an accessory to the cannon, it is possible to supply a force blowing nozzle with the possibility of adjusting the angle of the spiral air flow, which will help direct the air in the required direction. More on the following pages.

Dimensions
Type 2 litres and 8 litres

Volume	A	B	C	D	E	F	G	H	I	J
2 litres	90	65	11	20	133	12	G1/4"	14	367	G3/8"

Accessories

Fixed nozzle

The fixed nozzle is used to connect the cannon to the hopper, to which the weld-on plate is welded (see below). If it is not necessary to direct the air in the hopper, it can be used separately. If it is necessary to direct the air in the hopper, a rotating nozzle is screwed onto the thread (G) and fixed (see below). It is supplied as a complete set including seals and screws required for connection to the gun. Material: zinc plated steel.

For cannons with a volume of 2 and 8 litres

For cannon with a volume of 50 litres:

Volume	A	B	C	D	E	F	G	H	I	J	K	V	Weight	Order codes
2 litres	89	112	65	90	11	9	M35x1,5	120	100	22	10	-	2,04	9700 0030 9010 1000
8 litres	245	252	125	165	18	11	M85x2	180	150	40	10	-	8,35	9700 0030 8010 1000

Rotating nozzle

The rotating nozzle is screwed and fixed to the outlet of the fixed nozzle in the hopper. Thanks to it, it is possible to direct the air flow in the desired direction. Material: zinc plated steel.

Volume	M	N	O	P	R	S	Weight	Order codes
2 litres	72	74	36	39	8	28	0,24	9700 0030 9010 2000
8 litres	209	148	86	89	10	76	2,06	9700 0030 8010 2000
50 litres	317	210	130	135	15	114	5,20	9700 0083 6010 2000

Weld-on plate

The plate is welded to the hopper and the fixed nozzle is screwed to this plate. It is necessary to create a hole in the hopper larger than ØL. It is supplied as a complete set including the gasket and screws required for connection to the fixed nozzle. Material: steel without surface treatment.

Volume	H	I	K	L	T	Weight	Order codes
2 litres	120	100	10	60	M8	0,95	9700 0030 9010 1006
8 litres	180	150	10	110	M10	1,91	9700 0030 8010 1006
50 litres	230	198	15	160	M16	5,00	9700 0083 6010 1006

Accessories

Blanking plate

The blanking plate is used to protect the opening in the fixed nozzle when there is a time delay between preparing the hopper and installing the cannon, or after removing the cannon. It prevents foreign objects or moisture from entering the hopper. It is supplied as a complete set including the screws required for connection to the fixed nozzle. Material: zinc plated steel.

Volume	C	D	E	U	Weight	Order codes
2 litres	65	90	11	6	0,49	9700 0030 9010 1005
8 litres	125	165	18	10	2,64	9700 0030 8010 1007
50 litres	180	215	18	10	3,82	9700 0083 6010 1007

Recommended connection

The 3/2 valve is suitable for air cannon control. We recommend to mount the valve outside, where the air cannon's shocks couldn't reach the valve.

Position	Description
1*	shutting-off valve
2*	filter with pressure regulator
3*	3/2 normally open valve
4	shackle for installing restraining cable
5	plug G1/4" - for example for gauge
6	draining screw
7	flange connection
8	direction of air shot
9*	reverse throttle valve
10*	safety valve

Items marked by asterisk (*) are optional - they have to be ordered separately.

(A) We recommend consulting the choice of length and diameter of the marked parts of the circuit with our technical department.

Mounting examples

There are four main problems associated with interruption of free flow of bulk solids in bunkers, hoppers, silos transfer chutes etc., as shown in Figs. 1, 2, 3 and 4. Please note these illustrations are for general information only, there being various other blocking scenarios which occur

1) Clinging

Material deposits clinging to the sides of hoppers, reducing free-flow and creating the possibility of contamination of new material if clinging deposits break free from sides of vessel.

2) Bridging

Blockage at the outlet of the storage hopper resulting in complete loss of production. This is a common fault where fine materials are being processed and the moisture content is higher than normal.

3) Ratholing

An extreme form of clinging, reducing free-flow and requiring regular topping up of small quantities of material. Loss of production will be the result of this condition and the solution, i.e., high pressure lancing vibration etc., can result in huge lumps of material breaking away and blocking the outlet.

4) Arching

Type of bridging occurring at a high level within the hopper. This condition creates a dangerous situation for operators when trying to clear the blockage and also a possible maintenance /damage issue for the works engineer and the high costs resulting from the loss of production.

Pneumatic swing clamp cylinders are used for various types of clamping. Thanks to the design, it is easy to fit the clamping material because the clamping arm rotates over the material during clamping and then clamps. The angle of rotation is 90° as standard. With the double-sided arm, it is possible to clamp the material on two opposite sides at the same time. The clamps have a magnetic piston for contactless position sensing and do not have cushioning at the end positions. The single-sided clamping arm can be turned to any position, the double-sided arm has a fixed position.

Working pressure	0,6 MPa

Caution

Do not allow lateral forces to act on the clamping arm. It could cause irreversible damage to the internal parts. The clamp is designed for clamping forces in the direction of the clamp axis (in the direction of the clamping stroke).

Caution

In order to avoid shocks in end positions (and thereby reduce the service life or damage internal parts), it is necessary to use flow control valves for both directions of movement.

Loosening, fixing, rotating or replacing the clamping arm

When loosening or fastening the arm, it is necessary to secure it in the desired position. Never tighten the locking screw without securing the clamping arm. Torque transferred to the piston rod could damage internal parts.

After unscrewing the fixing screw, tap your arm in the direction of the axis of the clamp. Do not release it by tapping it from the side, it could damage the internal parts.

Pneumatic swing clamp cylinders are used for various types of clamping. Thanks to the design, it is easy to fit the clamping material because the clamping arm rotates over the material during clamping and then clamps. For the MCKC series, the angle of rotation is fixed - 90°. The clamps have a magnetic piston for non-contact position sensing.

i In case of proximity sensing request, please contact our technical dept. for details

Pneumatic power clamps are especially suitable for clamping elements during welding, in the automotive industry or where it is necessary that the clamp does not take up a lot of space. Advantage of the clamp is that the parts moving rectilinearly are covered and are thereby protected from flying irons and dust. After clamping, the clamp is mechanically secured and there is no risk of loosening in the event of a compressed air failure.

Caution

The clamp must be correctly adjusted in its working (clamped) position. The adjustment procedure is described on the next page.

Dimensions

Arm position 90°

Arm position 180°

Clamp adjusting

For the clamp to function properly, it is very important to ensure its correct adjustment. Correct adjustment ensures the best use of force, low wear and ensures self-locking of the clamp.

Setting procedure:

1. Fit the clamp with the necessary accessories – (clamping tools).
 2. Bring the clamp into the closed state
 3. Adjust the clamp grip so that it is closed with minimal play without clamping force (can be verified, for example, with paper).
 4. Pre-tensioning (clamping device with screws, or support it with a shim of the specified thickness, in accordance with the support graph.
 5. Pre-tensioning (supporting) must respect the rotation arm in the center of the gravity of the clamping device and the value of the compressed air of the clamp. As the arm is extended, the pre-tensioning (supporting) also increases linearly.
 6. After test clamping, verify the self-locking of the clamp by releasing the compressed air. The clamps must hold clamped.
- If a too slim shim (low pre-tension) is used, the clamp will not be used sufficiently and the clamping force will be low.
If a too thick shim is used (significant preload), the clamp will not reach the self-locking clamping area and will again not achieve the necessary clamping force due to the low gear ratio of the link.

Dependence of clamping force on the shim thickness at 0,5 MPa

Dependence of clamping force on arm length at 0,5 MPa

Pneumatic grippers are used for accurate object handling in automated operation. There are angular and parallel grippers available, which allows to gripe objects with various shapes. Wide size range warrants use for small as well as for heavy objects. Grippers are delivered with magnet as standard.

Order codes

P MHB		110	
Booster		Type	
MHBS	single pressure	078	ratio 7,8x
		110	ratio 11x
MHBD	double pressure	250	ratio 25x

Operating principle of double pressure booster MHBD

This type of booster is used for applications, where the auxiliary stroke with low force and working short stroke with big force is needed. Working stroke then conform to the oil volume, which is discharged by booster. Auxiliary stroke depends on volume of external air-hydro converter (which isn't in the supply).

Quick traverse
When the air is charged from the port P1, the oil in the tank will forward the hydraulic cylinder quickly. The pressure is the same as the air pressure, but the inflow of oil is large in volume.

Operating principle of single pressure booster MHBS

Booster can be used for short stroke hydraulic cylinders, for which is volume discharged by booster sufficient. In this case, any 5/2 valve can be used for control of booster and hydraulic cylinder, which copy the movement of booster.

-
- Notice**

 - booster must be levelled
 - booster must be placed higher than hydraulic cylinder
 - frequency of use should be 6 times/min or lower

Intensified feeding
When the air is charged from the port P2, a ram will advance. the highly pressured fluid will come in to the hydraulic cylinder which will be forwarded by large thrust.

Swift release
When the air is send into port P4 and P3. the hydraulic cylinder is swiftly reversed. and at the same time the ram goes back.

Pneumatic pressure boosters series MVBA are used for increasing of air pressure. These booster regulators are able to twice increase inlet pressure, but due to safety, the maximal output pressure is up to 1,6 MPa. Boosters can be used in applications, where there is no sufficient pressure in regular distribution. The advantage is, that no additional power is required, so also heat generation is reduced. They are fully autonomous and they start to „produce“ high pressure air, when compressed air is brought to inlet port. **For more information, please visit our web page on www.sappv.cz/r/w14e**

Working (supply) pressure	0,1 to 1,0 MPa

	4300 G1/2", max. 1,6 MPa

Operation notes

- If the outlet capacity is undersized, pulsation may occur.
- Make sure to install a mist separator at the inlet side of the booster regulator, supply air must be dry - non lubricated
- The booster regulator has a sliding part inside, and it generates dust. Also, install a cleaning device such as an air filter or a mist separator on the outlet side as necessary.
- Depending on the necessity, install a silencer on the exhaust port of the booster regulator to reduce the exhaustion sound.
- Provide a dedicated pipe to release the exhaust air from each booster regulator. If exhaust air is converged into a pipe, the back pressure that is created could cause improper operation.

Pressure boosters (pressure amplifiers) are used to increase the pressure delivered by a compressor at the expense of proportional flow loss. They do not replace the compressor, but provide a higher pressure for a limited time. They are usually used to increase the force of pneumatic cylinders while maintaining smaller overall dimensions and weight, for high-pressure blowing, component testing, pressure testing, etc.

Operation notes

Connection to the compressed air network and functions

In case of direct connection of the booster to the system, a 3/2 valve (6) should be used to open and close the circuit at the output of the multiplier. An air filter should also be included at the output, as the booster contains moving

parts. A filter should be included at the input to separate water and mist from the air, the air must not be lubricated. The booster provides high-pressure air in a "pulsating" manner, therefore it is recommended to use an air tank (4) at the output of the booster to avoid pulsation during use. To speed up the initiation/filling of the system, it is recommended to connect a one-way check valve, as shown in figure (5). The selection of a pressure booster does not only include the compression ratio, but above all a sufficient volume of the air tank to ensure the correct supply of the consumers. First, it is necessary to calculate the volume of air taken by the consumers (cylinders, blowing nozzles, etc.), and then determine the corresponding volume of the air tank. Silencers must be installed on the operating exhausts (not included). The booster is activated automatically as soon as the inlet pressure (p1) is applied and operates until the outlet pressure (p2) reaches twice the inlet pressure (at a compression ratio of 1:2) or three times (at a ratio of 1:3). The booster is not designed for free exhaust operation, but always requires a connected application. The outlet pressure can be regulated using a pressure regulator if necessary. If no air is being extracted at the outlet, the integrated check valves allow the increased pressure to be maintained even if the inlet pressure is removed.

Piston diameter 63 mm - output pressure 3,0 MPa

Piston diameter 100 mm - output pressure 2,0 MPa

Piston diameter 100 mm - output pressure 3,0 MPa

Calculation of the filling time of the tank

Example of calculating the filling time of a tank with a volume of 50 liters when increasing the pressure from the starting pressure of 0,7 MPa to the final pressure of 0,9 MPa using the pressure amplifier PBS00106312 with an input pressure of 5 bar. Values for the calculation: input pressure: $P_1 = 0,5$ MPa, initial pressure in the tank: $STP = 0,7$ MPa, final pressure in the tank: $FTP = 0,9$ MPa, tank volume: $V = 50$ l. We calculate the ratio STP/P_1 and FTP/P_1 , i.e. $0,7/0,5=1,4$ and $0,9/0,5=1,8$. From the graph, we determine the time values corresponding to the specified pressure ratios, i.e. for $P_2/P_1=1,4$ it is a value of approximately 2,5 s, for a ratio of 1.8 it is a value of 8,5 s. We subtract the values, i.e. $8,5-2,5=6$ s. The pressurization time of 10 l to a pressure of 0,9 MPa under the specified conditions is 6 s. Pressurization of 50 l will therefore be a multiple of $6 \times 5=30$ s.

PROXIMITY SWITCHES SERIES KT-21 AND KT-50

STRÁNSKÝ A PETRŽÍK

KT-xxP series of electronic (PNP) proximity switches eliminates negative features of reed relays. Those switches are fully electronic, which brings excellent properties, long lifetime and integrated protections. We also offer reed switches, series KT-xxR. Series KT switches can be used with all types of Stránský a Petržík's cylinders. For various types of cylinders the right bracket must be used. Switches KT-50 can be used with cylinders with T-slot made by other producer.

PBL-1	2290 5014 0000 0000	Ø10 to 63

How to use PAB bracket:

Step 1:
Start by keeping screw 3 to 4 turns into barrel nut on the end of band assembly

Mark hole

Step 2:
Place the screw head into clamp slot and wrap the band around the cylinder, position the pin with the nearest hole on the band and mark the hole with permanent marker

Pin

Step 3:
Remove clamp assembly from the cylinder. Locate the marked hole and cut the band at midway between next two adjacent holes

Step 4:

Insert cut of the band into a flat slot opposite from the clamp slot. Place the chosen hole over the pin and bend the band firmly down with thumb pressure. Then wrap the band around the cylinder barrel and re-insert screw head into clamp. Position the switch and tighten.

Cables with M8x1 connector

Description	Order codes - straight connector	Order codes - elbow connector

These proximity switches are produced as reed switches or electronic switches. Advantage of these switches is that they can be used with all types of Stránský a Petržík's cylinders. It means, that there can be used not only several diameters but also more types of cylinders (VDMA, compact, DIN ISO, etc.) in pneumatic circuit and for all cylinders only one type of switch can be used (it is necessary to select proper bracket for various types of cylinder - see table below). It brings cost savings at designing electrical circuits, at connection as well as at circuit maintaining.

Switch can be used with cylinders with T-slot made by other producers.

Technical data of series RZT7

Description	Value
Supply voltage U_b [V]	5 to 30 DC / AC
Max. switching power [W]	≤ 6
Continuous current I_a [mA]	≤ 500 (DC), ≤ 300 (AC)
Overrun distance, typ. [mm]	10
Enclosure rating to EN 60 529	IP 67
Temperature range T_a [°C]	-20 to +70
Housing material	plastic
Cable	PVC, 3 x 0.12 mm ²
Function indicator	LED

PROPORTIONAL POSITION SENSOR SERIES MPS WITH ANALOG OUTPUT

STRÁNSKÝ A PETRŽÍK

Proportional position sensor with analog output (current as well as voltage) is suitable for application, where it is necessary to know exact position of the piston. It is a compact sensor, which can be fixed into the T slot. It is a fully electronic sensor, which brings excellent properties, long lifetime and integrated protections. There are several types with various measuring ranges available for various cylinder strokes. If the cylinder stroke is smaller than measuring range, the starting and end position can be adjusted by user on the sensor.

Technical data

Description	Value
Supply voltage U_b [V]	10 to 30 DC, $\pm 10\%$
Continuous current I_a [mA]	25
Max. load resistance, current output [Ω]	500
Min. load resistance, voltage output [$k\Omega$]	2
Temperature range T_a [$^{\circ}C$]	-20 to +70
Connection	PUR cable 2m or cable 0.3 m with M8x1 connector
Function indicator	LED
Overload and short-circuit protection, reverse polarity protection

PROXIMITY SWITCHES SERIES RCE, RPE AND RNE

STRÁNSKÝ A PETRŽÍK

RPE and RNE series of electronic (PNP and NPN) proximity switches eliminates negative features of reed relays. Those switches are fully electronic, which brings excellent properties and long lifetime. We also offer reed switches, series RCE. All series switches can be used with cylinders series M*.

Technical data

Description	Value / Switch type

2) Except piston diameter 20 mm - in this case please contact our technical dept.

3) Except piston diameter 20 and 50 mm - in this case please contact our technical dept.

Warning

Do not exceed specification, permanent damage to the sensor may occur.

Rules for using of proximity switches

- For reed switch type sensors, polarity must also be observed for the proper functioning of LED. Connect the brown wire in series with load positive (+) and the blue wire to negative (-) of power source. If the polarity is reversed, reed switch remains functional but LED will remain in "OFF" state.

- For solid-state type sensors, polarity must also be observed. Connect brown (red for SP-472 switch) wire to the positive (+) and the blue to the negative (-) of DC power source. The black (white for SP-472 switch) wire must connect to the load only. If the black (white for SP-472 switch) wire is accidentally connected to the power source, permanent damage to the sensor may occur.

- An external protection circuit may be required if the reed switch is used with inductive load. For DC voltage, the diode must be connected, for AC voltage, the RC circuit must be connected as shown below.

- Keep sensors away from stray magnetic field to prevent malfunctions.
- When using reed switch with capacitive load or if the lead wire length exceed 10 meters, an inductor must be installed in series.

LIMIT SWITCHES FOR PNEUMATIC SWING ACTUATORS SERIES ATM

STRÁNSKÝ A PETRŽÍK

Position sensors of the ZLS series for actuators with swing movement of the ATM series have visible and clear optical position signaling. The sensor cam is easily and quickly adjusted without special tools. The terminal block has 8 contacts available for easy wiring. Thanks to the connection interface according to Namur VDI/VDE 3845, connecting the sensor is quick and easy.

*) Please check dimensions of thread on cylinder and accessories for piston rod, before you order it (for example: compact cylinder piston dia. 40 mm has thread M10x1.25 on piston rod, piston rod clevis for cylinder dia. 40 has thread M12x1.25, so it is necessary to order piston rod clevis for cylinder dia. 25/32, where is thread M10x1.25).

PISTON ROD EYE

Supply contains:
1 pc eye

i Can be combined with:

Narrow swivel flange
Rectangular swivel flange
(page 4-9)

PISTON ROD PROTECTIVE COVER

- FOR ALL CYLINDER TYPES
- FOR ANY EQUIPMENT

Supply contains:
1 pc protective cover

Size	D	E	For cylinders Ø	Number of annulus for 100 mm stroke	Width of 10 pcs annulus	Order codes
5	20	60	32, 40	10	10	2195 0000 5 zzzz xxx
4	40	80	50, 63, 80	8	10	2195 0000 4 zzzz xxx
3	50	130	100, 125	4	10	2195 0000 3 zzzz xxx
2	60	155	160, 200	3	10	2195 0000 2 zzzz xxx
1	100	180	250, 320	3	10	2195 0000 1 zzzz xxx

Notice: zzzz means cover stroke in mm, xxx is ordinal number, which will be assigned by sales dept. on the base of A,B,H and I dimensions.

Material: double-sided hyped-up fabric, water, oil and dust resistant

Temperature range: -20 to +80°C

Covers are fixed by clamps - there is necessary to select proper size according to diameters, to which will be the cover fixed - see below.

We produce protective covers to customer's request (length, form, flange form. If you need protective cover for our pneumatic cylinder, just let us know order code of that cylinder and order code of mounting accessories, which is mounted on piston rod. If you need protective cover for another application, send us a request with dimensions which are important and we will send you offer by return.

Cover clamp

Material: zinc plated steel

4

i Note: There is necessary to use standard foot mounting for cylinders DIN ISO 6431, VDMA 24562 (order code 2101 2100 0xxx 0000) when mounting on end cap. See page 4-5.

BOXER FLANGE MOUNTING FOR CYLINDER

- ISO 15552, VDMA 24562, NF E 49003.1
- DIN ISO 6431, VDMA 24562, NF E 49003.1
- COMPACT

Supply contains:
1 pc flange
4 pcs screws

Using the boxer flange mounting, the 2 cylinders can be mounted together by end caps, so the piston rods will move against each other. If the cylinders will have the same stroke, the final assembly will have 3 positions when cylinders will be in end positions. When the cylinders will have various strokes, the final assembly will

have 4 positions.

Attention: the body of cylinders are moving in this assembly, so it is necessary to use flexible air connections.

VALVE BRACKET FOR CYLINDER

- ISO 15552, VDMA 24562, NF E 49003.1
- DIN ISO 6431, VDMA 24562, NF E 49003.1
- COMPACT

Supply contains:

- 1 pc bracket
- 2 pcs screws

Valve bracket should be fixed on front or rear cap of cylinder. Bracket is universal, it means, that any valve can be attached on it - it is necessary to drill fixing holes in bracket according to the holes in valve. This simple but practical bracket should solve not only the problem with placing of valve in application, but it helps to better look and compact impression of application (it is not necessary to lead and fix tubes for inlet and outlet of cylinder).

- 2 pcs guide rods
- 1 pc flange for fix to the cylinder

Guide unit can be mounted to any pneumatic cylinder to VDMA 24562 (there is necessary to use option 13 for cylinders with magnetic piston dia. 32 to 63 mm), ISO 15552 or compact cylinders (only for cylinders with internal thread on piston rod). Guide secures piston rod against rotation, high torque loads and radial forces. Guide rods are mounted in ball bearings without clearance.

Solenoid actuated valves series K, KI and LV7 with spool and sleeve assembly

The spool and sleeve assembly is a matched set consisting of a stainless steel spool assembled into a stainless steel sleeve. The steel used is a 440C stainless hardened to 62 Rockwell „C“. Thanks to the precise grinding and honing of both parts the tolerance is such that air is entrained between the spool and sleeve forming an „airbearing“ effect which ensures safe, wear-free operation with extremely short cycles and low shift forces. At the same time reliability of the spool and sleeve assembly is maintained both for lubricated and non-lubricated air. Under both sets of conditions the spool moves with minimal friction leading to very low shifting forces enabling quick response.

The hardness of the spool and sleeve ensures no damage from pipe scale or other airline contaminants while the stainless steel construction combats any line moisture. These features will allow a typical service life in excess of 200 million cycles. The spool is balanced with respect to air pressure and coupled with the absence of wearing parts allows extreme versatility of valve applications. The air can flow in any direction at any pressure or vacuum. This unique design enables cylinder working strokes at one pressure while unloaded reverse strokes can be carried out economically at low pressures. Valves that contain a spool and sleeve assembly are marked with this symbol in the catalog:

A new type of solenoid pilot actuated valve, which offers not only a large flow rate, high durability but also better availability. Valves can be used as standalone or they can be mounted on manifolds. They can replace L1 and L2 series valves because they have the same connection dimensions, unlike the L1/L2 series, the coil can be rotated in the desired direction. Connector and coil are included in delivery.

Valves series K contains spool and sleeve assembly, which guarantee long lifetime of valve.

Series	K1	K2	K3
Port	G1/8"	G1/4"	G3/8"
Connection of external pressure supply port	M5	M5	M5
Flow capacity [Nl/min]	1000	1700	3500

Conversion of internal to external air pilot supply

External air pilot supply is used, when air supply pressure is lower than 0.1 MPa (1 bar) as well as for vacuum and or if another medium than compressed air is used. It is necessary to change standard setting (when air pilot supply is drawn from valve supply port 1) in that cases.

When converting from internal to external pilot supply, please proceed as follows:

- 1) Dismount connector
- 2) Unscrew for M3 screws, remove valve lid with pilot valve, pay attention to the O-ring between the cover and the valve body
- 3) Remove the pin from the valve body and insert it into the hole with the O-ring in the lid, check if the O-rings fits correctly in the lid and put the lid back (tightening torque 1.5 Nm), insert and fasten the connector
- 4) Unscrew plug on side of valve and connect modified compressed air with pressure 0.1 to 1.0 MPa

Series K valves manifold assembly

Manifolds for K series valves are supplied separately and it is necessary to use one pair of end plates, which are also used as manifolds for 2 valves, and requested number of middle plates (1 plate for 1 valve) to create the complete manifold assembly. It is possible to add other positions to the assembly at any time, just remove the end plate and add additional middle plates. If it is necessary to create a reserve during assembly, it is recommended to use a blank station plate, which can be easily replaced by valve. Max. number of valves in one manifold is 10. Any valve series K may be used for manifold assembly (it doesn't matter if valve is single or double solenoid actuated or air actuated). But it is necessary to use adaptor, which must be mounted between valve and manifold. Valves mounted on manifold could be unmounted separately by unscrew of 2 bolts, which are accessible from top side (side with ports 2 and 4 of valves).

Series	Order code	Weight [kg]	Application
K1	2500 8181 0600 0003	0.26	End plates (1 pair) for 2 valves
K1	2500 8181 0600 0002	0.08	Middle plate (extension for 1 valve)
K1	2500 8181 0600 0001	0.02	Adaptor plate (1 plate per station)
K1	2500 8181 0600 0004	0.05	Blank station plate
K2	2500 8181 0800 0001	0.29	End plates (1 pair) for 2 valves
K2	2500 8181 0800 0002	0.11	Middle plate (extension for 1 valve)
K2	2500 8181 0800 0003	0.04	Adaptor plate (1 plate per station)
K2	2500 8181 0800 0005	0.07	Blank station plate

Adaptor plate for mounting the valve on the manifold (1 plate per station)

Assembly procedure:

- 1) On the middle plate, check that the sealing rings in the recesses are seated correctly. Place the middle plate on the end plate pins and secure with two countersunk screws.
- 2) Repeat the procedure with the other middle plates.
- 3) On the other end plate, check that the sealing rings are seated correctly in the recesses. Place the end plate on the pins of the middle plate and secure with two countersunk screws.
- 4) Mount the adapter on the inlet and exhaust side (ports 1,3,5) on the valve using two M4x10 screws. Make sure that the sealing rings are fitted correctly in the recesses.
- 5) Mount the valve with the adapter using two M3x12 screws in the required position on the manifold. Make sure that the sealing rings are fitted correctly in the recesses.
- 6) Fasten the manifold with valves with all four holes $\varnothing E$.

For more information about assembly see sappv.cz/r/e05e

SOLENOID ACTUATED VALVES SERIES K WITH NAMUR CONNECTION

STRÁNSKÝ A PETRŽÍK

A range of indirectly operated valves with NAMUR connection (according to VDI/VDE 3845), based on our popular K-series valves. Available in 5/2 versions with one or two coils and 5/3 with a central position that is both vented and pressurized. A 3/2 version can be created using an adapter that is ordered separately. Using a connection plate, the valve can then be mounted directly on the cylinder inlet. A connector, sealings and screws are also included.

Valves series K contains spool and sleeve assembly, which guarantee long lifetime of valve.

Series	K2 NAMUR	
Port	G1/4" (NAMUR for outlets 2 and 4)	G3/8" (NAMUR for outlets 2 and 4)
Connection of external pressure supply port	M5	M5
Flow capacity [Nl/min]	1700	1700
Working pressure [MPa]	0,15 to 1,0 (vacuum to 2,1 when external pilot supply is used)	
Pilot pressure range [MPa]	0,15 to 1,0	
Power input [W/VA] (standard coils)	3W for DC voltage, 7,5 VA inrush and 5 VA hold for AC voltage	
Response time for DC voltage [ms]	10 energize, 35 de-energize	
Response time for AC voltage [ms]	7 energize, 35 de-energize	
Temperature range [°C]	medium temperature max. 50, ambient temperature -20 to +50	
Enclosure (standard coils)	IP65 with sealed and fastened connector

	G1/2"	2101 8100 0100 0000

Adapter for making of 3/2 function (from function 52 80 90)

By mounting this adapter on a valve with one coil (function 52 80 90), a valve with a NAMUR connection with a 3/2 design is created. If the adapter is mounted on the valve with the silencer facing the coil, the valve will be normally open; if the adapter is mounted with the silencer facing away from the coil, the valve will be normally closed.

SOLENOID ACTUATED VALVES SERIES MVSC

STRÁNSKÝ A PETRŽÍK

The popular valve series, which replaces valves series L and J. The basic usable features are kept and brings some improvements such as lower wattage, comparable or bigger flow capacity and better accessibility. Valves are solenoid pilot actuated. The product range covers functions 5/2 single or double solenoid and 5/3 with centre closed and exhaust position and position with pressure centre. Connector and coil are included in delivery.

This valve series contains rubber gaskets.

Series	MVSC 220	MVSC 300	MVSC 460
Ports	G1/4" (G1/8" for exhaust port 3 and 5)	G3/8"	G1/2"
Flow capacity [Nl/min]	980, or 860 for function 5/3	1905, or 1355 for function 5/3	2730, or 1630 for function 5/3
Working pressure [MPa]	0.2 to 0.8, or 0.3 to 0.8 for function 5/3		
Power input [W, VA]	2W for DC voltage, 6/4.9VA for AC voltage (inrush/hold)		
Response time [ms]	30, or 40 for function 5/3	50	50
Coil voltage tolerance	±10%		
Temperature range [°C]	ambient temperature -5 to +50		
Enclosure	IP65 with sealed and fastened connector

Order codes of manifolds

PMVSC 220 - 5B 4

Size	
220	series MVSC and MVAA 220, thread G1/4"
300	series MVSC 300, thread G3/8"
460	series MVSC and MVAA 460, thread G1/2"

Number of positions	
2 to 10	for 2 to 10 valves

It is possible to mount series MVSC and MVAA valves on manifold with predefined number of position. It isn't possible to add another position to created assembly - it could be necessary to replace manifold or create another manifold. If there is possibility that more valves will be needed in future, we recommend to use manifold with more positions and use blocking plates for unused positions. Valves are mounted to manifold directly - no adaptor is necessary. Valves mounted on manifold could be unmounted separately by unscrew of 2 bolts, which are accessible from top side (side with ports 2 and 4 of valves). Each separate coil must be wired with separate electrical cable.

Order codes for blank station plates:

Series	Order codes
220	PMVSC 220 -5P
300	PMVSC 300 -5P
460	PMVSC 460 -5P

i Manifolds with internal wiring and common 25-pin SUB-D connector are also available. These manifolds are for valves series 220, 300 and 460. Number of stations is 2 to 12 as standard, maximum is 20. Voltage of coils is 24V DC. For more information about these manifolds, please contact our technical department.

SOLENOID ACTUATED VALVES SERIES MVSE

STRÁNSKÝ A PETRŽÍK

This valve series that complement favorite MVSC series with their parameters, over which they can handle up to 1.2 MPa. Other parameters, such as power consumption and flow, are the same or similar. The MVSE series is indirectly controlled. All 5/2 with one or two coils and 5/3 with medium closed, ventilated and under pressure (5/3 not available for MVSE-500) are available. The valves can be used directly or can be mounted on a manifold.

This valve series contains rubber gaskets.

Series	MVSE 260	MVSE 300	MVSE 500
Ports	G1/4" (G1/8" for exhaust port 3 and 5)	G3/8"	G1/2"
Flow capacity [Nl/min]	980, or 860 for function 5/3	1905	2180
Working pressure [MPa]	0.2 to 1.2 or 0.3 to 1.2 for function 5/3		
Power input [W, VA]	2.0W for DC voltage, 6/4.9VA for AC voltage (inrush/hold)		
Response time [ms]	40, or 35 for function 5/3	50	50
Coil voltage tolerance	±10%		
Temperature range [°C]	ambient temperature -5 to +50		
Enclosure	IP65 with sealed and fastened connector

It is possible to mount series MVSE valves on manifold with predefined number of position. It isn't possible to add another position to created assembly - it could be necessary to replace manifold or create another manifold. If there is possibility that more valves will be needed in future, we recommend to use manifold with more positions and use blocking plates for unused positions. Valves are mounted to manifold directly - no adaptor is necessary. Valves mounted on manifold could be unmounted separately by unscrew of 2 bolts, which are accessible from top side (side with ports 2 and 4 of valves). Each separate coil must be wired with separate electrical cable.

SOLENOID ACTUATED VALVES SERIES MVSE

STRÁNSKÝ A PETRŽÍK

The new valve series, which continues with parameters the series MVSC. They are suitable for large diameter cylinders actuating. Valves series MVSE are solenoid pilot actuated. The product range covers functions 5/2 single or double solenoid. Connector and coil are included in delivery.

This valve series contains rubber gaskets.

Series	MVSE 510	MVSE 600	MVSE 600

SOLENOID ACTUATED VALVES SERIES MVSN WITH NAMUR CONNECTION

STRÁNSKÝ A PETRŽÍK

Valve series with connection according to NAMUR (VDI / VDE 3845)
The MVSN series is indirectly controlled. All 5/2 with one or two coils and 5/3 with medium closed, ventilated and under pressure are available. Version 3/2 can be made using an adapter that is ordered separately. Using the connection plate, the valve can be mounted directly on the cylinder inlet. A connector is also included.

This valve series contains rubber gaskets.

Series	MVSN 300
Ports	G1/4" (NAMUR for outlets 2 and 4)
Flow capacity [Nl/min]	1905, or 1630 for function 5/3
Working pressure [MPa]	0.2 to 0.8 or 0.3 to 0.8 for function 5/3
Power input [W, VA]	2W for DC voltage, 6/4.9VA (230V) or 4.8/4.4 (24V) for AC voltage (inrush/hold)
Response time [ms]	50
Coil voltage tolerance	±10%
Temperature range [°C]	ambient temperature -5 to +50
Enclosure	IP65 with sealed and fastened connector
Weight [kg]	0.42 for 5/2 1 coil, 0.51 for 5/2 2 coils, 0.76 for 5/3

Type 5/2 with one coil:

Type 5/2 with two coils:

Type 5/3:

Adapter for making of 3/2 function - PMVSN 300 - A:

Using this adapter on valve 5/2 with one coil (function 4E1) changes the valve to 3/2 function with NAMUR connection. Adapter can be positioned with silencer toward to the coil, then the function is normally opened, if the silencer will be opposite to the coil, function will be normally closed.

Connection plate for mounting the valve on cylinder inlet PMVSN 300 -C:

SOLENIOD ACTUATED VALVES SERIES KI ISO 5599/1 COMPACT

STRÁNSKÝ A PETRŽÍK

Our new solenoid actuated valve series KI is based on the classic ISO series, but has higher flow rate and is also highly economical, compared to the ISO 5599/1 Compact series. Air pilot is used for valve actuating, so it is an indirectly actuated valve. The valves are mounted on base plates standardized according to ISO. The coils and pilot valves are common with the K series. Coil can be rotated to best suit the application. Valves can be used on the base plate individually or mounted as a group assembly.

Valves of the KI ISO 5599/1 Compact series contain a spool and slide assembly, which guarantees a long service life of the valve.

Series	KI ISO 1 Compact	KI ISO 2 Compact
Flow capacity [Nl/min]	1200	2800
Working pressure [MPa]	0.15 to 1.0 (vacuum up to 2.1 MPa when external air pilot supply is used)	
Pilot pressure range [MPa]	0.15 to 1.0	
Power input [W, VA] (standard coils)	3W for DC voltage, 7.5VA inrush and 5VA hold for AC voltage	
Response time energize / de-energize [ms]	20 / 35	
Temperature range [°C]	medium temperature max. 50, ambient temperature -20 to +50	
Enclosure (standard coils)	IP65 with sealed and fastened connector

SOLENOID ACTUATED VALVES SERIES MVSY

STRÁNSKÝ A PETRŽÍK

The new valve series with small space requirements and with improved technical parameters (for example lower power consumption). Versions for direct usage (in-line) as well as manifold valves are available. Valves are solenoid pilot actuated. The product range covers functions 5/2 single or double solenoid and 5/3 with centre closed and exhaust position and position with pressure centre. Connector with 0.5m cable and coil are included in delivery.

This valve series contains rubber gaskets.

Series	MVSY 100	MVSY 156	MVSY 188
Ports	M5	G1/8"	G1/4"(G1/8" for exhaust port 3 and 5)
Flow capacity [Nl/min]	200	630	760
Working pressure [MPa]	0.2 to 0.7	0.15 to 0.7, or 0.2 to 0.7 for function 5/3	
Power input [W, VA]	1.2W for DC voltage, 2.5/1.6VA for AC voltage (inrush/hold), LED indicator		
Response time [ms]	12, or 15 for function 5/3	19, or 32 for function 5/3	23, or 50 for function 5/3
Coil voltage tolerance	±10%		
Temperature range [°C]	ambient temperature -5 to +50		
Enclosure	IP40

188M	series MVSY 188, without threads, for manifold *

*) These valves are without threaded ports. Threaded ports are on the side of manifold - for details see below.

) It is **not possible to use the straight push-in fittings for a tube Ø6 with this valve.

Function	
41	5/2 monostable (with 1 coil)
42	5/2 bistable (with 2 coils)
42C	5/3 with closed centre position
42P	5/3 with pressure centre position
42R	5/3 with exhaust centre position

Voltage	
D6	6 V DC ± 10%
D12	12 V DC ± 10%
D24	24 V DC ± 10%
A220	230 V AC ± 10%, 50-60 Hz

Connector with 0.5m cable is included in delivery. Available are also connectors with cable:

length 5m ... order code PMVSY-C5
length 10m ... order code PMVSY-C10.
See page 5-34.

Order codes of manifolds

PMVSY 100 M-5M 4

Size	
100	series MVSY 100
156	series MVSY 156
188	series MVSY 188

Type	
-5B	valve with threaded ports
M-5M	valve without threaded ports, manifolds with ports*

Number of positions	
2 to 10	for 2 to 10 valves

*) For series MVSY 100, it is only possible to use the straight cylindrical push-in fittings for tube Ø4 (N102-004-000-01) and Ø6 (N102-006-000-01). See page 10-2.

Manifolds for valves with threaded ports - PMVSYxxx4... - these valves are with threads on all five ports (ports 1,2,3,4 and 5). In this case, the manifold PMVSYxxx-5Bx, which has only ports 1,3 and 5 is used.

Also available are **manifolds for valves without threads** - PMVSYxxxM4... - these valves are without threads and ports - they are entirely intended for use on manifold. In this case, manifold PMVSYxxxM-5Mx, which has common ports 1,3 and 5 and outlet ports 2 and 4 for each valve position, is used. This lay-out simplifies assembly and maintenance - valve can be easily unmounted without unplugging of connections on ports 2 and 4.

Order codes of blocking plate for manifolds

PMVSY 100 - 5P

Size	Blocking plate
100 series MVSY 100	-5P blocking plate
156 series MVSY 156	
188 series MVSY 188	

Blocking plates are used for blocking outlets from manifold in case, that not all positions are used presently and expansion of the assembly is planned in the future. In that case, the blocking plate will be changed with valve and manifold is without change.

Order codes of brackets of individual valves with threaded ports

PMVSY 100 - 1A

Size	Bracket type
100 series MVSY 100	-1A horizontal
156 series MVSY 156	-2A vertical
188 series MVSY 188	

Horizontal bracket

Vertical bracket

Brackets can be used for individually mounted valves with threaded ports - valves are without through hole for fixing, that is why it is better to use bracket for easy assembly in some cases. **Vertical brackets are only for monostable valves (4/2, one coil, function 41).**

The fieldbus system of the MVE series system allows the connection and control of valves and other inputs and outputs using the EtherNet / IP protocol. Up to 23 channels are available in one set for the control of associated valves (MVSY 100 and MVSY 156 series) as well as up to 8 input and output units, with 8 inputs or 8 outputs in each unit. It is therefore easy to connect and control the island with valves and send back to the control system, for example, the states of the end position sensors. The configuration can be modified using a web browser or using a configuration program on a computer. Both the main and I/O units have LEDs that inform the user of the status.

Order codes of fieldbus system with valve and serial interface

P MVE - 156C6-5B 4 - SSDC - G - EA P 2

Model - series MVSY 100

Number of valves	
2 to 12	number

Valve COM spec.	
-	-COM
N	+COM

SI unit	
	without
EA	EtherNet/IP

SI unit output	
P	-COM
N	+COM

Number of I/O units	
	none
1 to 8	number

Valve type		
S		5/2 monostable (with 1 coil)
D		5/2 bistable (with 2 coils)
C		5/3 with closed centre position
P		5/3 with pressure centre position
R		5/3 with exhaust centre position
B	blocking plate (w/o valve)	

Notes:

- SI unit output and valve COM spec. must be the same.
- The valve arrangement is numbered as the 1st station from the SI unit side, use as many letters as there are valves in the code
- I/O unit cannot be installed without SI unit.
- I/O units must be ordered and specified separately, they will be delivered separately.

Order codes of I/O units

Order code	Description
PMVE-100-DIPA	DI unit - 8 inputs PNP
PMVE-100-DINA	DI unit - 8 inputs NPN
PMVE-100-DOPB	DO unit - 8 outputs PNP
PMVE-100-DONB	DO unit - 8 outputs NPN

Example of order codes of fieldbus system assembly with valves and I/O units

PMVE-156M4-5M6-DSSSSS-G-EAP3

Set of 6 valves MVSY 156 (1x 5/2 bistable, 5x 5/2 monostable) with tube ø4 fittings on the manifold, -COM, incl. SI unit for 3 I/O units.

2 pcs ... PMVE-100-DIPA 2 digital input units PNP (total 16 inputs)

1 pc ... PMVE-100-DOPB Digital output unit PNP (total 8 outputs)

Technical data of SI unit (serial interface)

Description	Value
Interface protocol	EtherNet/IP
Communication speed	10/100 Mbps
Configuration file	EDS
Power connector	M12 (5 pins)
Control & input power supply	24V DC class 2, 2A
Output power supply	24V DC class 2, 2A
Consumption	12W
Polarity of output for valves	PNP (-COM), NPN (+COM)
Power supply of valves	24V DC class 2, 2A
Number of valve outputs	23
Suitable valves	MVSY 100, MVSY 156, 24V DC
Fail safe of valves	hold, off, setting value
Protective function for valve	short circuit protection
Working environment	temperature -20°C to +50°C, humidity 10% to 90% RH

For more information please visit our web page on www.sappv.cz/r/e13e

Technical data of DI unit (digital input)

Description	Value
Input type	PNP or NPN
Input connector	8x M8 (3 pins)
Number of inputs	8 (1 input / connector)
Sensor supplied voltage	24V DC
Max. sensor supplied current	0.25A / connector, 2A / unit
Rated input current	9 mA
ON voltage (NPN input)	≥17V
OFF voltage (PNP input)	≤5V
Features	Short / open - circuit detection
Power supply voltage	24V DC class 2, 2A
Working environment	temperature -10°C to +50°C, humidity 35% to 85% RH
Isolation	500V AC, 10MΩ

Technical data of DO unit (digital output)

Description	Value
Output type	PNP or NPN
Output connector	4x M12 (5 pins)
Number of outputs	8 (2 outputs / connector)
Rated load voltage	24V DC
Max. load current	0.5A / connector, 2A / unit
Features	Short / open - circuit detection
Power supply voltage	24V DC class 2, 2A
Working environment	temperature -10°C to +50°C, humidity 35% to 85% RH
Isolation	500V AC, 10MΩ

High flow valve series with flow capacity up to 28 000 NI/min is suitable for fast air supply of big appliances, or higher quantity of appliances which are supplied from common distribution. Valves are pilot operated, using smaller, standard electromagnetic actuated valves ISO 5599/1. These pilot valves are designed for external supply of compressed air, however the common supply is possible, but in this case, please contact our technical dept.

This valve series contains rubber gaskets.

Series	G1"	G1 1/2"
Ports	G1"	G1 1/2"
Connection of external pressure supply port	G1/4"	
Connection of pilot (12,14) for pneumatic actuating	G1/8"	
Flow capacity [NI/min]	16 000	28 000
Working pressure [MPa]	0 to 1.0 MPa when external pilot supply is used	
Pilot pressure range [MPa]	0.2 to 0.7	
Power input [W, VA]	2.5W for DC voltage, 6/4.9VA for AC voltage (inrush/hold)	
Response time for DC voltage [ms]	60	70
Response time for AC voltage [ms]	60	70
Temperature range [°C]	medium temperature max. 50, ambient temperature -20 to +50

Notes for connecting of valve

Valves are designed for independent, external air pilot supply (port X). It is not recommended, to merge air supply for main valve and for pilot valve, because a big flow through main valve may cause serious dropping of pressure for pilot valve and malfunction may occur.

SOLENOID ACTUATED VALVES SERIES MVSC

STRÁNSKÝ A PETRŽÍK

The valve series, which replaces valves series K. The basic usable features are kept and brings some improvements such as lower wattage, comparable or bigger flow capacity and better accessibility. Valves are solenoid pilot actuated. The product range covers functions 3/2 normally closed, opened and double solenoid. Connector and coil are included in delivery.

This valve series contains rubber gaskets.

Series	MVSC 220	MVSC 300	MVSC 460
Ports	G1/4"	G3/8"	G1/2"
Flow capacity [Nl/min]	980	1905	2730
Working pressure [MPa]	0.2 to 0.8		
Power input [W, VA]	2.5W for DC voltage, 6/4.9VA for AC voltage (inrush/hold)		
Response time [ms]	30	50	50
Coil voltage tolerance	±10%		
Temperature range [°C]	ambient temperature -5 to +50		
Enclosure	IP65 with sealed and fastened connector

Size	
C220	series MVSC and MVAA 220, thread G1/4"
C300	series MVSC 300, thread G3/8"
C460	series MVSC and MVAA 460, thread G1/2"

Number of positions	
2 to 10	for 2 to 10 valves

It is possible to mount series MVSC and MVAA valves on manifold with predefined number of position. It isn't possible to add another position to created assembly - it could be necessary to replace manifold or create another manifold. If there is possibility that more valves will be needed in future, we recommend to use manifold with more positions and use blocking plates for unused positions. Valves are mounted to manifold directly - no adaptor is necessary. Valves mounted on manifold could be unmounted separately by unscrew of 2 bolts, which are accessible from top side (side with ports 2 and 4 of valves). Each separate coil must be wired with separate electrical cable.

i Manifolds with internal wiring and common 25-pin SUB-D connector are also available. These manifolds are for valves series 220 and 300. Number of stations is 3 to 12 as standard, maximum is 20. Voltage of coils is 24V DC. For more information about these manifolds, please contact our technical department.

SOLENOID ACTUATED VALVES SERIES NAF

STRÁNSKÝ A PETRŽÍK

Series of poppet seat valves 2/2 and 3/2 with indirect actuating offers all functions which you need. Normally open as well as normally closed versions are available. Due to construction, these valves are reliable and offers maximal flow capacity.

This valve series contains rubber gaskets.

SOLENOID ACTUATED VALVES SERIES MVDC

STRÁNSKÝ A PETRŽÍK

Small, direct actuated valve 3/2 or 2/2 normally closed with manual override. Valve can be used as a standalone or can be mounted together with other valves as manifold mounting. This manifold can be expanded at any time, valve and set of screws are required.

This valve series contains rubber gaskets.

Series	MVDC
Ports	G1/8" *
Flow capacity [l/min]	60
Working pressure [MPa]	0.1 to 0.7
Power input [W, VA]	2.5W for DC voltage, 6VA for AC voltage (inrush/hold)
Time response [ms]	20
Coil voltage tolerance	±10%
Temperature range [°C]	ambient temperature -5 to +50
Enclosure	IP65 with sealed and fastened connector

*)Port 3 is covered by plastic nut which is used as exhaust

Order codes

PMVDC 220 3E1 A220

Size
220 series MVDC 220, thread G1/8"

Function
2E1  2/2 normally closed
3E1  3/2 normally closed

Voltage
D12 12 V DC ± 10%
D24 24 V DC ± 10%
A220 230 V AC ± 10%, 50-60 Hz
A24 24 V AC ± 10%, 50-60 Hz

Supply contains connector(s).

Order codes of manifold screw sets

PMVDC 220 - M 1

Screw set
1 for first valve
X for next valve in manifold

The screw sets are necessary for assembly the manifold of the valves. There are two sets available - set for first valve, which contains 2 nuts and 2 short screws and set for next valve, which contains 2 long screws - the required number of sets for next valves is about one set less than the total number of valves in the assembly (for example for 4 valves in manifold, 1 set of PMVDC220-M1 and 3 sets of PMVDC220-MX are required).

Order code of bracket

PMVDC 220 - B

Bracket type
B bottom bracket

Bracket is attached to the bottom of the valve and holes for fixing of the assembly of bracket and valve are accessible from the upper side (they are next to the valve). Bracket can be used for standalone valves as well as for manifolds (for first and the last valve in manifold).

Dimensions of valve series MVDC

MANUALLY ACTUATED VALVES SERIES MVMB AND MVMC FOR PANEL MOUNTING

STRÁNSKÝ A PETRŽÍK

The new valve series, which replaces the old valve series for panel mounting with replaceable actuators. basic usable features are kept and brings some improvements such as bigger flow capacity, better accessibility and not least also better comfort during mounting and changing of actuators. Bigger actuators also brings the better user comfort during the actuating. The valves can be mounted into the panel with hole dia. 25 mm, or by using holes on the valve body. The big variability allows also changing of actuator anytime during operation - just turn off/on 2 screws on the side of valve and actuator is unlocked/locked.

This valve series contains rubber gaskets.

Series	MVMC 210	MVMB 220 3	MVMB 220 4

Lever valves are actuated by 120° lever turning. Both positions are detent. Draw bar valves are actuated by pressing the draw bar. Return to starting position is by pulling of draw bar. If the draw bar is during pulling out rotated to right, the force which is need for overcome the detent will be lower. Draw bar valves can be produced from stainless steel on request.

This valve series contains rubber gaskets.

Version with hole for securing the basic position

This valve is used to pilot high-flow directional control valves connected to machines which have a high risk of injuries to the hands. The machine operator must simultaneously operate, in a safe area, two three-way manual valves for correct operation. The safety valve will ignore a single depression of one of the manual valves. To repeat the cycle both pilot signals must be exhausted and the manual valves simultaneously actuated again.

The two-hand safety valve is sold with **CE**-certification (compliant to Machinery Directives EEC 89/392, 91/368, 93/44, 96/68 and to Norm EN 574, level 1).

This valve series contains rubber gaskets.

Ports	G1/8"
Flow capacity [Nl/min]	100
Working pressure [MPa]	0.3 to 0.8
Temperature range [°C]	-10 to +60
Max. delay between two actuating signals [s]	0.5

Weight [kg]	0.40

Order codes

Ports	G1/8"
Two hand safety valve	2899 0029 9040 0004

Max. delay between two actuating signals related to the pressure

Dimensions

Note: M5 threaded holes are for fixing the valve

Connection

This safety valve is used in applications, where controlling by two hands at a time is necessary due to safety reasons (presses and etc.). Valve is actuated only when both levers are pressed together. If one lever will be pressed permanently, valve will not be actuated when the second lever will be pressed.

This valve series contains rubber gaskets.

Ports	G1/4"

- seals - NBR
- spool - nickel plated aluminium alloy
- internal parts - brass

Flow rate

MECHANICALLY ACTUATED STEM VALVES SERIES LV7

- ROBUST DESIGN FOR HARSH CONDITIONS

STRÁNSKÝ A PETRŽÍK

The valve is controlled by pushing the stem in the direction of its axis. It is not possible to activate it by pushing the stem from the side of the valve. The valve is also suitable for smooth and slow changes, when the flow rate is smoothly regulated by pushing on the stem. In the middle of the stroke of the stem, the air flow from the inlet is closed (it does not pass to outlet 2 or outlet 4). In addition to the standard version, a stem valve with an extended spring stroke is also available, where after activating the valve, the stem can be pressed in by another 5 mm without damaging the valve.

This variant can be used advantageously for cams that do not move accurately.

Valves series LV7 contains spool and sleeve assembly, which guarantee long lifetime of valve.

Series	LV7
Ports	G1/4"
Flow capacity [Nl/min]	1700
Working pressure [MPa]	vacuum to 2,1
Actuating force [N]	min. 30, max. 300
Temperature range [°C]	medium temperature max. 50, ambient temperature -20 to +50
Weight [kg]	0,42

Order codes

Type	Order code
Valve 5/2	2000 2521 0000 0000
Valve 5/2 with extended stroke	2000 2544 1000 0000

To fully activate the valve, the stem must be pushed in by 5 mm. In the extended stroke version, the stem can be pushed in by another 5 mm without affecting the function.

Dimensions

Construction / materials

- body - aluminium alloy
- caps - aluminium alloy, technopolymer
- springs - stainless steel
- seals - Viton®
- spool and internal parts - stainless steel

For more information about spool and sleeve assembly see page 5-2.

Valves are actuated by rolling the cam from the one or another side of the valve body. There are 3/2 normally closed and 5/2 valves available.

This valve series contains rubber gaskets.

Ports	G1/8"
Flow capacity [NL/min]	550
Working pressure [MPa]	vacuum to 1.0
Actuating force [N]	10
Temperature range [°C]	-20 to +60

- lever - zinc plated steel
- roller - bearing

Flow rate

STRÁNSKÝ A PETRŽÍK

Valves are actuated by rolling the cam from the one or another side of the valve body. The cam must go over the roller and release it. During the cam return, the roller will not activate the valve. Those valves are used in pneumatic controlled circuits and everywhere where only one signal about movement is necessary. There are 3/2 normally closed and 5/2 valves available.

This valve series contains rubber gaskets.

Ports	G1/8"
Flow capacity [Nl/min]	550
Working pressure [MPa]	vacuum to 1.0

- lever - zinc plated steel
- roller - bearing

Flow rate

The valves are activated after the cam is driven from one or the other side of the valve. The valve is also suitable for smooth and slow changes, when pressing on the roller results in smooth flow regulation. In the middle of the roller stroke, the air flow from the inlet is closed (it does not pass to outlet 2 or outlet 4). In addition to the standard version, a roller with an extended spring-loaded stroke is also available, where after activating the valve, the roller can be pressed in by another 11 mm without damaging the distributor. This variant can be used advantageously with cams that do not drive precisely.

Valves series LV7 contains spool and sleeve assembly, which guarantee long lifetime of valve.

Series	LV7
Ports	G1/4"
Flow capacity [NI/min]	1700
Working pressure [MPa]	vacuum to 2,1

PNEUMATICALLY ACTUATED VALVES
SERIES K

A new type of pneumatically actuated valve, which offers not only a large flow rate, but also high durability. Valves can be used as standalone or they can be mounted on manifolds.

Valves series K contains spool and sleeve assembly, which guarantee long lifetime of valve.

We make the spool and sleeve assembly from hardened stainless steel. The technical interest is that thanks to the precise grinding and honing of both parts, such accuracy is achieved that the piston in the sleeve moves on the air cushion. This essentially eliminates possible wear and at the same time the piston can be moved very easily and very quickly. The clearance is so small that there are no leaks even without a seal. For more information on spool and sleeve assembly, see page 5-2.

Series K valves manifold assembly

Series	Order code	Weight [kg]	Application
K1	2500 8181 0600 0003	0.26	End plates (1 pair) for 2 valves
K1	2500 8181 0600 0002	0.08	Middle plate (extension for 1 valve)
K1	2500 8181 0600 0001	0.02	Adaptor plate (1 plate per station)
K1	2500 8181 0600 0004	0.04	Blank station plate
K2	2500 8181 0800 0001	0.29	End plates (1 pair) for 2 valves
K2	2500 8181 0800 0002	0.11	Middle plate (extension for 1 valve)
K2	2500 8181 0800 0003	0.04	Adaptor plate (1 plate per station)
K2	2500 8181 0800 0005	0.07	Blank station plate

Manifolds for K series valves are supplied separately and it is necessary to use one pair of end plates, which are also used as manifolds for 2 valves, and requested number of middle plates (1 plate for 1 valve) to create the complete manifold assembly. It is possible to add other positions to the assembly at any time, just remove the end plate and add additional middle plates. If it is necessary to create a reserve during assembly, it is recommended to use a blank station plate, which can be easily replaced by valve. Max. number of valves in one manifold is 10. Any valve series K may be used for manifold assembly (it doesn't matter if valve is single or double solenoid actuated or air actuated). But it is necessary to use adaptor, which must be mounted between valve and manifold. Valves mounted on manifold could be unmounted separately by unscrew of 2 bolts, which are accessible from top side (side with ports 2 and 4 of valves).

Series	A	B	C	D	E	F	G	H	I	J	K	L	N

HIGH FLOW PNEUMATICALLY ACTUATED VALVES

STRÁNSKÝ A PETRŽÍK

High flow valve series with flow capacity up to 28 000 NI/min is suitable for fast air supply of big appliances, or higher quantity of appliances which are supplied from common distribution. Valves are pilot operated, using smaller, standard pneumatic actuated valves ISO 5599/1. These pilot valves are designed for external supply of compressed air, however the common supply is possible, but in this case, please contact our technical dept.

This valve series contains rubber gaskets.

Series	G1"	G1 ½"
Ports	G1"	G1 ½"
Connection of external pressure supply port	G1/4"	
Connection of pilot (12,14) for pneumatic actuating	G1/8"	
Flow capacity [NI/min]	16 000	28 000
Working pressure [MPa]	0 to 1.0 MPa when external pilot supply is used	
Pilot pressure range [MPa]	0.2 to 0.7	
Temperature range [°C]	medium temperature max. 50, ambient temperature -20 to +50

Notes for connecting of valve

Valves are designed for independent, external air pilot supply (port X). It is not recommended, to merge air supply for main valve and for pilot valve, because a big flow through main valve may cause serious dropping of pressure for pilot valve and malfunction may occur.

PNEUMATICALLY ACTUATED FLIP-FLOP VALVE

STRÁNSKÝ A PETRŽÍK

The pneumatically actuated valve automatically switches positions after applying a short signal to the control port marked X. After applying pressure to the control port, the position of the valve switches and if there is a pneumatic cylinder connected to the output, for example, it will extend. The signal can be short, or it can last for a long time. The moment of signal introduction is important. As soon as the pressure of the control signal is exhausted - the signal is interrupted, the valve is ready for switching. After pressure is applied again to the control port, the valve will switch and the cylinder will begin to retract. In this way, the valve can be reversed using a single control signal. The valve can also be switched manually in the event of a control signal failure. The control signal is independent of the working supply and can have a different pressure.

This valve series contains rubber gaskets.

Ports	G1/4"

Working pressure [MPa]	0.3	0.4	0.5	0.6	0.7	0.8	0.9	1.0
Switching pressure [MPa]	0.03	0.05	0.065	0.09	0.10	0.12	0.14	0.16

Threshold sensor can detect a pressure drop and signal it with a command signal (s). This component turns out to be especially useful when assembled directly on the cylinder. When the piston completes its stroke (no more counter pressure available in the cylinder), a command signal is given out to a direction valve to have the piston change the stroke. Sole condition required for perfect component performance is that the piston has to complete its stroke. No intermediate positions are allowed. Major advantage of this component is to command the piston stroke changes without electrical connections.

Cylinder is retracted, signal S1 is active, S2 is inactive.

Cylinder is thrusting, both signals S1 and S2 are inactive.

Cylinder is thrust, signal S1 is inactive, S2 is active.

Working pressure	0.3 to 1.0 MPa
Temperature range	0°C to +70°C
Working medium	modified compressed air

Pressure indicator

Order codes	Colour	Thread	Weight [kg]
2899 0020 3060 0003	red	G1/4"	0.053
2899 0020 3060 0004	yellow	G1/4"	0.053
2899 0020 3060 0005	green	G1/4"	0.053
2899 0020 3060 0006	blue	G1/4"	0.053

Pressure indicator is used for visual display, if there is a pressure in the circuit. Indicator doesn't show the value of a pressure, but only if there is or isn't pressure. In case, that there is a pressure, the colour disk is visible in the dome, with visibility of 180°.

Working pressure	0.2 to 1.0 MPa
Temperature range	0°C to +60°C
Working medium	modified compressed air

VALVE FOR SIGNAL START DELAY VALVE FOR LIMITING THE SIGNAL LENGTH

STRÁNSKÝ A PETRŽÍK

Valve for signal start delay

Order code	Delay range [s]	Thread	Weight [kg]
2532 7090 0400 0006	0 to 5	G1/8"	0.11

This device, if air is supplied at port 1, lets the air go out from port 2 when the adjustable dwell time (pre-set by screw R) has elapsed. The air flow can then be interrupted by removing the air supply from port 1. The difference from the normally open version (see below) is that the screw R adjusts the dwell time and not the duration of the air impulse.

Valve for limiting the signal length

Order code	Signal length range [s]	Thread	Weight [kg]
2532 7090 0400 0005	0 to 5	G1/8"	0.11

It is a device which produces an adjustable impulse of fixed duration by adjusting screw (R). When a signal is applied from a three way valve and maintained at port 1 the impulse generator is activated and will generate an impulse period which was pre-set by screw R. If the signal is interrupted the duration of the impulse is terminated. To repeat the cycle the pilot signal must be exhausted and applied again.

Working pressure	0.2 to 1.0 MPa
Temperature range	0°C to +60°C
Working medium	modified compressed air

Notice: dimensions are the same for both valves - valve for signal start delay and valve for shorten the signal length.

Caution

- If the air supply line contains drain or particulate, etc., the primary pressure fixed throttle can become clogged leading to malfunction, and therefore, be sure to use an air filter (MAF or MAM*) & mist separator.
- Never use a lubricator on the primary side of the regulator, as this will positively cause the fixed throttle to become clogged and result in a malfunction. If lubrication is required for terminal devices, connect a lubricator on the secondary side.
- When to be during maintenance, first reduce the precision regulator set pressure to zero, and completely shut off the supply pressure.
- If a directional switching valve (solenoid valve, mechanical valve, etc.) is mounted on the primary side of the the precision regulator and repeatedly switched ON and OFF, wear of the nozzle/diaphragm section will be accelerated and a discrepancy in the setting value may occur. Therefore, avoid using a directional switching valve on the primary side. In the event a directional switching valve will be used, install it on the secondary side of the precision regulator.

Flow capacity

FILTERS SERIES MAF302, MAF401, AND MAF501

STRÁNSKÝ A PETRŽÍK

Primary air particulate filters are designed to separate liquid, water, rust, pipe scale, and debris from air lines. They should be installed upstream of the regulator and/or lubricator to prevent contamination from reaching other components.

Series 401 has got metal bowl with sight glass and series 302 and 501 have got polycarbonate or nylon bowl with plastic guard or metal bowl.

COALESCING FILTERS SERIES MAF302, MAF401 AND MAF501

STRÁNSKÝ A PETRŽÍK

The coalescing filter is utilized when either clean air is required or longer component life is desired. This type of filter removes water and oil aerosols. It works differently than the particulate filter; dirty air enters the element from the centre and passes through a field of glass fibres which cause the aerosols to form into droplets which are heavier than the surrounding air. The droplets grow larger as they pass through the element and gravity causes the oil drops to drain to the sump of the bowl. By removing the harmful oil varnishes and contaminant that attack seals and gaskets, the valve or cylinder is much less likely to stick. To maximize the life of a coalescing filter it should always be used after a 5 micron particulate filter. Series 401 has got metal bowl with sight glass and series 302 and 501 have got polycarbonate, nylon or metal bowl.

A range of fine filters designed primarily as main filters in compressed air supply systems. The filter cartridges have up to 98% pore volume, which ensures long service life and low operating costs. Thanks to the folded design of the filter media, the cartridge provides a significantly larger filtration area than a conventional cylindrical filter. This means a higher dirt retention capacity, lower pressure losses and thus more economical operation. The internal and external stainless steel reinforcements of the filter cartridge protect the filter media and form a mechanical pre-filter, which increases the efficiency of dirt separation.

T	1 µm (TU)
A	0,01 µm (AH)
H	act. carbon (HC)

Thread size	
NF1Ex1	R1/2" (10F) & R3/4" (15F)
NF2Ex1	R1" (25F) & R1 1/2" (40F)
NF3Ex1	R1 1/2" (60F)
NF4Ex1	R2" (100F)
NL1Ex1	R2 1/2" (150F)

Inlet pressure must be considered when determining the appropriate size. Please see the following page for details.

MJF series filters have R pipe threads!

The CP, TU and AH filter elements must be replaced every 12 months or when the contamination indicator is in the red field. The HC filter element must be replaced after 1000 hours of operation.

When the filter element is dirty (the differential pressure gauge indicator is in the red field), the pressure difference is at least 0,06 MPa.

150F	R2 1/2"	163	1017	55	900	200

Filter size selection

- To correctly select the filter size, it is necessary to base it on the lowest inlet pressure and the highest expected flow rate.
1. Determine the value of the minimum working (inlet) pressure (e.g. 0,55 MPa) and the maximum compressed air flow rate (e.g. 5 Nm³/min) at the filter inlet.
 2. Select the conversion factor corresponding to the minimum inlet pressure from the table below (always round the pressure down, e.g. for 0,45 MPa, use the correction factor 1,54 (value for 0,4 MPa)).
 3. Calculate the minimum filtration capacity by multiplying the required flow rate by the conversion factor (e.g. 5 * 1,54 = 7,7)
 4. Select the filter model using the minimum filtration capacity value (the selected filter must have a flow rate equal to or greater than the calculated minimum filtration capacity). So for our example we cannot choose size 40F which would correspond to the required flow rate of 5 Nm³/min, but we must choose size 60F which corresponds to the calculated minimum filtration capacity of 7,7 Nm³/min.

Inlet pressure [MPa]	0,1	0,2	0,3	0,4	0,5	0,6	0,7	0,8	0,9	1,0	1,1	1,2	1,3	1,4	1,5	1,6
Conversion factor	4,00	2,63	2,00	1,54	1,33	1,14	1,00	0,88	0,80	0,72	0,67	0,61	0,57	0,53	0,50	0,47

Example of use

The TU cartridge filter is installed after the desiccant air dryer to remove mechanical impurities from the dryer. However, it must be connected in reverse and automatic drain is not required.

The HC cartridge filter is used to remove oil mist and odors. Automatic drain and differential pressure gauge are not required.

Soft start-up valve is used everywhere, where items in line behind the valve should be secured against intense pressure rise after connection to air supply, as is common when hand valve or quick connect couplings are used. When the valve is energized or manually operated, output pressure will increase gradually with flow rate, which can be adjusted. After specific pressure (see chart) is reached, full pressure and flow is switched to output. When the valve is de-energized or switched off manually, input is closed and air from the line will be quickly exhausted.

Port size	G1/2"
Flow at 0,7 MPa ($\Delta p=0,03\text{MPa}$) [Nl/min]	3000 in direction 1(P)→2(A); 3800 in direction 2(A)→3(R)
Primary pressure [MPa]	0,25 to 1,0

A220	230 V AC $\pm 10\%$, 50-60 Hz
A24	24 V AC $\pm 10\%$, 50-60 Hz

Connector	
	standard
L	with LED

Valve can be used standalone, or should be attached using connection plate (order code PMACP401-C) with other units of series 401.

The total effective orifice of piping and components on the P port side must be equal or larger than 35 mm². When the air current is restricted or insufficient pressure, the main valve will not function / switch normally and it could cause air to leak from the R port.

ELECTRO-PNEUMATIC REGULATOR SERIES MAER200

STRÁNSKÝ A PETRŽÍK

The electro-pneumatic regulator is used for continuous electronic regulation of the output pressure based on the voltage or current input signal. The outlet pressure can therefore be dynamically adapted to the requirements of the application. The valve is also equipped with an output that can be further processed. High accuracy is achieved thanks to the integrated processor and PID control. The maximum flow at an inlet pressure of 1 MPa and an outlet pressure of 0,6 MPa is up to 1500 Nl/min.

A model controlled by RS-232 / RS-485 with Modbus protocol is also available. For more information, contact the technical department.

SHUTOFF VALVE SERIES MVHR302 AND MVHR400

STRÁNSKÝ A PETRŽÍK

Shutoff valve is an easy and inexpensive way to add shutoff capability to an FRL unit. It allows the air supply to be closed and MVHR models can be operated either manually or by a solenoid valve. When the supply is closed, the compressed air is exhausted from the circuit behind the valve. Both positions of the manually operated model can be locked (padlock not included), which will contribute to safety during maintenance or adjustment. The valve is designed to be assembled with other air conditioning elements (using the couplings) or can be used separately. Size 302 is suitable for all elements of the MA**302 series, size 400 is then for MA**401 and MA**403.

Port size	MVHR302			MVHR400

Valve with digital condensation removal timer

Valve for automatic condensation removal is used for draining of pressure tank or big filters. Main advantages are enclosure IP65, compact design a digital timer with easy operation.

Order codes

PMBS 03 3N3 A220 T

Thread		Voltage	
03	G1/8"	A220	230 V AC ± 8%, 50-60 Hz
06	G1/4"		

Time adjustment:

- press SET for 2 seconds
- press ADJ to adjust ON time
- press SET
- press ADJ to adjust OFF time seconds
- press SET
- press ADJ to adjust OFF time minutes
- press SET

Note: for manual override press both keys for 2 seconds.

Panel mounting adapter with protective cover PA-D

The gauge display is off by default. If you want to display the current pressure, just press the button and the measured value will be displayed for 60 seconds. Then the display goes off again.

Digital pressure switch, type MP45 with threads G1/8" and M5

Description	Value
Rated pressure range [MPa]	0,00 to 1,00
Thread	G1/8" external and M5 internal
Max. pressure [MPa]	1,5
Working medium	air, non-corrosive gases, incombustible gases
Supply voltage [V]	12 to 24, DC ($\pm 10\%$)
Current consumption [mA]	≤ 40 (no load)
Comparative output	2x PNP/NPN output, current max. 125 mA, voltage max. 24V DC, residual voltage 1,5V
Comparative output indication	orange indicator for both outputs
Analog voltage output	output voltage 1 to 5 V $\pm 2,5\%$, linearity $\pm 1\%$ F.S., output impedance approx. 1 k Ω
Analog current output	output current 4 to 20 mA $\pm 2,5\%$, linearity $\pm 1\%$ F.S., load impedance: min. 50 Ω , max. 250 Ω at 12 V, max. 600 Ω at 24 V
Units and resolution	MPa: 0,001, bar/ kgf/cm ² : 0,01, PSI: 0,1
Hysteresis	adjustable, 1 digit or fixed in comparator mode
Repeatability	$\pm 0,2\%$ F.S. ± 1 digit
Indicator accuracy	$\pm 2\%$ F.S. ± 1 digit (at 25 ± 3 °C)
Temperature characteristic	$\pm 2,5\%$ F.S. of detected pressure (25 °C) at range $0 - 50$ °C
Response time [ms]	adjustable 2.5 to 1500 in 7 steps
Short circuit protection	integrated
Display	3 ½ digits, 7 segments, red/green, sampling rate 5x per second
Enclosure	IP65
Ambient temperature range [°C]	0 to +50 (no condensation or freezing), storage: -10 to +60
Ambient humidity [%]	35 to 85
Cable	5-wire, section 0,15 mm ² , length 2m, removable
Weight [kg]	0,086

Dimensions

Connection

Note:

See page 3-3 for cables with connector

Connector wiring

- 1-brown (+)
- 3-blue (-)
- 4-black (output)

Installation, setting

- When mounting, always use the wrench on the metallic area near the pressure port. Never apply a wrench to the plastic body, it will damage the sensor
- Use the pressure setting trimmer to set „ON“ pressure. Rotate clockwise to increase pressure setpoint. Rotate counter-clockwise to decrease pressure setpoint

Pressure switch PS31

Description	Value
Housing material	brass (u NPS3120234 passivated steel)
Diaphragm	FKM (Viton®)
Working medium	air, water, mineral hydraulic oil and other
Electric contacts	silver plated
Max. switched voltage [V]	250, 50-60 Hz
Max. switched current [A]	2 for ohmic load, 0,5 for inductive load
Max. fluid temperature [°C]	120
Anticipated min. cycles	1 million
Enclosure rating	IP00 without connector IP54 resp. IP65 with connector
Weight [kg]	0,07

Pneumatic oil

This oil is used for lubrication of compressed air in pneumatic systems for fail-safe operation. It is specially blended oil with good features such as foamless, no aggression to sealing, balanced viscosity gives you an advantage. Oil is atomized into the compressed air in lubricators.

Temperature range: -20°C to +80°C

Order codes	Package volume
2995 0101 0000 0000	1 liter
2995 0105 0000 0000	5 liters

Grease SAP-FML2A for pneumatic components

This grease is used for renovation or creation of permanent fat filling with very long lifetime for using with non-lubricated air. All pneumatic items are greased with this grease by default. Grease has very good water resistance, good stability, excellent mechanical stability and is oxidation resistant.

Temperature range: -30°C to +120°C

Order codes	Package content
2995 1004 0000 0000	400 g

Grease for pneumatic components for high temperature usage

This grease is used for renovation or creation of permanent fat filling with very long lifetime for using in high temperatures up to 200°C.

Temperature range: -50°C to +180 (200)°C

Order codes	Package content
2995 1101 0000 0000	100 g
2995 1110 0000 0000	1000 g

Grease with PTFE-Teflon for guides

It is plastic grease filled with PTFE-Teflon, which is used for greasing of various sliding and guiding surfaces on stressed places of machines. This grease is not used for greasing of internal parts of pneumatic items. For lubricating of internal parts of pneumatic components please use pneumatic oil or grease for pneumatic components.

Temperature range: -30°C to +120 (140)°C

Hydraulic speed control is suitable for applications, where constant speed of feed is necessary, e.g. for feed during drilling, where feed speed balances due to variable material resistance when pneumatic cylinder is used only. The advantage is continual speed setting and maintenance-free operation.

Series	NU-V
Speed range [m/min]	0.015 to 15 or 12 to 40, continual speed setting
Temperature range [°C]	-20 to +80

Order codes

Order code consist of **series description**, **type** (1. part - see table) and **speed range** (2. part - see table), eventually indication of speed control with stop cap. If you need the speed control with stop cap, add „-A“ after complete order code. The stop cap couldn't be mounted additionally as accessories, because by mounting of stop cap the stroke of speed control will be smaller. That is why the stop cap must be ordered together with speed control to ensure that piston rod will be extended for stop cap.

Example: speed control for speed range 0.015 to 15 with stroke 100 mm has order code NU-V50-2

PUSH-IN FITTINGS - NICKEL PLATED BRASS

STRÁNSKÝ A PETRŽÍK

Technical data:

Max. pressure: vacuum to 1.8 MPa

Temperature range: -20°C to +80°C

Materials: body, bush - nickel plated brass, release sleeve - POM, clamping ring - stainless steel, seals - NBR (nylon sealing rings for banjo bolt)

Medium: air, liquids and gases according to compatibility with fitting and tube materials

Suitable for tubes: PA6, PA11, PU, PE, PTFE

When inserting PU and PTFE tubes it is recommended to press release sleeve to protect tube before scratching and possible inner sealing ring damage.

Straight incl. sealing ring

*) This item has another design and/or colour and different technical data

PUSH-IN FITTINGS - PLASTIC

STRÁNSKÝ A PETRŽÍK

Technical data:

Working pressure: vacuum to 1.0 MPa

Temperature range: -20°C to +60°C

Materials: body - PBT, thread - nickel plated brass, release sleeve - POM, clamping ring - stainless steel, seals - NBR, bush - ZnDc

Medium: air

Suitable for tubes: PA6, PU

When inserting PU tubes it is recommended to press release sleeve to protect tube before scratching and possible inner sealing ring damage.

Technical data:

Max. pressure: 1.6 MPa

Temperature range: -20°C to +150°C

Materials: body, bush, release sleeve, clamping ring - stainless steel AISI 316L, seals - FKM

Medium: air, liquids and gases according to compatibility with fitting and tube materials

Suitable for tubes: PA6, PA11, PU, PTFE

When inserting PU and PTFE tubes it is recommended to press release sleeve to protect tube before scratching and possible inner sealing ring damage.

Technical data:

Working pressure: vacuum to 1.5 MPa

Temperature range: -18°C to +70°C

Material: nickel plated brass

Medium: air, liquids and gases according to compatibility with fitting and tube materials

Suitable for tubes: PA6, PA11, PU, PE, PTFE

The sealing ring is not included (unless otherwise stated) and must be ordered separately - see page 10-8.

A ... length in idle condition

L ... working length

C ... spiral diameter

Values in table are mentioned in mm.

Other tube colors are available on request. Add the code for the desired color at the end of the order

code: -B ... black -R ... red
-O ... orange -T ... transparent
-Y ... yellow

We recommend to use straight push-on fittings with tube guard for spiral tubes.
See page 10-7.

Spiral tube PA6 polyamide

Technical data:

Standard tube color is blue.

Temperature range: -20°C to +90°C

With temperature the pressure changes as follows:

-20°C	0°C	20°C	40°C	60°C	80°C	90°C
180%	140%	100%	70%	50%	45%	38%

Outside diameter Ø D mm	Inside diameter Ø D mm	Spiral diameter	Max. pressure at 20°C [MPa]	Order codes
6	4	72	3.0	3010 1006 0400 0010
8	6	96	2.1	3010 1008 0600 0010
10	8	120	1.7	3010 1010 0800 0010
12	10	144	1.3	3010 1012 1000 0010

The length of the coil hose is specified in the unfolded state. The working length is maximum 1/2 length (0.3 to 0.4 times recommended) of the unfolded state. The maximum possible length is 30 m in the unfolded state. Tubes can be connected for longer lengths.

We recommend to use straight push-on fittings with tube guard for spiral tubes. See page 10-7.

Tube PE-LD polyethylene

Technical data:

Temperature range: -5°C to +40°C

The tube is only suitable for low air pressure applications.

Outside diameter Ø D mm	Inside diameter Ø D mm	Min. bending radius	Max. pressure at 20°C [MPa]	Order codes - color	
				transparent	blue

35	25	300	2.0	3090 0035 2500 0020

Multipurpose flexible tube with high resistance to weathering, many chemicals, higher temperatures and sunlight. It is particularly suitable as a main supply of unlubricated compressed air or for backbone distributions in individual applications. It is also used to supply air to cylinders of larger diameters.

Tube PU polyurethan antistatic

Technical data:
Standard tube color is black.
Temperature range: -30°C to +80°C.
The length in the package is 50 m.

Outside diameter Ø D mm	Inside diameter Ø d mm	Min. bending radius	Max. pressure at 20°C [MPa]	Order codes
4	2,5	9	3,4	PUN 4X2,5 ANTISTAT

12	100%	73%	68%	54%	55%	41%	40%

Electrically conductive special tubes are used where it is necessary to prevent the formation of a static electric charge. They are used mainly in the production of electronic components, in paint shops, in environments with a risk of explosion, in mining. The tubes are made of polyether polyurethane, are highly antistatic, have a surface resistance of <10⁶Ω and have very good UV resistance. The tube can also be used for vacuum, while the minimum bending radius must be increased by approx. 20%. If the tube is used in environments with a risk of explosion, it is necessary to observe the conductivity of the entire system, i.e. use metal fittings with metal sealing rings.

Notice

More information such as safety instructions and manufacturer's declaration can be found on our website www.sappv.cz/r/f12e

Metal protective tube

Outside diameter Ø D mm	Inside diameter Ø d mm	Suitable for tube diameter Ø D/d mm	Order codes

21	18	15/12	3080 0015 0000 0000

Metal protective tubes are used where external influences could damage the surface of plastic tubes, for example:

- spark protection during welding
- protection against flying chips during machining
- crush protection, etc.

Material: galvanized steel

Rotary coupling

Working pressure	0.6 MPa
Min. pressure	0 MPa
Max. pressure	1.0 MPa
Temperature range	-20°C to +80°C
Working medium	modified compressed air
Cross section	DN 6 for G 1/8", DN 12 for G 3/8"
Working revolutions	0 to 120 rpm, both directions

Materials

- body: dural, hard anodized
- shaft: stainless steel 1.4021
- gaskets: NBR

For dimensions, check our website sappv.cz/r/f16e

Technical data:

Max. pressure: vacuum to 1.6 MPa

Temperature range: -15°C to +65°C

Tube material: aluminium alloy EN AW 6060, powder coating

Coupling material: HR-polymer PA6, seals NBR

Medium: air, liquids and gases according to compatibility with fitting and tube materials

The QUICK LINE distribution system brings a number of advantages in the solution of compressed air distribution. It is a system of quality materials with excellent resistance to corrosion and shocks, which can be implemented quickly, efficiently and without the need to purchase other equipment. It can be used to implement complex distributions, thanks to a wide range of different sizes and distribution elements.

Technical parameters, dimensions, instructions, examples of implementations, and other information can be found on our website at sappv.cz/r/f17e

i The connections marked * have even a hidden threaded hole G1/4", which is normally blinded and which can then be used to drain condensate.

Electric actuators rectilinear with ball screw, 1E1 series, ISO 15552.	11-2
Electric actuators with a ball screw without motor, MEQI series, ISO 15552.	11-6
Electric actuators with belt drive without motor, METB series.	11-7

LINEAR ELECTRIC ACTUATORS WITH BALL SCREW SERIES 1E1 ISO 15552

STRÁNSKÝ A PETRŽÍK

The electric actuator is designed on the principle of converting rotary motion to rectilinear by means of a ball screw and a nut. Piston rod of the electric actuator is locked against accidental rotation. Radial load must correspond to the permitted values according to the charts. If load exceeds the permissible values, it must be secured by external guiding means. Profile of the pipe allows attachment of proximity switches using T-grooves. The wall for the use of proximity switches is marked on the dimensional drawings, and this surface can be oriented differently on request. The complete electric actuator offers precise positioning, defining of precise travel speeds, acting with precise force and the like. Compared to pneumatic cylinders, the electric actuator offers an increase in accuracy in all the listed physical parameters and it does not require an additional drive medium (compressed air), it is sufficient only with electrical energy. The mentioned electric actuators can even work at very low speeds, or can maintain the load for a limited time even in a static position.

Model	1E1 50	
	direct connection	side connection
Positioning repeatability [mm]	0,02	
Minimum step of travel [mm]	0,1	
Ball screw lead [mm]	5	
Ball screw [mm]	C7 Ø16	
Maximum speed [mm.s ⁻¹]	100	
Maximum thrust force [N]	1400	
Gear ratio	1:3,6	
Maximum motor output [W]	200	
Maximum motor rotational speed [rpm]	3000, 4000 for a short time	
Motor voltage [V]	24	
Maximum continuous current [A]	5	
Recommended minimum power source [W]	200	
Stroke [mm]	50 to 800	100 to 800
Weight 0 mm stroke [kg]	5,3	7,1
Weight add. per 1 mm stroke [kg]	0,008	
Recommended proximity switch	KT-50, RZT7, MZT8

11 Construction / materials

- caps: dural, anodized
- body: drawn dural profile, anodized
- piston rod: grounded round steel bar CK45 with hard chrome plated surface

For the variant without a motor, it is necessary to contact our technical department in order to design the corresponding connection flange for the intended type and size of the motor.

For information on the electrical circuit, control and programming, please contact our technical department.

Static and dynamic characteristics

Dependence of force on current at speed $v = 30 \text{ mm.s}^{-1}$

Dependence of the force on the speed at a current of $I = 3 \text{ A}$

Dependence of permissible force on stroke

Maximum permissible side load depending on the stroke at maximum extension

Control unit

The integrated control unit can work completely independently after connecting to a power source. It is possible to program up to 200 program steps, in which you can easily control speeds, absolute and relative positioning, set the output, work with 5 inputs, compare values and branch the program according to the result of the comparison. It is possible to communicate with the unit via the RS485 bus, which can be connected, for example, to the USB port of a computer using a converter. An application for communication with the unit is available for the Windows operating system, which can be used to easily control the unit, set its parameters and create or modify the program. RS232 bus can be used for simple continuous display of unit status.

ELECTRIC ACTUATORS WITH BALL SCREW WITHOUT MOTOR MEQI SERIES ISO 15552

STRÁNSKÝ A PETRŽÍK

Main advantages:

- without motor - preferred type can be used - servo or stepper motor
- sliding out piston rod with anti-rotation lock
- integrated slide guide
- two motor position options
- ideal as a pneumatic cylinder replacement due to the same mounting dimensions, according to ISO 15552

Model	MEQI 50			MEQI 63		
Positioning repeatability [mm]	± 0.02			± 0.02		
Ball screw lead [mm]	5	10	20	5	10	20
Maximum speed [mm.s ⁻¹] for servo motor / for stepper motor	250 / 125	500 / 250	1000 / 500	250 / 125	500 / 250	1000 / 500
Horizontal work load [kg]* for servomotor	110	88	40	110	88	40
Vertical work load [kg]* for servomotor	33	22	10	33	22	10
Rated thrust [N] for servomotor / for stepper motor	1560 / 1120	780 / 560	390 / 280	1560 / 1120	780 / 560	390 / 280
Possible stroke [mm]	100 to 600, multiples of 50			100 to 800, multiples of 50		
Ball screw [mm]	C7 Ø16			C7 Ø20		
Anti-rotation tolerance [°]	± 0.4			± 0.4		

*) An external guide is necessary to support the load. The operating speed under work load is less than maximum speed.

Order codes

P MEQI - 50 L05 - 200 - BC - M40 B - A2 D

Model		Ball screw lead		Motor position		Motor brand		Brake		Limit sensor		
50	MEQI 50	05	5 mm	BC	in axes 	M40	Mitsubishi, servo 400W		no brake		no sensor

P	PNP

Rod bending offset under radial load

i Common accessories for pneumatic cylinders according to the ISO 15552 standard can be mounted on the actuator. See page 1-3.

The actuator profile is symmetrical and closed.

i Technical parameters, dimensions and other information can be found on our website sappv.cz/r/x02e

This universal actuator with toothed belt transmission is designed for individual automation. Connect the actuator to the control unit you are used to and you get an electric linear actuator with a wide range of applications. The cover strip is made of stainless steel and the carriage has a seal against the ingress of dirt into the interior. Standard position sensors can be used with this actuator to obtain feedback for further control.

Operating temperature	-5°C to +50°C

*) Applies only to the connections M12, M16 and M19

Motor connection

F - female shaft

M - male shaft

D - double male shaft

Features

- transmission of movement by ATL5 toothed belt
- integrated guide with two guide blocks
- body is from drawn duralumin profile, hard anodized
- stainless steel protection band

Technical parameters, dimensions and other information can be found on our website sappv.cz/r/x03e

Sensor switch installation

For models METB-42 and 55, the sensor is attached directly to the actuator body, for model METB-80, it is necessary to use an adapter with order code PETB80-3.
